This seems to be a widespread problem with the 92 from what I've read so far. That said, would Radio Shack/GRE be inclined to find a fix for the problem and "make good" on the sale or are we just s.o.l.?

By that's not a rhetorical question. By no means am I trying to start another "RS Sucks" thread. I'd like to hear from Rich and Bob and those who've had some "real" insider experience with this type of thing.

PCR-1000 and Trunker:

How to Trunk track with the Icom PCR-1000

Jan 1999

Over the Christmas holiday I decided to do something useful for once.
After that thought passed I just went ahead and played with my radios.
But one of the most interesting users has gone over to a trunked system,
and while I LOVE my PCR-1000 I was thinking I might also pick up another
scanner of some sort to follow the Metropolitan Police 'MetRadio'
Motorola trunked system on 450 - 453MHz, if such a thing existed...
While doing research on trunked systems I came across the program
Trunker. Trunker is a public domain program that allows you to follow
Motorola Trunked systems. It uses 2 radios. One radio needs its
discriminator port connected to a "Hamcomm" data slicer (more about this
later). This radio is tuned to the digital control channel of the
trunked system. The control channel tells the radios what frequency's
to change to. It also transmits various information about each
transmission and information about the trunked system itself.
Decoding this data allows Trunker to display information about the
system and each transmission. Since this data allows Trunker to know
each frequency a conversation is on, it also allows it to tune a
computer controlled scanner to the correct frequency to follow a
conversation, this is the second radio. The latest version of Trunker
supports the PCR1000 as the scanning radio. Yes! The PCR1000 could
also be used as the data channel radio using its discriminator port.
I have done it both ways and it actually works! I began by building the
Hamcomm interface and connecting it to the PCR's discriminator port. To
my amazement it worked. I was also able to find a number of the Met's
Trunked data channels reachable in my area, by scanning for the data
channels and letting Trunker decode information about the system.
It worked great. Next I took apart my AR3000 and tapped onto it's
discriminator chip. I used the information at this page to find the
correct place:

http://www.geocities.com/SiliconValley/9880/discrim.txt

This allowed me to use the AR3000 to decode the data channel and the use the PCR as the audio scanner.
The whole thing works and it only ended up costing about 7ukp worth of parts from Tandy.
I figured I would type up how it was done so that if anyone else wanted to do it they would have everything in one place. This is a great first project if you have never build anything before and the Hamcomm interface you build is supported by many other digital mode decoders.
First, download the Trunker software and read the instructions. Read the instructions! They are well written and explain everything about the program. One place to find the latest version is here:

http://web2.airmail.net/lblant1/dfw/download.htm

Next, build the HamComm "data slicer" interface. I used the instructions found on this page:

http://web2.airmail.net/lblant1/dfw/interface.htm

I followed the plans in the coloured picture. I also chose to modify this plan slightly by tying the CTS pin (pin 8 on a 9 pin connector) to DSR (pin 6 on a 9 pin connector). This is because some programs want to see the data on CTS, while some want to see it on DSR. If you look at the black and white plan on the previous web page you will see it shows pin 6 of the 741 going to either CTS or DSR. The colour plans shows pin 6 of the 741 going to DSR. I chose to make it go the both CTS and DSR. Trunker has an environment variable that allows you to choose, some other programs do not.
Next locate a Met Police Trunked system control channel. Information on Met trunked system frequencies and group ID's can be found in various sites on the web..

You can find control frequency's by plugging in all the frequency's of the system and then checking them for a digital signal.
Once the scanner is locked on to the control channel start Trunker.
I use the following environment variables in my trackenv.txt:

```
TRACKSLICERPORT=COM1
TRACKSLICERPIN=DSR
TRACKSLICERMODE=INVERT
TRACKSCANPORT=COM4
TRACKSCAN=PCR1000
TRACKSCANBAUD=9600
TRACKSCANPARK=840.0000
```

In my example, I have my data slicer circuit connected to COM1 and the PCR1000 on COM4. You must add the TRACKSCANBAUD=9600 line to the example trackenv.txt that comes with Trunker or the PCR1000 will not work. It only seems to work at 9600. Trunker should start and begin adding Hex codes to the list, these can be converted to the correctly displayed frequencies by a conversion chart available from various sites on the web..

The field labelled "SysId" should fill itself out fairly quickly with '431e'. The field "Flavor" also should be filled out with 'Networkable', and you should see some value in the "Acc" field. Acc stands for accuracy of decoding the data channel. On the strongest cell in my area (about 10 miles away) Trunker will decode with 84% accuracy over 24 hours. Not bad. The worst accuracy is a cell the other side of London, with that I get around 60%, Trunker still tracks the calls, but the voices themselves have some static in them. Trunker considers anything over 80% high quality.
You should also start hearing conversations and seeing talk groups appear on the screen. Just follow the instructions that come with Trunker and you will be able to edit the talk groups so the Trunker will show you who is calling who.
Try it and you will like it...
Other digital mode decoding programs use the Hamcomm interface. You can find many of the popular programs here:

http://www.icon-stl.net/~toddh/hamcomm.htm

You can find decoders for MDTs, EDACs systems, POCSAG, WeFAX, SSTV and Packet radio. I have used them and the do work. Best of all they are free. The following 2 web pages should help you identify most of the popular digital modes:

http://www.gem.net/~berri/wun/files/sounds/digital_sounds.html

Good luck and enjoy!

(Compiled from various sources)

Running Trunker and data slicer on a single Com port

I have been running Trunker for some while now, using a PRO-2026 - Data Slicer combination on Com 4 for data channels and a PCR100 on Com 2 for trunk following, now this works fine on my desktop PC with 4 Com ports, but how do I run it all on a notebook PC with only 1 Com port??
Well, so I have found out.. quite easily..
Take one 9 way serial cable (9 pin male on one end and female on the other), About 12" from the male end, cut the cable in two..
Strip both ends back about 1.5", you should find 9 coloured wires plus a screen wire, strip all the wires back about .25", and with a continuity tester, trace each wire to its pin... Make a note of your findings..
Twist all the stripped wires of the same colour together and tin them with solder..
Find a 25 way male serial connector, and using the note of your findings, solder the wire pairs to the corresponding pins on the 25 way male... Mine works as follows (your mileage may vary):-

9 pin 25 pin wire colour
1 8 Brown
2 3 Red
3 2 Orange

4 20 Yellow
5 7 Green
6 6 Blue
7 4 Violet
8 5 Grey
9 22 Black
Screen Shell Screen

The 9 way female connects to the notebook PC, the 9 pin male to the PCR1000 and the 25 way male to the data slicer interface, tell Trunker that the data slicer and scanner are on Com 1, and it all works as good as gold together..

Does anyone have the pin-out (Tx, Rx, Gnd etc.) for the computer port on the 895 ? And, is there any standard 5 pin female connector that mates with it ?

Thanks,
Kevin

3952. My Pro-92 is probably going back to R.S.

Newsgroup: rec.radio.scanner
Date: 1999-11-19 00:00:00 UTC
From: Brett - N7OLQ <brett.miller_nospam_@intel.com>
Message-ID: <8147ga$cr5@news.or.intel.com>
Source record: 101990

I started out pretty excited about this radio, but as I've used it over the past few days, I get more and more frustrated at its ability to track trunked systems. The 92 has a lot of great features, but trunk tracking Motorola doesn't seem to be one of them. I'll try to verify if there is anything wrong with my unit, but I'm not holding my breath.

Reasons:
1. Sensitivity seems poor. I have a lot of scanners to compare to and the 92 just doesn't seem to be able to hold conversations. I've tried a few other duck antenna, with only marginal improvement.

2. This is probably related to #1, but this thing just does a lousy job at following a trunked conversation. The talkgroup IDs jump around so much, only Open mode works to follow a conversation. I can't use the ID HOLD feature because the radio is never sure which ID it is monitoring. In Hold mode the conversation goes in and out as the ID jumps around. Before you say this is because slow speed handshaking can't follow busy systems, let me say that one of the systems I have problems with is a local 6 channel system with only 1 active talkgroup (at night). Most of the time I see the problem, Trunker is showing no other conversations on the system.

I had the 92 hooked to a good roof mounted antenna, and the BC895XLT hooked to a rubber duck antenna on the end of a short piece of coax. I put both units in ID hold mode to listen to a drug bust operation on a distant Moto Type II system. The BC895 performed perfectly following every bit of the conversation, while the 92 hissed, faded and often 'lost' the ID of the conversation. Very frustrating. Who ever said slow speed handshake method was better at weak signal operation must have been speaking theoretically and not from using the Pro-92.

3. The lack of ID banks make it impossible to select what you want to listen to. You get it all (Open mode) or everything on the scan list (Closed mode)

4. Back light won't stay on more than 5 seconds making mobile operation at night less than enlightening :-)

5. Using NiCads, the radio gives only 1 second warning before shutting down.

6. The tiny, wobbly, non-backlit buttons are not very user friendly.

The really sad part is that there is nothing to replace this radio with! There is nothing that can do what the 92 tries to do. The BC245 is a very distant second on features, but that 5 second delay keeps me away. I guess I can still hope my radio is defective...

Anybody else seeing these same issues?

"Surface mount" components mount to the surface of the PC board. The
board has flat metal pads on the surface of the board and the component
has leads "glued" to these pads by solder. "Surface mount" is in
contrast to the older "pin through hole" packaging where the component
has pins that go through holes in the board, and are then soldered to
metal pads around the hole the other side of the board.

Surface mount devices tend to be smaller, and you can mount them to both
sides of the board without having to worry about the pins getting in
the way of each other. You also don't have the cost of having these
holes drilled through the PC board.

Possable heat related failure of some component.

If you use a wall wart rather than the line cord is the problem still
evident?

About 7-8 years back it was recommended that the radio be operated
without the power transformer as it generated excess heat which ages
delicate components.

I recommend removing the power transformer and saving the radio.

I havew several I bought back from a P.I. firm. All were
de-transformered and computer controlled. None ever required service.

I have some I bought new with transformers still in place. When I sell
one I recommend removal as a precaution and have had several buyers
request that I remove them. Never had a complaint and I warrenty my
radios.

Good Signals... LCM

> Does anyone have the pin-out (Tx, Rx, Gnd etc.) for the computer port on the
> 895 ? And, is there any standard 5 pin female connector that mates with it
> ?

The interface is a 5-pin PCB header (.025" square pins on 0.1" centers).
The mating socket is standard (RadioShack.com's Cat# 910-1471 is 25 cents,
plus 24 cents for 3 contacts), but a segment cut out of a DIP socket will
work just as well. The pinout is symmetric, with pins 1&5 (the outer ones)
carrying data in (to the radio), 2&4 are data out (from the radio), and
pin 3 is ground.

The cable connections are:

BC895 DB9 DB25
1 <= to radio 3 2
2 from radio => 2 3
3 <= ground => 5 7
(TR-CD-DSR) 4-1-6 20-8-6 *
(RTS-CTS) 7-8 4-5 *

* If you will be using a standard communication program, add the two sets
of jumpers in the RS-232 connector to simulate the normal control signals.

The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the radio
should be terminated with a C/R only.

I just got my AR8k interface. So far all the software I have found only allows input of one freq at a time, as opposed to copying in several at a time from a website. If anybody can tell me a faster way to load lots of freqs in at a time, I would appreciate it.

>freqs! It is the DJ-X10T so it shouldn't be doing this right??? I can
>hear 'em loud and clear, but I thought that these freqs should be
>blocked. Any ideas why this one isn't?"....
We also sold 2 DJ-X10T's a few months back that had happened to have direct cell freqs right out of the box. However, both customers "lost" & couldn't bring back that portion of 800 once they did a reset or used the optional software/cable set. So you may "lose" that band. By the way, Don't scan between 1420 - 1446.0 Mhz or you might hear something you shouldn't!!
HTTP://home.att.net/~advancedspec/

3981. PRO-92 or PRO-94 (it is now $199)

Those buttons control the upper and lower ends of a freq. search.
I believe you type in the lower limit of your search and then press the
lower key. You then type in the upper freq and type in the key.

Press "search" and the scanner will sear that range for you.

```
DOS PCR-1000 Control Program
============================
New version available!

This version only fixes one small bug: Delay is cancelled if scanning
is resumed on a channel with delay set.

One feature has been added: The clock has been increased in size so
that the time can be read from across the room (same size as frequency).

It might not be as flashy as that Windoze stuff, but it sure downloads a
lot faster.

The PRO-2004 cpu, radio shack part number 10910891 is still available.
It is a 64 pin DIP package, not four sided surface mount. Replacement
is still not simple and if you are not experienced with soldering
delicate circuit boards, the chance of damage is high. The PRO-2004
logic boards often had bad solder joints that took years to cause
problems so it is not clear that the cpu is bad anyway.

Help!!!
I run probe 5.0 on my toshiba 205CDS laptop(P100/40meg ram) under windows 95
to control my pro 2006/os456. Everything has worked well for months. Yesterday
I was running probe without the radio connected to move some frequencies around
(as I've done before) and seem to have gotten stuck in a loop. Probe runs just fine
but when I attempt to exit (quit) and return to windows 95 a cycle starts: Probe
exits normally, I see the toshiba boot screen, then the standard "loading windows
95" message followed by the windows logo splash screen, Then right back into
probe. Windows 95 will not come up. I can boot the machine into DOS mode
using "F4" and into windows safe mode via "F5", but can't get into windows 95. I
tried to rename Probe.exe and rebooting but that only got me a "file not found"
error. When I renamed it back to "probe.exe" it booted right back into probe. I
have removed all referenced to probe.exe from the registry and deleted the
shortcuts in windows. I reviewed the start up groups and the load and run lines ind
win.ini and/or sys.ini (whichever one). Short of deleting windows 95 and doing a
full reinstall, what other options have I missed?
Thanks to all in advance. PS: It still runs the radio just fine.

This thread gets my vote for "Weirdo-thread of the millenium!" It's got Peter Boe posting as his split personalties of Willie Arsch and Joe Henry; and they're talking to each other; Bill Conduit blathering about the usual "the aliens captured me and altered my brain" stuff and John Mackey responding to Bill Conduit's alien brain dump with his typical mumbo jumbo nonsense.

This is about absurb as the Internet can get! Happy New Year's fellahs. Let's hope that you find something more worthwhile to do with yourselves in the next 100 years because your sorry act is worn out.

I guess the least I could do is take advantage of the 30 day return policy.
But if I like it i'll certainly keep it.

Nothing like puting it to the test myself.

Heathkit GR-1132 and Patrolman PRO-7B

Both are xtal scanners and both work

Best offer as I know that the Heathkit is collectable but I am
reasonable.

They look great with th blinking lights going.

The Heathkit is very cool looking and has the 3 original telescopic
whips for each band.
This one survived very nicely.

the PRO-7B is good too but the Heath it the prize

2 Motorola MTX 9000 portables that are on the 900 mhz ham band in conventional mode.

These are the B5 models with 6 button keypad and LCD display.

1 is in good shape. The other has a bad display and the case has somenumbers carved in it.

Both work fine. I use the one with no display as a 16 channel radio by just using the numbers on the channel knob. God bless you if you can find more that 16 repeaters in your area!

I only have 1 fast charger but the batteries are late date code with spring belt clips and 1 extra battery.

$300 for everything and I will program or let you do it with my help.

I also have a Motorola Maxar trunking radio that was converted to conventional ham band use. I want $300 for it since there is a lot of work involved to convert radios to 900 mhz.

I haven't heard it myself but I heard the Inland (So Cal) CHP dispatchers talking about hearing Maryland police on their frequency. CHP in this area repeater outputs on 39.68 39.88 and 39.26 MHz with a CTCSS of 118.8 Hz. I'd be interested to hear if the skips are being heard back east.

Hi,

With the increase in Sunspot activity, I'm regularly rxing US VHF Low Band Stateside skip down here. Mainly from, AR, CA, CT, KY, PA, LA, MA, MD, NC, NH, NY, OH, PA, SC, TN, TX & VA.

For those of you who are interested. You might like to subscribe to my VHFSKIP 29-50MHz+ Listserver. Covers VHF DXing and postings of day to day loggings on Utility (Non-broadcast stations) Worldwide. Primarily in the 29-88MHz range or information relating to stations in the 29-88MHz range. For Propagation purposes postings of non-CB/Pirate/Outbander related comms in the 25-29MHz range is OK. Aswell as VHF DX reception above 88MHz.

4026. Pro92 - PC interface?

Newsgroup: rec.radio.scanner
Date: 1999-11-20 00:00:00 UTC
From: "Michael J. White" <mike.white@erols.com>
Message-ID: <817blf$li5$1@autumn.news.rcn.net>
Source record: 101858

I just bought a Pro92, really haven't used it much yet. The manual says you can interface the unit to a PC with "optional" software and a cable. My RS says that interface kit is backordered till after xmas. Any information on the protocol used, pinouts, 3rd party sw? Thanks.

4027. Re: PRO-92 or PRO-94 (it is now $199)

I have a RS Pro-2050 Trunker Tracker in good shape forsale.
Includes a/c wall adapter, manual, and original box.
I have added an RCA/phono style jack on the rear of the scanner for the descriminator tap.

Asking $125 obo pre-paid by USPS MO in advance. That price includes shipping.

Send email to dan@truvalue.com if interested.

> Does anyone like the 92?

I have an affection for it, but strong misgivings about its trunk tracking features. It is more sensitive than my AR-8200 (not saying much), has alpha tagging (though I cannot get it to display bank tag when scanning or combo bank and channel tag - as the catalog photo shows it doing - when stopped on a freq) it is a handy size and feels good in my hand. The "speed loader" battery packs are nice and are interchangeable with my PRO-43 (and PRO-30's, for that matter) The manual could be more clearly written. For one thing, it leaves one with the impression that it isn't necessary to set a fleet map block size for Type 2 Motorola systems. In fact you must set it to a value of 15, even though the manual says that the units is set to default to Type 2 systems. While this change did help in may case, it still drops some trunk groups on "hold" and displays intermittent stray ID's while continuing audio on a given talk group. It is a great scanner, but of got quite a few pretty good already; and its trunking performance still seems lacking. I will reserve final judgment, but the overall impression is one of disappointment. Certainly it is NOT what RS might have hoped it would be and from a legal standpoint is not as warranted in the promo literature.

4046. Icom R2 Antenne cut for FM radio

Newsgroup: rec.radio.scanner
Date: 1999-11-21 00:00:00 UTC
From: Soy Bomb II <mm11720@navix.net>
Message-ID: <81a928$6qc$1@iac5.navix.net>
Source record: 101694

I have a Icom R2 and a Sony minidisc portable recorder. This works great to record scanner calls. It puts a track mark between each call and one can skip from track 1 to track 2 (or track 123) just like a CD player. Downside is a max of 160 minutes record time and if there is more than 5 minutes of silence the recorder shuts down. Anyway I digress.

I want to find a antenna (portable fixed for the R2) that will pick up broadcast FM to a large degree. My car radio has no problem in this area but the factory antenna and a Comet something 3 something both dead in this area. The Comet is tuned to 900mhz. Anyway if anyone can help with a great portable scanner antenna with either an SMA or BNC connector please pass on a recommendation.

For whatever it is worth I am trying to pick up 91.5 NPR to tape CarTalk while I am at work.

Thanks, Experts

Bob

4049. Antenna Close Out

Newsgroup: rec.radio.scanner
Date: 1999-11-21 00:00:00 UTC
From: "D.R. Watkins" <drwatkins3@erols.com>
Message-ID: <81abnn$656$1@autumn.news.rcn.net>
Source record: 101697

R.S. has the base scanner antenna #20-014 on close out for $0.97. This antenna ran around $34-$35 regular cost. If you want a fairly decent performing base antenna, $0.97 is worth losing. They're going fast, I found out about them on Strong Signals.

Hi, Group!

I have a Pro-90 from RS, and I live in Williamsport, PA. While monitoring the 800 MHz trunked public safety system, the radio will display talk group ID's that, by definition, are not valid (i.e. not divisible by 16). What gives?

Hello All,
I Still Have a Icom W2A Dual Band HT for sale.
Deal fell through so here is the info again
It has box, manual, 5 month old batt,antenna,charger,and belt clip,
unit is in great shape no wear on the keypad, and no scratches on the
display, I used it more as a scanner than a two-way and in a case most
of the time.
It has extended RX and TX
I would Like $200 SHIPPED for the unit
This is a classic pre ban radio with fell 800!
I have just accumulated too many radios
and this was one of the odd ones out!
If intrested or for PIX
contact
tiny2nz@jorsm.com
Thanks Tiny

4057. Re: PRO-92 or PRO-94 (it is now $199)

Hmmmm........

PRO-92. Expensive but does Motorola, EDACS and LTR tracking. HOWEVER, tracks Motorola using subaudible data on voice channels which is NOT as accurate or fast as data channel decoding, especially on busy systems, as a lot of people are finding out. Good conventional scanning features with selectable steps and modes. A good compromise if you want reasonable conventional and trunk tracking features or NEED LTR. Uses 6 AA batteries which adds weight! $349

UnidenBearcat 245. Tracks Motorola and EDACS by decoding the data channel. Excellent trunk tracking features. Has computer port and cable supplied. Can track conventional and trunked simultaneously. Conventional features not as good as 92 but recommended if you already have a conventional scanner and are after a dedicated SUPERB trunk tracker. Proprietary battery packs a minor irritation. $229

PRO-94. Made by Uniden and similar internal hardware to 245. Has 1000 conventional freq memories (245 only has 300 as 10 banks of 30) but you can only use 500 at one time and most trunked systems only have up to 30 freqs anyway! Tracks Motorola and EDACS by data channel decoding but can only store 50 IDs per system (245 stores 100) which I would find insufficient. NO computer port! NO simultaneous conventional and trunk tracking! NO autolight! $199 (On Offer)

If you're after a dedicated Motorola/EDACS trunk tracker, I'd get the 245 for $30 more, which gives you computer control and those crucially larger ID scan lists.

.....but best go and look at the scanners yourself, test them out and find out what systems are used in YOUR area. There's no substitute for doing your own homework if you're going to be stuck with the result for several years,

All the Best,

JohnC.

4058. Best FRS radios? What features?

Newsgroup: rec.radio.scanner

Source record: 101745
Cross-posted to: rec.radio.cb,alt.radio.scanner,rec.radio.scanner

Hi Folks:

Not certain this subject fits exactly in these groups, but I suspect folks who know scanners and cb radios would have an opinion here.

I was thinking of getting a pair of those FRS walkie-talkies, maybe for Christmas, just to tinker around with, car-to-car communications, around town or on hikes and walking, etc.

They would be smaller than CB radios and cheaper (in-range) than cell phones.

But I see a pretty wide variety of models out there, with various options; security codes, channel scan, etc. And I've never actually used one of the radios myself.

Any out there have any direct experience? Any opinions to offer on what to look for, or pricing?

Thanks!

The answer is: it depends.

Who are you going to talk to? If that someone is someone who is not familiar with radio equipment, then the most basis radio would be the one to get. A couple of channels at most. You don't need to get them confused with 14 channels and a gob of CTCSS tones and 12 buttons on the front of the radio.

I have a Radio Shack (some unknown model #) that I paid about $60 for, I think. It's pretty basic. I also have a Cobra MicroTalk3 that I paid about $70 for. It has everything -- *all* the CTCSS tones, channel scanning, tone scanning, vibrate, tone on/off, etc. It would probably confuse most people who haven't used scanners or other majorly complicated electronic equipment.

Source record: 101750

I'm thinking of buying a scanner in the $250-$300 price range.
I won't buy anything made by RS so that leaves Uniden or Bearcat.

What are the comparative qualities of one brand against the other?
Or are they both of comparative quality?

Am I missing out on a brand I haven't heard of that would be a
better choice than either of the two I mentioned?

In a nutshell, what the hey is the meaning of "trunk systems?"

(I've tried the search engines but I got damn sick and tired of
plowing through hundreds of pages of dealers and their advertising.
Businesses have just about killed the usefulness of search engines.)

Thanks

Josiex

Good points. Maybe one strategy would be to buy a pair of the less expensive models to experiment with or to loan to others I would want to talk to who lack experience with transcievers, then maybe later upgrade to something with more options...but that would still be compatible with the simpler models?

Sounds reasonable?

Uniden is Bearcat. They are the same. Bearcat was a brand name of the Electra Corporation when they started making scanner many years ago. Uniden Corp. bought the product line and the rights to the Bearcat brand back in the 1970s.
BTW, most RadioShack scanners are made by Uniden.
In addition to RS and Uniden/Bearcat there are also scanners being made by Icom, AOR, Sony, Alinco and a few others.
Do some research before you buy. Go to a news stand and pick up copies of Monitoring Times and Popular Communications magazine, read the ads and articles, then visit the web sites listed in many of the ads. You may find that a scanner you've never heard of is the one that fits your needs the most.

Uniden is Bearcat. They are the same. Bearcat was a brand name of the Electra Corporation when they started making scanner many years ago. Uniden Corp. bought the product line and the rights to the Bearcat brand back in the 1970s.
BTW, most RadioShack scanners are made by Uniden.
In addition to RS and Uniden/Bearcat there are also scanners being made by Icom, AOR, Sony, Alinco and a few others.
Do some research before you buy. Go to a news stand and pick up copies of Monitoring Times and Popular Communications magazine, read the ads and articles, then visit the web sites listed in many of the ads. You may find that a scanner you've never heard of is the one that fits your needs the most.

This new radio from Yaesu seems to have a lot going for it, yet it's mysterisly absent from the newsgroup discussions. I'd be very interested in any comments from users!

Thanks,
Bill Crocker

VR-500
COMMUNICATIONS RECEIVER

The VR-500 is a high-performance miniature handheld communications receiver providing general coverage reception from 100 kHz to 1300 MHz on the CW, SSB (LSB and USB), AM, and FM (Wide and Narrow bandwidths) modes (this coverage includes the AM and FM broadcast bands, HF Short-wave Bands, VHF and UHF TV bands, the VHF AM aircraft band, and a wide range of commercial and public safety frequencies!).

FEATURES:

Frequency Range:
0.1000 MHz - 1299.99995 MHz (Cellular Blocked)
90 mW AF Output (2 AA Batteries), 125 mW (EXT DC)
Memory Channels:
Regular Memory; 1000 CH, (100 CH X 10 Banks)
Skip Memory; 100 CH
Search Band Memory; 10 CH
Dual Receive Channel Memory; 10 CH
Priority Memory Channel; 1 CH
Smart SearchT
8 Character Alpha Numeric Display
Direct Keypad Frequency Entry
Priority Monitoring
Dual Watch
Band Scope
Alpha Numeric Recall
Memory Bank Scanning
Menu Mode for Feature Customization
Preferential Memory Scan
VFO Search
58W X 95H X 25D mm, 220 g w/ Battery & Antenna

> All I get is PL:none

I sympathize with you. I just started programming my new PRO-92 last night and found the manual to be a bit hard to follow on some things.

The PL tone info is saved when you move on to the next channel after the tone you wish to decode is displayed on the channel you are programming. The Enter key does not function when programming the Mode. If your scanner is displaying "PL:none" on a channel with a tone programmed in, it means one of two things:

1) You have selected the channel in Manual mode. According to the instructions (page 63), when you park the scanner on a single channel, it receives all signals in Open mode regardless of any other settings.

2) You are scanning that bank in Open mode. The directions for setting Closed mode are on page 64.

Its' actually stopped on a Motorola ID as indicated by the MO in the upper right corner. If you label all of the system frequencies with "COUNTY SYS-2" for example when you input them and label the stored ID's you get two lines of alphanumeric labels on the display when it stops on one of those ID's.

I'm assuming you're saying this because the display shows "none".

If you're in open mode, the display when any PL tone is present on
that channel will show the code being received. If you're in closed
mode and scanning you'll see the tone you stored when a transmission
with that tone breaks squelch.

It also seems that when this happens you can press MANUAL and still
stay in closed mode on that channel. If you leave that channel you
can only return to closed squelch through the SCAN mode.

The prices are VERY high, at $0.67 the 245 goes for $327US. Since it is available for $199US you have to decide if paying a premium of $128US is worth it.

<dabiggs@earthlink.net> writes
>Does anyone have any details on how to tap the discriminator output for the
>Icom R-10?
>
>Any information would be greatly appreciated!

1. Install a new mono jack on the left hand board/case side. The jack
can be mounted just below the flexible/cable.
2. Solder a small gauge wire (3 to 4 inches long) to test point QM. Test
point QM is indicated by a line that goes to the right of the letters
QM. Then solder the other end of that wire to the TIP of the new mono
jack.
3. Solder a wire from the ground lug to any point on the ground plane.

The above taken from the Optoelectronics OptoTrakker discriminator
modification instructions...

And yes, it does work..

OK THIS WORKS.

Go to the programming mode and enter the frequency and turn PL on.

EXIT PROGRAM MODE.

Sit on the channel . When the channel becomes active and the PL tone is
displayed push the RED TRUNK KEY as you would to store a trunking ID.

That will store the tone on the selected channel.

LOUSY MANUAL!

After I posted, I called 1-800-the-shac(k), and they confirmed that this
will be available 11/25. It is currently marked "discontinued," but the
operator I spoke to stated that this was a common practice to keep people
from back-ordering products that were not yet available. Price will be
$69.95.

Mine is actually picking them up in the 870-885 area. I know that this is supposed to be blocked, so I thought that maybe there is something wrong with it, or maybe a Jap/UK model? But it has the "T" after the X10. I really have no use for cell freqs. cause I live in the "sticks" and there aren't that many signals around here, and mostly cause what is on there doesn't interest me.

Love your sig! Never has it been said better!

Uniden is Bearcat. Too, bad. I hate to see competition die out,
especially in the low and mid end of any market.

Even though RS scanners might be made by Uniden, I'm sure they are
made to RS's specs. Also, I'm equally as sure that RS's arrogant and
incompetent way of handling repairs hasn't changed since I give up on
them a few decades back. Matter of fact, a comp mag, which ran an
article rating repair outifts for computers, gave them a rating
somewhere just above sewer level.

I live in a bit of a rural area and am guessing that the services near
me won't be using the most sophisticated equipment. So I'm also
guessing this "trunk" stuff probably isn't a real concern of mine. But
there is an RS down the road and I'll pick up the book and see if I can
get some idea from them where the action is around here.

I'm not an avid scanner fan -- I did have one before and used it on a
somewhat irregular basis. However, where I live now there is no local
newspaper nor radio station for the town, which means I need a scanner
to keep up with a lot of things I should know about. If someone is

knocking off my neighbors in a sequential fashion, I'd like to have a
bit of a warning before he reaches my house. :)

Work with me here.

Put the radio in PGM mode.

Select the channel that you want to program.

Enter a frequency.

Press MODE to get to PL mode.

Press step to select the PL tone you want.

Now, press the UP arrow to go to the the next channel. Note that the PL tone display changes to reflect whatever code the next channel is using. Press the DOWN arrow to go back to the one you just programmed. Note that the PL tone you selected was stored simply by using the STEP key to select the one you wanted, and is still intact.

If you press MAN and view this channel, you will note that it says P/L: NONE. Press PGM and the PL tone you selected will reappear in the display.

When in MANUAL mode, the radio appears to be in "P/L Search mode" and will display the PL tone being used by any traffic that occurs while in MANUAL mode. That's why it says P/L: NONE. If you get a hit while in this state it will display and hold the PL tone of the hit. If you press TRUNK while in this state it will store the current P/L tone, replacing the previously stored tone if there is one.

Unfortunately, there does not appear to be a way to enable PL squelch while the radio is in MAN or PGM mode. PL squelch only works when scanning a bank in closed mode.

Hope this helps.

Jack

Newsfeeds <lzrd@mail.one.net> wrote in message news:38386ab6_4@goliath.newsfeeds.com...

OK THIS WORKS.

Go to the programming mode and enter the frequency and turn PL on.

EXIT PROGRAM MODE.

Sit on the channel . When the channel becomes active and the PL tone is displayed push the RED TRUNK KEY as you would to store a trunking ID.

That will store the tone on the selected channel.

My DJ-X10 (new in Jan of 1999) received the 800 mhz band cell frequencies directly out of the box. However, after fiddling with the radio as part of linking it to my PC, I did a reset and puff, there went the cell band coverage. However, it does hear the cell image so well in the 1400-1500 mhz range, it is really no loss and the radio is legal, from the standpoint of the frequencies it directly covers.

I just bought one and am not impressed! The rcvr is deaf on most freq and modes. The internal noise is high, rcvd sig low. The audio is weak and distorted. At high vol it breaks into oscillation. This is with ant from the rubber duck to resonate dipoles. It is easy to program and navigate and it is cute as heck!!. Just not much of a rcvr. ANyone else have comments?

Greetings all...I normally don't ask for help but I need some assistance in ID'ing two skip stations...I logged over 40 stations this afternoon and have most ID'd except for these. Can anyone help?

39.500- Fire Dispatch to" ____Jefferson School Road, just below Willard."
I tentatively ID'd this one as Metropolis, IL....Anyone have a better idea?

39.580- A Police pursuit on "Tennyson Road", with units approaching "772" and "32". This one was drowned out during the pursuit by another station giving a return on someone's driving record, subject was from West Virginia.

TIA,

Brett

From: inigo@montoya.net
Message-ID: <383812fa.3896801@news.earthlink.net>
Source record: 101875

Please NO! Do NOT go with "cheap"!

Spend the bucks. Get one with channel scanning, CTCSS code scanning, beep alert on/off, vibrate, etc.

Otherwise you'll soon be asking for "modifications" for the FRS!

I've seen FRS units go for $39 a pair, and I've seen 'em go for $150 each. You get what you pay for, and if you pay a little more, you can get a whole lotta radio. I got a Cobra MicroTalk3 for (I think) somewhere around $75 on www.ubid.,com.

Got to get that fleet map set. Go to the first channel in your trunk bank (0,00 1,00 2,00 3,00 400, ect.) When you press 8 in set 5 inter 15 for size S=00 would read S=15. And all other channel with type ll will load S=15. Atlest mine did. and boom you got ID! Also I find it hears sub tones or IDs better with a whip type antenna. Seem to be a great scanners so far. Gives me pl tones on repeaters, a plus for me!

Hope I helped. Manual is alittle vague their! Lets just call it scan trunking..... :-)

I can read and understand the manual.

My question is how does one enter a frequency and PL tone into a channel.

If you follow the instructions in the manual everything is ok until you try
to save the info in the channel.

There is no way to leave the programming mode and have the PL tone stay in
!!!

All I get is PL:none

HELP PLEASE

I don`t know where this guy `s been but at walmart / kmart / harbor freight / target /any electronics store they are everywhere
ihave seen them as low as $19.95 for two one channel frs radios.
the most i have seen a fourteen ch.with all the bells & whistles is $200.00
not bad for a class B radio service listing

THEY MAYBE WATCHING BUT WERE LISTENING

I have for sale:

1 - 10 channel SP50 (Motorola) VHF high Band with speaker mic, rapid charger and antenna. Some wear but good shape $250

2 - STANDARD HX580T(AA) portables with 4 batteries, antennas, DTMF pads, LCD display and 1 rapid charger, both seem to work fine. I believe they are trunking 800MHz. $400 pair

ALSO for sale

1 - MICROLOGIC Sportsman GPS unit with serial output and stand. Works fine. $150

1 - Pro-46, 100 channel unblocked scanner with antenna $150

1 - Pro-2036 base unit, perfect condition, dial tuning, WX alert and more $200

4125. Pro 92 RF performance

Newsgroup: rec.radio.scanner
Date: 1999-11-21 00:00:00 UTC
From: "Michael J. White" <mike.white@erols.com>
Message-ID: <818rep$18d$1@autumn.news.rcn.net>
Source record: 101889

A friend of mine is a professional service tech with a bench full of high-end HP test gear. He ran my new Pro 92 through its paces and here is what he came up with (shows frequency, measured sensitivity and speced sensitivity; in every case sensitivity was better, sometimes much better, than spec.):

--------------- FM Tests ------------------------------

40 MHz .30 uV .30 uV
146 MHz .38 uV .50 uV
162 MHz .40 uV .50 uV
400 MHz .38 uV .50 uV
460 MHz .37 uV .50 uV
500 MHz .41 uV .50 uV
820 MHz .42 uV .70 uV
850 MHz .42 uV .70 uV
900 MHz .42 uV .70 uV
950 MHz .48 uV .70 uV

Attenuator : About 20 dB < 150 MHz, 15 dB @ 460 MHz, 12 dB @ 850 MHz

Selectivity as good or better than Spec (which is -6 dB @ 10 KHz, and -50 dB @ 18 KHz)

That's how mine performed on the bench; your milage may vary.

FWIW, the data stream from scanner to PC is not at all simple. It seems to be sending one block of data for each memory bank, but it is far from simple ascii; mostly gibberish with lots of nulls. We're still working on that, but it amounts to cryptanalysis. If anyone has any info on the protocol, I'd appreciate hearing from them.

4126. Re: PRO-92 trunking performance concerns

Newsgroup: rec.radio.scanner
Date: 1999-11-21 00:00:00 UTC
From: Greg Dean <N9NWO@AMSAT.org>
Message-ID: <ukSZ3.1905$VO5.51262@dfiatx1-snr1.gtei.net>
Source record: 101890
Cross-posted to: alt.radio.scanner,rec.radio.scanner

: I've just (something like 24 hours ago) received a PRO-92 direct
: from the RS warehouse. I've found a few features that I am impressed
: with. The increased sensitivity over my usual handheld - AR-8200 - is
: quite nice, it has good "heft", alpha tags are quite nice, etc.. I've
: quickly developed some reservations, however, with respect to its
: trunking performance.
:
: The directions for entering trunked frequencies are ...
: succinct might be a good word. Apparently, they are significantly easier
: than the dual "mode" thing my BC-235 utilizes. The directions seem to
: suggest that one simply enters the frequency(ies) as any other
: non-trunked ones in the bank and set the mode to the appropriate (in my
: case "MO" for Motorola) system you are scanning.
:
: Once frequencies are entered and trunk tracking is begun,
: however this unit's performance in tracking the various talk groups
: compares poorly with the old BC-235. Talk groups seem to shift number
: IDs while the conversation is in progress. Sometimes these numbers are
: identifiable as simply 32 digits removed from the correct Type II ID. At
: other times, the ID number is so far removed as to make a quick
: calculation of its relationship in terms of multiples of 32 impossible.
: It seems to lose track of transmissions - even in "closed" mode or even
: when on "ID hold" status.
:
: Is anyone else experiencing such poor performance? Is it
: possibly related to marginal reception of the signal? I must add that my
: 235 doesn't display such flaky performance nearly as often (I am maybe
: 10 - 12 miles from the transmitter). Could I have misread the
: programming directions? Is there a not-so-obvious step that I could have
: overlooked? Are there other resources - mailing list, web sites (I know
: of Rich Wells Strong Signals site), etc. that might be of help.
:
: If I've programmed the radio correctly and this performance is
: typical of the breed I think that acceptance in the hobby us going to be
: marginal at best.
:
:

The Radio Shacks in Indiana have just recieved there
first PRO-92s for $349 each (the data cable which plugs
into the side IF port is $69.95).

The PRO-94 is now $199 thru Christmas Eve. It sounds
like it would be cheaper to buy the PRO-94 as most of

the systems in Indiana are Motorola Type II. (At least in Indy and Lafayette plus the State system)

Too bad that AOR doesn't make the 8200 with trunking capability. Having the made from DSP processors would also give it flexibility.

Hi Jeff,

You can use the Datafinder at PerCon site :

http://www.perconcorp.com/scripts/foxweb.exe/procmenu?\0\FCC\SPECTRUM\SPECTRUM\SPECTRUM

You will want to search for Radio Service YU in the 935.0125 thru
939.9875 frequency range.

I think I may have found one that's located in Los Gatos.

It's shared by several businesses here in the South Bay.

938.1375

This is most likely one of the Pre-1984 Cordless Phones. The Base
frequencies were in the 1.6 to 1.8 Mhz range (1655 - 1795 khz) and
Handset frequencies were in the 49.830 to 49.890 Mhz range.

4142. FS: Icom R7000 Communications Receiver

Newsgroup: rec.radio.scanner
Date: 1999-11-22 00:00:00 UTC
From: jimdpeters@aol.com
Message-ID: <19991122134503.12667.00000852@ng-fw1.aol.com>
Source record: 101652

I have the following Icom R7000 communications receiver for sale. I have two of these and want to sell one of them. "See picture" I will give you the choice of either radio. They are both in EXCELLENT condition except the top radio in picture has a meter light that is burnt out.

<A HREF="http://members.aol.com/jimdpeters/icom7000.jpg">For Picture of the Icom R7000 Click Here</A>

Considered by many to be the top of the line VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB, AM, NFM & WFM allows reception of most everything you want to listen to. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recording.

IC-R7000 SPECIFICATIONS

Frequency Coverage 25. MHz to 2000 MHz. "with a gap between 1000 MHz & 1025 MHz".
Mode: Upper & Lower Sideband, AM, wide FM, narrow FM
Memory Channels: 99
Tuning Step Increment: - 0.1, 1, 5, 10, 12.5, or 25 kHz.
Power Supply Requirement (U.S.A): 117 Volt AC
Usable Temperature Range: +14ï¿½F ~ +140ï¿½F
Dimensions: 11.3(W) x 4.3(H) x 10.9(D) in
Weight: 17.6 lbs.

The R7000 has (6) seperate scanning functions:
1. Priority Scan
2. Programmed Scan
3. Selected Memory Scan
4. Selected Mode Memory Scan
5. Memory Channel Scan
6. Auto-Write Memory Scan

The receiver comes with the original box and styrafoam packing, and owners manual. Everything is in EXCELLENT condition and has been in a non-smoking environment. I'm asking $750 for the radio. For that price I will ship it and insure it.

If you have any questions I will be very happy to answer them.

The first thing you need to know is B=Block Number S=Size (of that
particular block)

>The service is E1-P4. What is the fleet map S-??

Here's what you need to program...
Block 0 = S12
Block 1 = n/a
Blocks 2, 3, 4, 5, 6, and 7 = S4

>E1-P10 means fleet map S-??

Blocks 0, 1, 2, 3, 4, and 5 = S0
Blocks 6 and 7 = S4

>E2 means fleet map S-??
>
Can't help you there?

Depends on your location. However regardless of your location you'll won't see the Coast Guard too 100% digital as they still value the help of everyday people. I listen to them a lot along the East Coast and they appreciate and manytimes ask for help from other civilian boats and planes. I regard them with the highest respect because the respect the people they serve.

Now, the police....JackBootestThugs come to mind...?? Ok, I must admit that not all are that way. However we are moving in that direction. Here in Pennsylvania the State Police will be ASTRO-Crap soon, but not a biggie as most police activity is conducted by local and city police. Here in Lancaster County (and city) PA we're not even trunked and I don't see it in the near future. In many cases it appears the lancaster police do repect the help they recieve from us scanner owners. I know I've help in locating the "bad" person on more than once.
However in Philly, its a different story. Soon that city will be digital and the police regard themselves as 2 steps above God. Quote from the Police Chief in Philadelphia the other week "Citizens have no need to hear us, its none of their busiess". Thank God I no longer work near Philly and soon I won't be living in PA!

I listen to some rail and I don't see them spending the money for Digital, plus with the remote locations their traveling through I can't see 800-900MHz working well for them without a TON of repeaters.

And Aviation will never be 800-900 MHz in our life time. Aircraft are still and always will use AM. I don't think you'll ever see aviation go FM, too costly and just not needed (been a pilot for 10+ years and we don't need FM, AM works, not break whats not broken!)

Now, my question, how many of you are scared of a police force in which they want to keep ALL their communications secret? I CALL THEM THE SECRET POLICE! I ticks me off to no end when police want to do digital simply to keep law citizens from listening. Its scary that the police want a more secure communictaions system than the military!!!!

Keep Scanning

I just bought a Samlex 10-12 Amp switching supply from an Internet site for about $75 new. I bought it to charge gell-cells, run my dual band mobile, and power the scanners. The model I purchased is specifically designed for communications equipment and is very low noise. It think the stigma of switching power supplies being noisy is an out-dated concept. The super slim profile of my supply is great. In fact, they sell a 23 amp supply the same size! Go for the switcher!

Well I'll say this much, if the Chief really said that then he's an ignorant ass. While I hate to see anything slip from our reach I can't make a good enough argument against police securing tactical communications. I do however think that everyday police calls, vehicle stops and medical assists should be publicly accessible through scanners.

If the City of Philadelphia thinks that this new radio system will solve problems for them they're wrong. I think the "Community Based Policing" idea they've empraced since the Chief Willie Williams administration will go right in the crapper if it hasn't already (I haven't lived there since '93).

While I agree that there was work to be done on the system, there are better ways to spend a huge chunk of change. Ask any Officer and I'm sure he or she will agree. Make the neeessary fixes and some upgrades to the system and put the remaining money to better use than shutting out the citizens of your city.

Long live the memory of Rizzo!!! Boot-kicker extrordinaire.

You can read the review on www.strongsignals.net . Didn't sound that impressive. I've got the related VX-5R, and an very happy with it. 6m, 2m, and 440 tranceiver with lots of nice scanning features. It covers some shortwave, but I've never tuned it that low. The all metal case is nice (except it transfers heat to your hand very quickly when you transmit).

Thanks for the info. My first question would be how good their quality control has been. It is encouraging that the specs measure so favorably. I wonder if they all measure so well.

What the 92 really needs is a visual indicator of signal quality for data decode! Even an S-meter would do the trick.

Come on people, think about this....

Digital cell phones do NOT communicate end to end encrypted... (Well,
ok, some do ... but let's just leave that alone for now!)

They communicate to the cell company. So that means they are no
more secure than your regular phone talking on the wire. Do you REALLY
think that is secure from the government listeneing if they want to?
Are people THAT F>>>ING STUPID???

I guess they are!

4157. Re: Coke Antenna Mystery Exposed!

Newsgroup: rec.radio.scanner
Date: 1999-11-22 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <81canc$5up$1@ash.prod.itd.earthlink.net>
Source record: 101667

No one is denying that there was a story in the news about Coke
machines.

No one is denying that there was a story in the news about Coke
machines that will adjust the sellings price based on conditions.

What we are denying is that this has nothing to link it to the antenna
that people are reporting on some vending machines here in the US
already.

What we are denying is that there is no evidence at all that this
has ever been done or even experimented with in this country, or
by Coca Cola corporation in any country where they operate as a
wholy owned entity.

That is NOT to say that there may not be vending machines out there
that record environmental conditions, log sales and environmental
data, and report that when queried. In fact, that would be an
EXCELLENT use of an intelligent machine with communications
capabilities. (oh oh, did I say too much....)

But...

The local radio station STILL reports that bullshit story about the guy
putting JATO units on his car. Does that make it a fact?

More than one station in Boston reported on the aids infected needles
in Dallas theathers that was a total farce. Does that make it a fact?

Just because something was 'heard' second, third, or fourth hand,
does that make it a fact?

You know, that's the problem with the internet. There is no
qualification.
Tons of stuff out there, but surrounded by tons of garbage. It used to
be you could always go to 'learned journals' and at least find
references
to good information. Now with the internet there seems to be little
or no qualification on what is 'good' and what is 'garbage'. A learned
study on the reactions of certain proteins in the brain to a specific
inhibitor unfortunately is presented with the same credibiltiy as the
web site that proposes making foil hats to prevent aliens from
controlling your thoughts.

Howdy!

There is one available on the Yahoo auction site, and I've purchased things from the seller before. He's a good guy and his stuff seems to always be in great shape. The link to the auction is:

http://auctions.yahoo.com/auction/10970294

Best Regards,
Jay

The MFJ-4225MV switching 25A supply (``New!'') is a real birdie generator
on MW. ``This baby is quiet'' says the ad.

It sits unused in an old refrigerator in the basement, which wasn't enough
to shield it either, next to 25 ferrite beads, also insufficient.

It's been back and forth to MFJ once for it, so I gather it meets their
specs. I'm unreluctant therefore to report that it sucks.

Hi,

You probally could, you would just have to find out the encryption
algorithm (the the chip out of the phone and transfer it to software).
Plus for stuff like this it would be wise to use a computer to process
the signal, as this would be cheaper and much more expandable.

I have not done any of this cuz I haven't the finances but I know that
it can be done

Message-ID: <Dzj_3.17$F7.4850@newscene.newscene.com>
Source record: 101674

Well, If you put it THAT way, I'll give it a try! ;) Keep in mind that this list is not complete, and the assignments are "best guesses." So far, I have:

24816 Police dispatch(?)
24752 Police mobiles(?)
16496 CityBus mobiles(?)
16464 CithBus dispatch(?)
24720 Police mobiles(?)
26768 Public works(???)
26832 Public works(???)
16848 (???)
00048 Police phone patch
25776 Public works
25744 Public works
25648 (???)

That's it for now. Problem is, I can't really monitor when many of these talk groups are active, so any help is appreciated.

Thanks
Bill

Yeh, I AM "Absolutely sure about it", if the Congress has to bother holding "phony hearings" to "determine if it exists". what a bunch of balderdash..... Like I said, it couldn`t have BEEN built without THEIR EXPRESS APPROVAL, PERIOD. What`s the matter, too "subtle", or what ? Next they will "appoint a study". Anything to stretch it out past election time.....

The head of Australian Security ADMITTED ITS EXISTENCE and said THEY had been using it for quite some time to spy on people ! THAT, my friend is FACT. Try watching the news once in a while, fella. The head of Australian Security doesn`t GIVE a good rat`s behind who gets elected or not elected here in the States ! And THAT is why he doesn`t have any qualms about admitting openly that it does, INDEED, EXIST. Wake up and smell the stink !

And When you`re done smelling the stink, try a whiff of the gigantic HYPOCRISY. They tell US we can`t listen to cell phones, while THEY spy on MILLIONS here and abroad EVERY DAY, 24 HOURS A DAY. Guess it`s the old rule:

"Dont do as I DO ! Do as I SAY!

do not they get paid 25 percent commission on the
selling of extended warranties? it's a big profit-maker
for RS and others. This way they must give their
employees an incentive for tying to sell these extras.

Look at Damark and the like: they try to sell you on their
"discount club" membership. to save an extra 10 percent
and/or get free shipping on new orders, etc.

That's how they get people to work there: they pay minimum
wage plus commissions on all extra people who switch over
to joining their club.

the best deal would be just lower the prices another 15 percent
and do away with all the "over-sale, after-sale" gizmos they
seem
to want to sell you. magazine subscriptions and more...

RS is just doing their part to make you happy you get to spend
so much
more money that you thought you would keep for the next time you
are
at Big Mac with all the kids....

bill conduit
etc.

4169. Re: What kind of scanner is this??

Your photo shows a 20+ year old scanner which was
known as the Robyn 4000 in the USA. The frequencies
you cited indicate your scanner is a European version.

Servicing data for the Robyn 4000 is contained in Volume SD-14
of the Sams book entitled "Scanner-Monitor Servicing Data."
It was published by Howard Sams Publishing division of
Prentice-Hall at (800)428-7267,
http://www.hwsams.com/sams_model_new.html

4173. Re: SKIP?

Newsgroup: rec.radio.scanner
Date: 1999-11-22 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <3839E49F.794BE106@dialpoint.net>
Source record: 101683

Skip is a general term for when a signal is heard past the normal range of a direct signal. The normal range can be approximated by taking the square root of the height of each antenna in feet and adding them together. This will give you a range in miles. Multiply this by about 1.5 for an additonal fudge factor.

There are many ways to receive a signal past this range. Depending on the time of day or night there is a layer of charged particals called the Ionosphere. This is like a mirror to radio signals and is from about 45 to 200 miles up depending on the frequency and time of day and seasons. This is mainly at frequencies below 30 mhz.

Sometimes a small area of highly charged particals will appear and it is called Sporadic-E. This does the same thing but usually for frequencies much higher such as 50 to 150 MHZ.

You will also run into Tropospheric Scatter and ducting as modes to get a signal past the normal range. Sometimes the weather is such that a layer of air is trapped between two other layers and creats a duct that will carry signals in the vhf/uhf range a long way simlar to a microwave wave guide.

Try doing a search on the above or go to a library and look for a book called the ARRL Handbook published by the American Radio Relay League. The handbook contains some info on almost all forms of radio transmission.
Doubt that you will find much info on the skip at the web site but look at their website www.arrl.org .. That is a national club for Radio Amateurs otherwise known as Ham radio.

I think I'll end up keeping my Pro-90, too. When things get really busy it can be handy to have a second trunking unit around. Besides, the low price on the new RS Pro-94 kinda ruins the market for the older model.

From: John M Morey <JMOREY@prodigy.net>
Message-ID: <81cpu3$3tso$1@newssvr03-int.news.prodigy.com>
Source record: 101686

I have a Radio Shack PRO2006 scanner that is over three years old. Sensitivity is key to me. I was very impressed with the PRO2006 until just recently when its sensitivity just went away. It is nowhere near as sensitive as it was. Why does something like this happen? Is there anything I can do to get the radio back to acceptable performance? Should I talk to Radio Shack about fixing it or is it a lost cause?

4177. Re: PRO-92 or PRO-94 (it is now $199)

Newsgroup: rec.radio.scanner

HAM RADIO OUTLET has the BC 245 XLT for only $199 in their Winter Catalog.
This is a significant nationwide USA chain of amateur radio gear.
I bought my 245 XLT from them six months ago for $229 when they first came out.
They sell extra battery packs for $17.

BTW very few people are happy with the PRO 92. Almost 95 % of my email is running thumbs down BIG TIME on this radio.
I doubt if it is even worth $150 instead of the $330 to $350 Radio Shack is getting!
Don't buy a used PRO 92 unless you have tried a new one with the Shacks 30 day return - no questions asked policy.

The people who are getting screwed with this radio are the ones who haven't Internet access. I can't wait to see who tells the truth in the print magazines about this one. If a magazine recommends the PRO 92 it will be clear to all that they can not be trusted to deliver an unbiased opinion to their readers. The content of many magazines is being controlled by self interest, they profit by advertising and/or they sell the items they review.

John,

Speaking from the embarassment of experience, let me advise you not to do anything drastic about your Pro-2006 until you've checked the position of the 10dB attenuation switch on the back of the scanner.

Good listening,
Charley_Harp@alum.calberkeley.org

I own and/or have tested over twenty models of FRS HTs.

The BEST are...<drum roll, please>

Well, if it's sheer simplicity of use - get a pair of the Vertex VFX-10 HTs. Under a hundred bucks each. Full power output. All 14 channels (weather channel reception, too). Simple to operate: just two knobs, ON/OFF/Volume, and a chennel selector. Couldn't be easier. Can NOT be out-performed by ANY other FRS HT. Has DCS encoding if you find all available channels busy in your region.

If it's full-features you want (LCD display...audio inversion speech scrambling, et al) then the original Kenwoods are now about 70 bucks each. Although "only" 300mW out, you will never know they do not have the full FRS legal output.

There are many bargain basement models out there - and, as in life, you usually get what you pay for. Radio Shack hasn't produced a unit with good case material yet. The cheapies at discount stores for fifty bucks a pair are, in my opinion, not worth playing with.

My choices have been Kenwood and Vertex for a couple years now ... both quality products from reputable manufacturers.

>especially in the low and mid end of any market.

Ah, but the competition is hardly dying out. The Icom R2 and AOR AR16 both sell in the $200 range, and offer wider coverage than any Uniden or RadioShack model. If anything there are more scanner models available now than any time in the past 10 years or so, and the capabilities have skyrocketed. With the marketing of the new trunking scanners there are plenty of good, used conventional scanners on the market, too, and at very attractive (cheap) prices.

Not quite sure what you were saying in your last sentence here. My
take on the 8200 CPU is that it couldn't handle another thing to do
(like trunking). But I'm with you in wishing that it could (and
wouldn't it be neat if someone could come up with a card to fit the
card slot that would allow trunking).

>several years,

Like just about any other hobby, if you can wait until a couple of
months after Christmas, you can get a 245 without the 5 second delay
exiting a trunking system (the Pro 92 doesn't have this "feature" from
what I hear). And you can maybe see what the deal will be with the 780
(is that the right model #) mobile. And while I would be surprised if
it was any time soon, I would think that Uniden would eventually want
to do a handheld with alpha-tags and trunking (a marriage of the
SC-200 and BC245).

I wish it was an easy decision... Even $315 (with 10% discount coupon)
is a lot for the Pro 92 (and there's no AC adapter or batteries
included)...

While we're at it, does anyone know of any LTR systems with "earshot"
of the South Bay Area (Mountain View California)? Where would I look
for this information?

Thanks in advance,

Just leave. The PL tone ain't gonna display unless it's present.
Beleive me, have faith, it works. If you want to verify it's in there
you can do this...

1.) Press MANUAL
2.) Enter the memory number for the frequency in question.
3.) Press MANUAL
4.) Press PGM

Display will show frequency, PL mode and tone freq exactly as you
entered it.

I've done it myself personally and it works I assure you.

Radio Shack has two 120vac to 12vdc 3 amp rated power supplies. One is a conventional unit (heavy with a big transformer), and the other is a lightweight unit (I assume it's a switcher). And just to be technically accurate, the switcher will work off 120 or 220vac.

So, my question is, which of these units has a more pure noise free 12vdc output? I want to replace the numerous small "wall wart" transformers that plug in the wall with one power supply, and I want to power a number of scanners.

Has anyone tried either of these power supplies? I'm worried that the switcher will have a bunch of "hash" on the line, and I'm worried that both of them will not be adequately regulated such that they will have "AC hum".

Oh, and as an aside, the catalog calls these things "12 volt" power supplies, yet the front of them are labeled "13.8v". Will this be a problem for units that have a nominal 12 vdc input?

In *general*, switching supplies are noisier than non-switchers. Can't speak to this particular pair, but if you can deal with the extra weight and size, I'd buy the non-switcher just to be safe.

> Oh, and as an aside, the catalog calls these things "12 volt" power

There's a good chance that if you look more closely at the equipment you're powering, you'll find it's actually specified to run from 13.8 volts. If it's designed to be installed in a car (if your scanners aren't hand-held units) then it must be able to tolerate 13.8 as the "12V" system voltage in a car is usually at least that high.

I use the 3a 13.8v supply that's not switching, 22-504, which was
on sale for $32 or something and may still be, regular $39.99,
with no problems (replacing a MFJ 25a switching supply, which produces
birdies).

Remember to fuse everything. I use 1/4 amp fast acting fuses
on everything individually, and 1 amp on supply output for the
bunch, so as not to overheat any wires, and haven't had any
trouble except when plugging in ANC-4's, which sometimes blow
the fuses when they charge up a capacitor suddenly.

From: Michael Stuart <mstuart@flash.net>
Message-ID: <38391286.AA62416D@flash.net>
Source record: 101734

For Sale

RS Pro-62 200 Channel AM/FM Scanner with Ni-cads Batteries
$110.00 each

I'm in the Dallas/Fort Worth Area or willing
to mail COD.

Great for the car races or sporting events

E-mail me for more Info or if interested

PRO-62 Programmable Scanner
$120.00

--- Features ---

Frequency Range:
30-54, 118-136.975 AM, 137-174, 380-512,
806-824, 849-869, 894-960MHz

Triple Conversion Superheterodyne Tuning -
virtually eliminates intermediate frequency imaging
interference (common to 800 MHz dual conversion receivers)
so you can clearly hear only the scanner's received frequency.

Hyperscan - searches through unstored frequencies at 50
steps per second or scans stored channels at 25 channels
per second.

Monitor Memory - lets you temporarily save up to ten
frequencies you find during a frequency search so you
can decide later if you want to store any of them into
permanent channels.

Two-Second Scan Delay - delays scanning for about two seconds
before moving to another channel so you can hear more replies.

Ten Channel Storage Banks - let you store 20 channels in each
of 10 storage banks to group frequencies so you can easily
identify calls.

Liquid-Crystal Display - shows the selected channel and
frequency and the selected modes.

Memory Backup - protects the stations stored in your
scanner's memory for up to 1 hour without the battery.

Lockout Function - lets you set your scanner to skip over
specified channels.

Keylock - prevents you from accidentally changing the
scanner's programming.

Priority Channel - lets you designate a channel to
be scanned every two seconds so you do not miss
important calls.

AM/FM Mode - automatically selects the most common
reception type for the band you are scanning, and
lets you override the default selection.

Battery-Saving Circuit - draws only 40% of the normal power.

Optional Power Sources - let you power the scanner from
internal batteries, standard AC power, or from your
vehicle's battery.

Ni-Cad Battery Charging Circuit - lets you recharge
nickel-cadmium batteries while they are inside the
battery compartment.

--- Basic Specifications ---

Scanning Rate ..... 25 Channels/Sec.
Search Rate ..... 50 Steps/Sec.
Priority Sampling ..... 2 seconds
Delay Time ..... 2 seconds
Antenna Impedance ..... 50 ohms
Power Requirement ..... +9 VDC, 6 AA batteries or a suitable
adapter (negative ground only)
Current Drain ..... 95 mA
Dimensions ..... 5.75H x 2.25W x 1.75D inches
Weight ..... Approx. 8.8 oz (250g)
(w/out ant. and batt.)

Assuming you're monitoring a Type II system, offsets from the base
talkgroup number are perfectly valid. The difference between the regular
talkgroup number and the value you observe indicates one or more special
function flags. Perhaps the most common is +3, marking a bridge between
groups. Other flags may denote an emergency signal, sub-group alerts, etc.
If the majority of numbers are not divisible by 16, you probably have
a Type I system and will have to program in a fleet map.

It doesn`t matter anyway. If the encoding were as perfect as the day is long, the government could still eavsdrop on your communications. They can obtain the key to any encryption scheme they so desire, under the guise of "national security". Do you REALLY think that they are going to allow any encryption without them being excluded from it ? The Echelon system decodes millions of phone calls every single day, your call being among them, no doubt. We have recently seen the government "cover-up" and "denial" of the Echelon system. Why would Congrees have to hold "hearings" to determine if it exists, when it couldn`t have been BUILT WITHOUT THEM APPROVING THE FUNDS TO BUILD IT ? This is the equivalent of you saying you have to "investigate" to see if you own a car, when you know damn well you bought and paid for one !!!!!!!

Howdy,

The earth's ionosphere has several layers which reflect radio frequencies. Typicly these freq,s are low, less than 100 Mhz. This is how world communication was done back in the ole days. Due to an increase in sunspot activity this condition is stronger this month. Another condition often mistaken as skip is called ducting. On freq's over 100 Mhz weather conditions can cause layers in the atmosphere,(may be thermal, moisture, dust etc...), which can channnel radio waves like a big transmision line.
Regards,
Ed

Public safety agencies who have been using digital modes report exactly the opposite. Equal coverage from a digital system to an analog system requires higher transmit power and/or more transmitter sites. When the batteries start to get low in dual-mode portables, the users generally have to switch to analog mode to continue talking.

I have not ever heard CB-like traffic on a police radio. However, I can't deny that it might happen in some types of community (either very rural or very large cities).

See Industry Canadas web site , there youll find an application for a
Digital Scanner.

Our Govt realizes that the scanner is not in production , however it
is a matter of time...the document is dated , 1996 , so from that
date which so happends is the same yr Mot / ER , sold most everything
to the APCO 25 Project.

As far as decoders go , I know / use a Unix version of a dvp decoder
, that I co wrote.

That software is not avial , just yet...once we can apply it to a
Win32 platform, then it will be released , however this should be
rather old news , I know were not the 1st to code software , nor have
Digital scanners (Appication for license) btw : REALM did spend mega
$$ to APCO for the rights to all of the project 25 material.

I'm looking for a scanner with the following features:

-800 MHz coverage (don't care about cell)
-Alpha tags on memories
-Programmable by hookup to a PC (frequencies and alpha tags)

I'm principally thinking about a handheld scanner, but would consider a desktop. I don't care about trunk tracking, just ordinary scanning. I'd like to keep the price under $300, preferably under $200. Any suggestions? I just bought a Pro-92, which seems like a nice enough scanner (haven't tried trunking), but even though it as a PC interface port, there's no software, and no indication of what that software will do when it does become available. Also, I feel like I'm paying a lot for trunking features that I won't ever use.

Obvious candidates are the Yaesu VR500 and the Icom R10. Any others? Thanks.

Good point! VHF NAVAIDS aren't going anywhere any time soon. GPS is cool and reliable but it's just a baby compared to VOR's NDB's and all of the other good stuff that has worked like a charm forever. Even when GPS becomes more integrated or even the standard, VHF NAV I'm sure be used as a failsafe in the event of disaster.

Hi all..

using the inversion programs for scanning.

Okay down and dirty....

I have 1 2006 my sound card is an SoundBlaster 16
Cable out from tape to inline on the sb16
Muted Mic with the mixer.

No luck! An I had these programs working like a charm before on this
machine?
I think I recalled backing out the plug going into the sb16 linein port.
Tried it again and nada.

Did I have it to the ext speaker before? (Ill Try now?)
Any how if anyone sees what I am doing wrong I would greatly appreciate it.

I know there are lots of police groups looking to go digital. I wish them the best of luck. They're going to need it, from what I've seen. It will require lots of receivers, lots of error recovery coding, and some very expensive radios.

Frankly, in a disaster, I expect the whole damned thing to fall apart.

That's why the water utility I work for will continue to use low-band VHF simplex for many years to come. Why? Because our radios put out 100 watts and we can communicate pretty well over two very urban counties with just two transmitter sites and a few receiver sites.

Even if terrorists bomb our headquarters building and destroy our private microwave network, somebody can always drive to the top of a hill with his two way radio and run the show from there.

There is something to be said for a system which doesn't need an infrastructure to support it. I think the police who go digital will be very sorry puppies when the first major disaster hits.

That's just my humble opinion, of course.

Remember how Philly police did some amazingly dumb things in the past? (like the bomb they dropped on the MOVE house which burned down an entire city block?). Choosing to be a guinea pig for this new system is perfectly normal for them. They can make dumber decisions than just about anyone.

If they actually make this thing work reliably, I'll be very impressed.

Our local police take advantage of scanner listeners.
"Good morning scanner listeners, school has been cancelled today
due to the snow (floods or whatever), please alert your friends"
On very rare occasions the detectives will use speech inversion scrambling.
And some wireless phones are available for sensitive stuff.

How about those red, green, and yellow LEDs! Listening to that scanner and watching those LEDs in the dark would be as fun
as listening to hifi stereo while watching the vacuum tubes glow, or
listening to a reel-to-reel tape recorder watching the reels go 'round.

I thought that it was really cool that a poster mentioned that Bob Parnass probably knows what that scanner is, and he will reply.
Sure enough he did shortly afterwards. Bob is certainly a major
credit to this NG.

You're joking right? You can buy a PRO2006 everyday of the week for
$270-$300 and with the Opto 456 interface for $400. If you're willing to pay
more than that I have a bridge in Brooklyn and some property in Florida that
I would like you to buy.

<DDwpascanrecDD@geocities.com> wrote:

>AM is used for a reason in aviation, safety.

While this isn't exactly urban legend, it's not the real reason
Aviation uses AM.

The real reason has to do with history. Back when radios were first
installed in aircraft, the world needed a standard to use for all
airplanes. It was at the end of WW II. In those days, FM was
virtually unknown in common voice frequency transmissions. They
needed an easy and simple mode of communications. So they used AM.

AM was the standard on VHF in those days. FM didn't take hold until
the late 50's. Airplanes, being the international vehicles they are,
quickly brought this standard to every country in the world.

Today, the whole world is set up on VHF AM for aircraft. It wasn't
deliberately selected for any of the reasons most people claim except
for what the state of the art was at the time. Unfortunately, we
can't change it, even if we wanted to. Getting the whole world to
agree on any frequency or band allocations is like herding cats.

The countries of the ICAO can barely agree on distress frequencies.

Moving a whole band of VHF activity would be next to impossible. And
no, anyone suggesting yet another radio to an aviator, is greeted with
about as much enthusiasm as a skunk in a ballroom. The avionics stack
in most airplanes is quite heavy and complex enough, thank you.

So we're stuck with what we've got. It's adequate. AM works, though
I wish we could use FM for local Unicom or air to air traffic.

In truth, you'd detect a multiple transmit situation with either
modulation. And no, when two stations transmit simultaneously with
roughly equal strength you can't tell what either one is saying
regardless of whether you're using AM or the usual NBFM format. If
the signal is anything less than clear, it's awfully hard to listen to
over the roar of the engine and the slipstream.

Sorry- off topic, but...

I don't know about the headsets, but if you are in Yankee stadium,
154.6 MHz allows you to hear the folks orchestrate all of the "behind the
scenes actions" during the games. I remember on old timer's day
"Joe Dimaggio will come out of gate 3 in five minutes, and be transported to
the microphone stand located at the mound"
I told my friends to watch gate 3 at the time, and see what happens.
Scanners are definitely great fun at sporting events, and I hope
someone can identify the frequencies that you are interested in.

I agree with the left hand - right hand analogy. No one but an idiot would think the gov't in general and congress in particular is on top of every situation. And shouting that congress absolutely approves everything that gets done or spent is incredibly naive and astoudingly dumb. (Maybe a short history couse would help this poor person.)
And gee, I guess we should all be impressed by the credentials of the head of Australian Security. Probably the smartest guy that ever lived; an incontestable source for sure. Right. Why don't we get an opinion from the chief of security in India, too.
That's all.
Sorry if I offended anyone.

In the UK both the Fire and Police use a mixture of AM and FM at VHF,
they would all like to be on FM, but the areas that still use AM can
only afford to replace some of their equipment - not all of it, so are
forced to carry on with AM until the UK Government gives financial
assistance on a national system, possibly a digital system at UHF
(TETRA)..

Evidently Motorola doesn't agree with you....from their web site:

"ASTRO allows you to address the worldwide initiatives focusing on improved
radio spectrum efficiency. It provides both analog operation as well as
narrowband digital operation. This dual mode capability allows you to migrate
your system into the future of narrowband digital radio."

And if that wasn't enough we just got in a new shipment of 50ea to use with
our existing Type II 400mhz trunked system.....it's ALL
ANALOG!!!!!!!!!!....some even came with the crypto capability installed
(it's an Option!) !!!!!!!....so quit telling people it's a "digital ONLY"
system......and ya'all have a great turkey day.....

Hi John,

Yes, I just found that out. I was speaking to Bob Kelty (editor of
Trunked Radio Systems California) this afternoon and he informed me that
when it orginially came out in the 70's it had 5 channels. Today some
LTR Systems have up to 10 channels while others only have 2.

>(is that the right model #) mobile. And while I would be surprised if

OK....OK....OK....WHY does the 245 wait 4 and 1/2 seconds when in a trunked bank??........so it can listen to the data channel and see if there is any activity going on...it takes THAT long to identify an ongoing communication because the data channel repeats the status of all channels and talkgroups continuously...get the picture???....The PRO92 doesn't have this feature because it DOES NOT monitor the data channel, it looks for a channel with a signal on it and then uses the "digital tone burst" or bleep at the beginning/end of the transmission to find the next channel....so it doesn't wait 4.5 seconds as the 245 does on the trunked bank.......have we got it all understood now????...Good...Now the important part that should really be addressed is that Uniden STILL after all these years has not gone to replaceable "AA" batteries. That would be an order of magnitude improvement over ANYthing the've built so far.......there I said my piece..........everyone have a very happy Thanksgiving.....bye.....

The Pro-60 became my first handheld scanner when I bought it on closeout from RS a few years ago. The display is a little dim compared to more recent units and it's not the most sensitive radio in the world, but aside from that it's been a very nice little radio. It'd certainly say it's worth $75.

I use by BC245XLT for most of everyday scanning, since most of the major systems around here are trunked. But I still keep the Pro-60 at my desk for most of my conventional scanning. The direct entry mode and the monitor channels are particularly handy when you're checking out new frequencies, and the mil air frequencies are also nice to have. Rich Wells' site (http://www.strongsignals.net/htm/radios.htm) has some specs and a review in his usual comprehensive style that you might enjoy.

Source record: 101537

For an "In Action" photo of these leather cases, see
http://rampages.onramp.net/~peabody/scancase3.htm

I have a handful of these, new in original Tandy packaging.
A flat $10 each includes postage.

Fits the Pro-43, 39, 60, 62 and 64 models. Leather with
belt clip and a perfect rectangular cut out to expose both
AC and charging jacks on the side of the aforementioned
models. Still in the original Tandy wrapper, including
silica package to remove moisture. Tandy introduced leather
scanner cases in its 1997 catalog, which left the 43 and the

39 out. I'm not selling them "as is" or anything, so send
it back if it's not what you had in mind and I'll return
your money. It will dress up your scanner and protect
corners from dings, dirt, etc.

Anyone looking for a portable scanner that covers from .5 Mhz all the
way to 1300 Mhz and has no gaps in between, this is the scanner.
1000 channels, AM, FM, WIDE FM.
Comes with owners manual, rubber duckie antenna, and telescopic antenna.

This scanner works very good, 100 %
I will sell it for $170.00 + $7.50 shipping.
contact me by Email if interested

I am pretty sure they're on the trunked system. EST doesn't have a lot
of radio communications, because they're hardly used.

I have a contact I can ask.

Alinco DJ-X10T is deaf above 1.3ghz and below 530khz.
On the other hand, the IC-R10 doesn't pick up this range anyhow.
On the other hand, the DJ-X10T can't get cell in USA.

From: Tim Stroud <stroudt@netexas.net>
Message-ID: <26191DCC40C8C5FC.D621DBAD49D40BB3.E0D38D3510C64EFC@lp.airnews.net>
Source record: 101543

I live in Bonham and have a 245xlt. I am trying to monitor the ETMC system in Fannin County. The frequencies in this area are 856.7125 857,859 and 860. The 857.7125 sounds like the control channel. It seems that I have done everything right but I can never pick up any traffic or ids. Interestingly enough, I was just listening to the data on the control channel and low and behold I hear traffic breaking in on the control channel. If I monitor the control channel, I can hear conversations in between constant data, but have yet to hear anything in trunking search mode.

Do you have any ideas what I am doing wrong....thank you.

The OLD cordless phones used the range from 1.6 to 1.7 MHz, which is used
today by standard Amerikan AM broadcast radio.

I can't speak to what your garage door opener's operating frequency was, but
it was probably in the range of your old cordless phone.

I have the same kind of problem today with my 2.4 GHz security camera system
each time I or one of my neighbors decides to nuke a meal.

I sent an inquiry to Yaesu tech support on this matter. Their reply is posted below. Apparently, requiring the manufacturer to block cell frequencies is no longer good enough for the FCC bureaucrats--now, all frequencies where cell images may appear have to be blocked as well... Yaesu response follows:

Yaesu Technical Support wrote:

Hello!

Thanks for the email. Due to FCC regulations regarding the interception of cellular traffic of any kind (fundamental or image), certain frequency ranges in the VR-500 have been blocked.
Rejection of cellular signals in the blocked ranges may not meet the new -80dB suppression requirement required to meet Type Acceptance requirements
(effective March, 1999).
There are no plans to change the frequency coverage of VR-500 at this time.
Best Regards, Mike Krueger - N6MIK, Yaesu Technical Support

My inquiry to Yaesu:

> At 11/22/99 09:42, you wrote:

Hello Chums

I would like very much the following frequencies
for my Yupiteri MVT7100 handheld scanner:

- Princes St Garden Park attendants
- LRT handheld bus inspector freq
- police Edinburgh handheld freq
- Edinburgh tourist warden freq
- bus and coach operators
- Edinburgh Airport personnel
- Edinburgh nightclub bouncers
- Edinburgh hotel freq
- Edinburgh Castle security
- Edinburgh City Centre toilet checkers
- and any other frequencies for Edinburgh area would be welcomed.

Will be happy to trade freq, I have as follows:
- high level overflights
- Dynamic Earth
```

- CCTV and shop/store detectives
- and other freqs

cheers, Jim

4295. Re: FORECAST THE FUTURE OF SCANNING

Newsgroup: rec.radio.scanner
Date: 1999-11-23 00:00:00 UTC
From: Greg Dean <N9NWO@AMSAT.org>
Message-ID: <iLo_3.1099$Ne3.41405@dfiatx1-snr1.gtei.net>
Source record: 101614

: Depends on your location. However regardless of your location you'll
won't see
: the Coast Guard too 100% digital as they still value the help of everyday
: people. I listen to them a lot along the East Coast and they appreciate
and
: manytimes ask for help from other civilian boats and planes. I regard
them
: with the highest respect because the respect the people they serve.

I see digital as the primary mode in the future, even for Hams. It gives
better clarity and better coverage. In time, it will make it into the
civilian
markets. It is too easy to make a DSP receiver that decodes these
transmissions.
If no one markets it then the hobbyists will build their own.

: Now, the police....JackBootestThugs come to mind...?? Ok, I must admit
that
: not all are that way. However we are moving in that direction. Here in
: Pennsylvania the State Police will be ASTRO-Crap soon, but not a biggie as
most
: police activity is conducted by local and city police. Here in Lancaster
: County (and city) PA we're not even trunked and I don't see it in the near
: future. In many cases it appears the lancaster police do repect the help
they
: recieve from us scanner owners. I know I've help in locating the "bad"
person
: on more than once.
:
: However in Philly, its a different story. Soon that city will be digital
and
: the police regard themselves as 2 steps above God. Quote from the Police
Chief
: in Philadelphia the other week "Citizens have no need to hear us, its none
of
: their busiess". Thank God I no longer work near Philly and soon I won't
be
: living in PA!

Digital isn't that big a deal. Cops like their toys. They like being the
first one on the block with the new toys. Besides, chiefs are political
animals which makes them a little stupid.

: I listen to some rail and I don't see them spending the money for Digital,
plus

: with the remote locations their traveling through I can't see 800-900MHz
: working well for them without a TON of repeaters.
:
: And Aviation will never be 800-900 MHz in our life time. Aircraft are
still
: and always will use AM. I don't think you'll ever see aviation go FM, too
: costly and just not needed (been a pilot for 10+ years and we don't need
FM, AM
: works, not break whats not broken!)

We need to move aviation commo to the 225 to 300 Mhz range
so that it will be beside military aviation commo. Besides Nav
transmissions are moving to GPS so the freqs are not needed
down there.

: Now, my question, how many of you are scared of a police force in which
they
: want to keep ALL their communications secret? I CALL THEM THE SECRET
:POLICE!
:
: I ticks me off to no end when police want to do digital simply to keep law
: citizens from listening. Its scary that the police want a more secure
: communictaions system than the military!!!!

You got it wrong. Cops want to hide the fact that they talk
racist bullshit and talk about women on the radio. Before
scanners, cop radio was more like CB.

4296. Re: VR-500 Holes

So the solution is...get rid of those stupid old analog phones, go for a
digital system and the 'holes' won't be needed!
That's one of the reasons scanners in this country are not blocked.

Hello everyone:

I'm new to scanning. I have a Radio Shack Pro-51 and can't find the manual for it. I live in Houston, TX and have about 10 numbers programmed into it, they were programmed about 2 years ago. I can hear emergency calls by police and fire and a few cell phone calls.

Where can I find numbers to program in for the Houston (prefer NW Houston) area? What about cell phone freq. numbers?

Any help on locating a manual would be greatly appreciated too. Thanks for your help in advance. I enjoyed reading the newsgroup. Real new and don't understand what some posting mean, but I'm learning.

Thanks

Kathy

John,

For $75 you got a GREAT buy. The Pro-60 is an excellent radio. I have one now, but over the past few years I've owned AORs, Sonys, Unidens, Icoms and pretty much everything else. Some have more features, but the Pro-60 is as strong a receiver as any of them.
If you can find a Pro-2045 base model scanner grab it, too. It makes a great complement to your Pro-60.
If you're interested in military monitoring then you should join MilCom, the e-mail listserver dedicated to military monitoring.

To join:

Send an e-mail message to: majordomo@qth.net
In the subject put: milcom
In the text area put: subscribe milcom

That's all there is to it. You should start receiving messages within a few hours.
To post a message to the list members address it to milcom@qth.net
We have members all over the country, in Europe and Japan.
For help finding frequencies in your area just post a message stating your location and requesting frequency help and you should get some answers.

Well this is just thrilling! You **may** sell your PRO2006 **if** the offer is good. We're supposed to jump for joy, I suppose. What do you think--perhaps some sucker will offer you more than it's worth so you've decided to be cute? Maybe you are unaware that you can buy PRO2006 easily so you think you've got something special that we're all dying to buy.

If you plan to sell it, post it for sale with an asking price. If the price is reasonable, although I doubt that it will be, someone may want to buy it. Otherwise, run along and stop making a jerk of yourself.

I think those frequencies were only valid up until September of this
year. They most likely came from one of the following sites:

http://www.lcblanton.com/dfw/dfwpsafe.htm

http://ourworld.compuserve.com/homepages/brennan/e1311.htm
http://ourworld.compuserve.com/homepages/brennan/e1310.htm

From what I hear DFW Airport and the City of Irving have swapped
frequencies with each other. Have a look at the following page:

http://www.lcblanton.com/dfw/irving.htm

Hi I am in North Ontario Canada, and hear the USA all day .

at approx 7 am anywhere in 30 - 46 MHz I hear Police / FIre

From Flordia..then in 12 hrs I hear the west coast....like a curtain closing the skip is heard from East to West as the day goes on.

However as of late , conditions has been bad if it isnt noisy (Even on HF) the signals are simply not there.

You could be exp an INVERSION...this wont last very long...grab all the Dx you can ! ;)

Good Signals !

>We need to move aviation commo to the 225 to 300 Mhz range
>so that it will be beside military aviation commo. Besides Nav
>transmissions are moving to GPS so the freqs are not needed
>down there.

Why do we NEED to move Aviation to 225-300???? I'll bet it doesn't happen in our life time..... 10 years ago the FAA said they were going to shutdown the VHF nav aids in 6 years. That was 4 years ago and it aint near happening. Just 2 years ago they started establishing GPS approches. Heck, the FAA still operates NDB's (Non-directional Radio Beacons) in the LF (200-400KHz) areas and since there are over 500 airports in the US who's ONLY Instrument approach is an NDB, I bet they stay for at least another 20 years.

You must remember the aviation community enjoys thing that WORK and the VHF system works VERY well. The aviation community is NOT a community that jumps on the "new toy" band wagon.

Now, digital radio for police. I've ready many reports in which the cops currently using trunk systems (analog and digital) HATE them becuase of too many dead spots. In Miami the top dog Fire Chief after a week of using trunk demanded (and got his way) they go back to their older system. He was quoted saying "the new system is UNSAFE for our firefighters!".

I think that's an excellent idea, Jeff. I have an Astron 35A supply with an MFJ multiple outlet strip. It powers a 100watt HF radio, a 50watt 2m rig, scanner, a HF receiver and a homemade alarm system. All from one wall plug. Just to be safe I put a high quality lightning/surge protector inline with the power supply.

Want a real "shocker". Put a voltmeter across those "12vdc" wall warts. You'll be surprised how high a voltage reading most of them have with no load. Most things advertised for 12Vdc actually operate on 13.8vdc which is what's found in an automobile environment. Doesn't hurt to check the spec sheet on each device. Also, if you're really concerned, many of the better power supplies have an internal adjustment so you could adjust the voltage down a little. Warning, you may loose some performance by doing so. Some audio power and RF power in transmitters may be a little less than advertised at lower voltages.

I generally only buy things from Radio Shack when a) I need it right away or b) it's on sale. Look on the web at places like hamradio.com and aesham.com or any number of mail order electronic supply places.

Alf

I wouldn't spend the money on a radio shack power supply.

I don't mind if they offer something, what I can't stand is when they don't listen to you.

I was in RS just yesterday, looking for a dual band 2 meter/440 antenna for my truck. I specifically told the clerk the range, and that I wanted anything but glass mount. The very first thing he did was pull out a glass mount. Then, when I'd shot it down, he went to the catalog. I guess the manager was bored, because she came over to help him out. I repeated my request to her, stressing the 2m/440. They both kept trying to show me CB/10M dual antennas, and I kept having to tell them NO, that's not what I wanted. Finally I gave up, said I'd just pick one up later.... from another company.

I HATE it when the sales people don't listen to you....

wrotf:

>I agree! That's almost as bad as when Icom initially started blocking out
>the entire 800.0000~899.9999 MHz portion of their IC-R1, IC-R100, IC-R7000,
>and IC-R7100, because they didn't know how to block only the cellular
>portion of the spectrum.
>
>Bill Crocker

Actually this was done to keep on selling these radios. Icom could
not just remove the cell frequencies in that design as the microcode
in the CPU was not programmed and product engineering was not designed
for the removal of just the cellular bands. Remember the 2SRA, 4SRA
and W2A were removed from the market all together shortly after the
ban took effect in 1994.
The R1, R100 and R7100 sales were virtually stopped until Icom could
make the change, the R7000 wand R9000 went onto Government sales only
in the US.
What eventually happened all these products were replaced by newer
products. With the R100 being the last one to be recently
discontinued. Icom figured it was better to spend engineering monies
on new products. Also the R7000 never was blocked for United States
versions, it was just not sold to the consumer market place after the
last before April 27,1994 in stock radio ran out. During that time so
long as you could prove the products were imported before 4-27-1994
you could still sell them after the ban. Those products ran out pretty
quick after that date though.

2 Motorola MTX 9000 portables that are on the 900 mhz ham band in
conventional mode.

These are the B5 models with 6 button keypad and LCD display.

1 is in good shape. The other has a bad display and the case has
somenumbers carved in
it.

Both work fine. I use the one with no display as a 16 channel radio by
just using the
numbers on the channel knob. God bless you if you can find more that 16
repeaters in
your area!

I only have 1 fast charger but the batteries are late date code with
spring belt clips and 1
extra battery.

$300 for everything and I will program or let you do it with my help.

I also have a Motorola Maxar trunking radio that was converted to
conventional ham band
use. I want $300 for it since there is a lot of work involved to
convert radios to 900 mhz.

Haven't seen it but does it have a powered pre-amp? If so it should
work pretty good as I have used pre-amps with a full antenna before and
it just overloaded the radio. If you use one of these aftermarket
preamps, you need to use a minimum of antenna as they are designed to be
used with nothing so they make them real hot.

ACARS sends its data packets over an aircraft's AM radio.
What kind of audio encoding scheme is used to send the binary data?
Is it AFSK or some kind of pulse pattern?

I have read some articles on how to decode the binary data,
but haven't seen anything on how to actually turn the audio in to the
binary signals in order to process them.

Ohhhh that's nasty. Deceptive advertising and all that. If you
purchased one of these things I wouldn't wait too long for Yaesu to
fix it. A class action lawsuit may be in order...

/* FLAME ON */

Changing the subject: GENTLE READERS, THIS IS WHAT HAPPENS WHEN YOU
DON'T WRITE LETTERS TO THE FCC!

I posted the comments I wrote to the FCC concerning Docket 98-76 on
this news group over a year ago. I can bitch about this regulation,
knowing I did my civic duty to keep it from happening.

You should also know that Tandy posted comments against that Notice of
Proposed Rule Making as well.

This regulation happened because Uniden petitioned the FCC. That's
right: This bullshit regulation was actually proposed by a scanner
manufacturer!

So although we have every reason to be angry with Yaesu, the real
guilty party here is Uniden AND EVERY SINGLE ONE OF YOU WHO SAT ON
YOUR HANDS WITHOUT WRITING A SINGLE COMMENT AGAINST THIS REGULATION!

Politicians will do whatever they want until enough people squawk at
them. You all complain about this, yet when it comes time to actually
do something, most of you just sit there.

The Ancient Greeks had a word for people who opt out of the democratic
process: they're called "idiots."

/* FLAME OFF */

I'm sorry, folks. This pisses me off more than I can say.

It's time to go underground. Psst, anyone wanna buy a cable TV
converter?

I found a nice little add on that could be of use to both the SWL and Scanning community. At a local "Goodwill" trift shop I found a "Fisher-Price" baby monitor. A "base" sation that plugs into the wall(110v) and the remote, an HT or small scanner sized receiver.
I have toyed with the idea for some time of rebraodcasting my SW or scanner so I could listen while doing yard chroes or just n another roomm reading or whatever. While I have used a kuldge setup using some ATUS wireless microphone and reciever, at 169MHz these causes some interference to my scanning. Since the babymonitor operates in the 49MHz cordless telco range, and since I already have more than enough grief in my life to not want to listen to mynieghobors problems, it is no lss to me to lose 49MHz.
The base station has a built in microphone, "permanetly" attatched antenna and just plugs right into a wall outlet it can be used as it comes, just picking up the audio form your receiver(s) and re-broadcasting them or you can add a 1/8/(3.5mm) jack, a level control, a switch to cahnge from microhpne to "line" and I added a +!2V power jack and mounted a female BNC connector on top to allow a better (ie longer) antenna.
Total cost was $3.00 for the Baby monitor [base and remote] and nothing for the mods as I have a well equiped junk box. I had considered moding a 49MHz headset "communicator" or evn a FRS but at $3 this is a great option and with a real scanner instead of thier remote, and using an external 1/4 wave I can cover the whole area. OF course it will mess up some peoples older cordless telcos, but with the stock antenna I can easily reach 200' in all directions. There is a very weak 2nd and even weaker 3rd harmonic, but neither is strong enough to interferre with any thin I normally listen to. The base uses a rd overtone so it has a fairly strong signal on 16+MHZ, but even it does not cause any problems.
While I have found this setup to be of great utiltiy, others might not.
YMWV

Message-ID: <S2W_3.10291$wG3.643774@typhoon.nyroc.rr.com>
Source record: 101454

For Sale:

Realistic PRO-2006 scanner with these enhancements:

25,600 channels (64 blocks of 400 channels)
Keyboard Memory Block Controller
Commtronics HB-232 interface in external box (and upgrade kit for CE-232)
Original HB-232 software
Registered copy of Pro-Turbo software (allows computer control of scanner via HB/CE-232 and logged audio recording, slow trunk tracking w/additional modification)
Full receive coverage restored
Discriminator tap routed to "Tape Out" jack on rear panel
AC transformer removed (runs on 12 VDC only)
TCF-4 Tode/Code finder and decoder (CTCSS and DCS, up to 10 tones/codes per channel)

There are also two switches (momentary-contact pushbutton, 2-position toggle) mounted on the top cover that can be used to control any internally mounted add-ons.

Will sell as a package only. Asking $450 o/b/o.

I have too an AOR-5000 and I have had a ICOM R-8500 .The AR 5000 is more complicated and more little but the sensitivity is better on the all bands and up to 2,6Ghz with many user enable options.

There was a mod published awhile back where you installed a switch and wired it to the discriminator and I don't know what all else, and when you flipped the switch EVERYTHING would be in AM mode. Of course, if all you were monitoring is Milair then it would be okay.
The preferred mode is to turn the 890XLT into a doorstop and buy a used Pro-2045.

Howdy's

I have a good condition Pro-26 scanner for sale. You know it, you love it. If not 200 channels, cell modifiable, up 1.3ghz. No manual, does not have stock ant or belt clip(same condition I bought it in) Radio shack does have the manual posted on their website however.

First $125 takes it

Small FLAME ON

I don't know about everyone else, but I am getting tired of this.

MAYBE means perhaps

WERE means
were (w&#65533;r)
v.

Second person singular and plural and first and third person plural past
indicative of be.
Past subjunctive of wish.

Perhaps you meant

we're (w&#65533;r)

We are.

Although this is listed in some dictionaries, I believe it is a 'modern'
addition to the language.

The correct spelling is:

They may be watching, but we are listening.

Small FLAME OFF

I have two of the 20-032's, and they aren't worth diddly for 800mhz.
I use a mag mount cell phone antenna for all my mobile scanning.
Yes, it works on low vhf too.

I've also owned both. I'd say the AOR is better suited for scanning; the Icom is better suited as an all purpose receiver. Haven't looked at prices lately but I thought the AOR was $400-$500 more than the Icom (at least the 5000+3 is). There's a better choice of software for the AOR, but the basic Icom software does make it easy to drive the radio.

> ??? My news server has one at 4:08, two at 4:11 and one at 4:19. Which
> *one* was the mistake? :)

I don't know. Both ISP's that I use, Earthlink and SNET, they only have two, 4:08 and 4:19. The two at 4:11 don't exist on either machine. I've been on Usenet since 1993, and I thought I knew how to post an article. The article was attempted to be posted to the SNET server, which failed to respond to the post, obviously the article WAS posted. The article was then posted to the net via Earthlink's equipment.

I am soooo sorry for wasting the 7 seconds of time that it would have taken you to download the additional 3 headers and click the "next" button.

I'll try to never do it again. As I understand the hardship it probably caused to you, your family, and your entire hometown. I hope the three line articles didn't cause your hard disk to overflow, smoke, and burn up. Again, I'm very sorry.

Have a Happy Holiday,
Barry

Hello All,
I Still Have a Icom W2A Dual Band HT for sale.
It has box, manual,newer batt,antenna,charger,and belt clip,
unit is in great shape no wear on the keypad, and no scratches on the
display, I used it more as a scanner than a two-way and in a case most
of the time.
It has extended RX and TX
I would Like $190 SHIPPED for the unit
This is a classic pre ban radio with fell 800 MhZ!
I have just accumulated too many radios
and this was one of the odd ones out!
If intrested or for PIX
contact
tiny2nz@jorsm.com
Thanks Tiny

FDNY 10 codes
10-1 CALL YOUR QUARTERS OR OTHER UNIT
10-2 RETURN TO QUARTERS
10-3 CALL DISPATCHER BY TELEPHONE
10-4 ACKNOWLEDGMENT
10-5 REPEAT MESSAGE
10-6 STAND BY
10-7 VERIFY ADDRESS/LOCATION

10-8 IN-SERVICE BY RADIO
This signal is also used when the AT/SP is not in service
and a unit is leaving quarters.

CODE 1 Used only by a Division or Battalion to indicate it is in-service by radio when leaving a quarters other than its own at which it had been off the air and to which alarms had been routed.

CODE 2 Used by any unit to indicate it is on the air outside its response area. When the unit returns to its response area, the dispatcher must be notified again using 10-8.

10-9 OFF THE AIR
A unit will be out of radio contact. (State the reason: entering tunnel; visiting quarters; at a fire or emergency, etc.) A 10-8 is to be transmitted, with code if necessary, when contact is reestablished.

10-10 UNIT LOCATION
A request is made for a unit's location. The unit is to acknowledge by giving its present location.

10-11 RADIO TEST COUNT

10-12 PRELIMINARY REPORT
A request by a chief officer or dispatcher for a preliminary report by the first arriving unit. The dispatcher shall relay the report to the responding units.

10-13 FIRE MARSHALL NEEDS ASSISTANCE
Urgent Assist by NYPD.

10-14 ROSTER STAFFED ENGINE COMPANY
Use by roster staffed Engine Companies when acknowledging a structural response.

10-18 RETURN ALL UNITS, EXCEPT 1 ENGINE AND 1 LADDER
Transmitted for a fire or emergency, when in the judgment of the officer in command, conditions indicate that 1 Engine and 1 Ladder company are required. No further assistance is necessary. If the required unit(s) has not arrived, they will be notified by the dispatcher to continue responding to the location. Other responding units shall return to quarters or previous activity. The Battalion Chief need not continue to the scene after a 10-18 has been transmitted unless he deems it necessary. This decision must be based, in part, on the experience level of the officer transmitting the signal. Battalion Chiefs are to notify the dispatcher that they are 10-8 when not continuing in on a 10-18.

10-19 RETURN ALL UNITS, EXCEPT FOR 1 ENGINE OR LADDER
Transmitted for a fire or emergency, when in the judgment of the officer is command, conditions indicate that 1

Engine or 1 Ladder Company is required. No further assistance is necessary. If the required unit(s) has not arrived they will be notified by the dispatcher to continue responding to the location. Other responding units shall return to quarters or other activity. The Battalion Chief need not continue to the scene after a 10-19 has been transmitted unless he deems in necessary. This decision must be based, in part, on the experience level of the officer transmitting the signal. Battalion Chiefs are to notify the dispatcher that they are 10-8 when not continuing in on a 10-19.

10-20 PROCEED AT REDUCED SPEED
No warning devices are to be used and all traffic regulations are to be observed.

10-21 BRUSH FIRE

10-22 OUTSIDE RUBBISH FIRE

10-23 ABANDON/DERELICT VEHICLE FIRE (ADV)
A fire in a vehicle which has no value other than salvage and no owner can be located.

10-24 AUTO FIRE
A fire in a vehicle with plates or in any vehicle having a value greater than that of salvage.

10-25 MANHOLE or TRANSFORMER VAULT FIRE

CODE 1 Fire has extended from the manhole or conduit into a building.

CODE 2 Fire has blown one or more manhole covers, or smoke is issuing from a manhole under pressure.

CODE 3 Smoke is seeping from a manhole.

10-26 FOOD ON STOVE

10-27 COMPACTOR FIRE
Fire has not extended from compactor or shaft.

10-28 SUBWAY OR RAILROAD SYSTEM - FIRE, EMERGENCY OR SMOKE CONDITION (CODE REQUIRED)

CODE 1 NYCTA.

CODE 2 Other than NYCTA.

10-31 CLOGGED INCINERATOR
Fire has not extended from shaft.

10-32 DEFECTIVE OIL BURNER
Fire has not extended from fire box.

10-33 ODOR OF SMOKE
A smoke condition caused by a nearby working fire or fires such as barbecues, salamanders, etc.

10-34 SPRINKLER SYSTEM EMERGENCY

CODE 1 Defective sprinkler device or system (defective alarm valve, broken pipe, etc.)

CODE 2 Unwarranted sprinkler alarm. Not defective (surge in pressure, people working on system, etc.)

CODE 3 Sprinkler has been activated by heat source not associated with an accidental fire.

10-35 ALARM SYSTEM EMERGENCY
Other than a sprinkler system.

CODE 1 Defective alarm device or system.

CODE 2 Unwarranted alarm. Not defective (accidentally activated by cigarette smoke; low battery, etc.)

CODE 3 Recorded alarm.

10-36 AUTOMOBILE EMERGENCY
Any type of automobile accident or washdown of a fuel spill.

CODE 1 Washdown

CODE 2 No injury or washdown

CODE 3 Injury

CODE 4 Extrication

10-37 ASSIST CIVILIAN
First Aid or other call for assistance.

CODE 1 Victim deceased

CODE 2 Victim not breathing

CODE 3 Victim injured

10-38 STEAM LEAK

10-39 WATER CONDITION

CODE 1 Water leak in a structure.

CODE 2 Water main break.

10-40 GAS OR ELECTRICAL EMERGENCY

CODE 1 Gas Emergency. (Gas main leak; gas leak in structure; defective gas appliance, etc.)

CODE 2 Electrical emergency. (Wires down; sparking fixture; short circuit, etc.)

NOTE: Do not use 10-40 where the emergency causes a structural fire.

10-41 SUSPICIOUS FIRE (CODE REQUIRED)
Fire Marshall investigation is required.

CODE 1 Occupied Structure or Vehicle. A Structure (commercial, residential, public), or vehicle (car, bus or train) which is occupied at the time of the fire. This also includes a vacant apartment in an occupied building, or a store with a dwelling above.

CODE 2 Unoccupied Structure. A structure (commercial, residential, public) normally occupied which is unoccupied at the time of the fire.

CODE 3 Unoccupied Vehicle. A vehicle (car, bus or train) with or without plates which is unoccupied a the time of the fire.

CODE 4 Vacant Structure. A vacant building or building under construction or demolition. (If there are squatters or workmen in structure, transmit a CODE 1.)

10-44 PUBLIC AMBULANCE
A request for a public ambulance. Specify the reason.

10-45 DOA OR SERIOUS INJURY
Transmitted IMMEDIATELY upon the discovery of a fatality or serious injury at a fire or emergency. This shall be followed as soon as possible with the appropriate Code and the number of victims.

CODE 1 Victim Deceased

CODE 2 Victim suffering serious injury. (Apparently life threatening)

CODE 3 Victim suffering serious injury. (Apparently NOT life threatening.)

NOTE: Do not transmit this signal for minor injuries.

10-47 POLICE RESPONSE
Police assistance is needed for crowd or traffic control, security, apprehension, etc. (specify reason)

10-48 POLICE RESPONSE FOR HARASSMENT
Firefighters are being harassed a police assistance is needed immediately.

10-51 CANCELLATION OF OUTSIDE ACTIVITIES
Transmitted when outside activities are to be canceled. When the conditions that caused suspension of outside activities, the following message will be transmitted by radio, voice alarm and teleprinter: "All units shall resume outside activity forthwith."

10-60 MAJOR EMERGENCY RESPONSE
Transmitted for a collapse, airplane crash (except airport crash boxes 0037-LaGuardia Airport, and 0269-Kennedy Airport) train derailment, or similar emergency with the potential for multiple casualties. The following will respond. 3 Engines, 2 Ladders, 3 Rescue Companies (including rescue with the Collapse Unit) 5 Battalion Chiefs, 1 Tactical Service Unit, HazMat, Field Communications Unit, Squad Company 1 with Technical Response Vehicle, 1 Deputy Chief, 1 Safety Battalion.

10-70 INLINE PUMPING IS IN USE
A notification to responding Engine Companies that inline pumping is in use and may require augmenting.

10-75 NOTIFICATION OF A FIRE OR EMERGENCY
A notification signal transmitted when, in the judgment of the officer in command, conditions indicate a fire or emergency that requires a total response of the following units: 4 Engines, 2 Ladders, 2 Battalion Chiefs, 1 Rescue Company (Enhanced Engine or Squad Company if closer). Officers transmitting a 10-75 shall also state if it is for a fire or emergency and if a building is involved along with the type of building.

10-76 NOTIFICATION OF A FIRE IN A HIGH-RISE BUILDING
A notification signal transmitted when, in the judgment of the officer in command, conditions indicate a fire in a high-rise building that requires a total response of the following units: 4 Engines, 4 Ladders, 4 Battalion Chiefs, Engine 3 and High Rise Unit, 1 Deputy Chief, Field Communications Unit, 1 Rescue Company, Mask Service Unit, PIO, Command Post Company. (restricted use of Citywide frequency, for operation of High-rise repeater)

10-80 HAZARDOUS MATERIALS INCIDENT
The Initial notification by field units of a hazardous materials incident. Responders are to proceed with

caution to avoid entering a restricted area. Code will transmitted by the Incident Commander after size up and evaluations of the incident.

CODE 1 An incident confined to a small area and which does not pose an immediate threat to life or property. Can be controlled by a unit or units up to and including: 3 Engines, 2 Ladders, and 2 Battalion Chiefs.

CODE 2 An incident involving a greater hazard or larger area which posses a potential threat to life or property. Following units will respond: 3 Engines, 2 Ladders, 2 Battalion Chiefs, 1 Deputy Chief, HazMat Company 1, 1 Safety Battalion and Field Communications Unit.

10-84 UNITS ARRIVED AT SCENE
All units shall IMMEDIATELY transmit a 10-84 by Radio or MDT when arriving at the box of the incident. Other signals should not be given with the 10-84 except where the situation is apparent on arrival. This signal must be followed within 5 minutes by a preliminary report including the appropriate radio code signal or additional information by first arriving unit. Fire commanders and Chiefs within their command are to take necessary steps to insure that units are transmitting the 10-84 signal for responses. Chief officers shall transmit a 10-84 upon their arrival at an alarm.

10-85 FIRE MARSHALL REQUIRES ADDITIONAL UNITS
Used for additional units (other than NYPD - See 10-13)

10-86 FOAM OPERATION
Transmitted for a fire or emergency requiring any type of foam concentrate in addition to that carried by units on the scene. The following are to respond: 2 Foam Carriers, 1 Satellite Hose Wagon, 1 Foam Coordinator (Battalion Chief).

CODE 1 Maximum amount of Flouroprotein foam required. In addition to units on the 10-86 the remainder of the Foam Carriers and all Bulk Foam Units will respond.

CODE 2 Flouroprotein foam required. In addition to units on 10-86 the remainder of the Foam Carriers will respond.

CODE 3 High Expansion Foam required. The High Expansion Foam Unit will respond. Units on 10-86 will also respond.

NOTE: On all Special Calls for foam (Foam carrier or
High Expansion Foam) the associated Engine
Company will respond with both pieces of
apparatus and all members.

10-91 EMERGENCY; FD NOT REQUIRED.

10-92 MALICIOUS FALSE ALARM
Indicates that a false alarm was transmitted with
malicious intent.

10-99 UNITS WILL BE OPERATING FOR A LEAST 30 MINUTES
An operating unit or all units at an incident will be
unavailable for at least 30 minutes. The unit(s) is to
state the reason it will not be available.

hi name hr is denny.we live in oxnard ca. i have two scanners 4sale .
a pro-2036 200 ch base scanner. has manual & ant, ext pwr supply. it is in very
good to almost exlt cond. $125.00 plus ship&insur.

a uniden bearcat 350a moble/base. 50 ch + it a new demo. comes with alot of
extra things: ant fer indoor home use, extrl pwr supply, cig lit plug, fused
leadblack and red wire,moble mt braket,suction cup ant (can mt on window),it
is an over looked unit, for the $$$. and if you live in a area that dose not
have 800mhz.and cell is no big deal! $50.00 plus $5.00 ship&insur.

or my xmass deal : buy both fer $ 150.00 and $10.00
ship &
insur.

i don't think any one can beat this ?!!

please call (805) 488-7622 or e-mail me: ddubsky@aol.com tnx

good scanning and have a great thanksgiving.

>would have had your scanner with you, who knows.

And we'll have fun, fun, fun, 'till my daddy takes my scanner away!

There are at least three reasons for scanner listening.
1. Professional use
2. Ham use
3. Fun.
I subscribe to all three.
Al

it's a good idea. I've also used a rig like this to follow television broadcasts of NASCAR races and other nationally televised sporting events that are not on the radio -- so I can listen to them while working the the yard.

RS uses this information to build a customer database. Who buys what and to examine your credit to see if you are worthy of their high interest credit card. To my knowledge (as an ex-store-manager) they sell the lists of information they gather as do most corporations.
It's a pain in the ass for the employees to because the computer tracks whether or not the employee gathers that info and is graded accordingly. In most cases I would just smile politely and say you'd like to pay cash or what ever and move on. Their just doing the job their paid to do.

OK, let's step it up a bit....

We have a multi-site SmartZone system here, and each site uses the same System ID. Seperate sites do however report different Connect Tones. I was under the impression that the RSS would only allow a single Connect Tone per System ID. If this is correct, then how do various sites in the SmartZone System have different Connect Tones?

I'd bet the Pro-94 will never go back above $199 with all the complaints and returns going on. The local RS here sold six so far and they have four of them back...

Might be wise to just get your $199 back...

Aside from a few relatively minor complaints folks seem pretty happy with the BC245XLT, and personally I like mine just fine. Do a search for my "random obseravations" posting earlier in the week. Sure, alpha tags would be nice, but frankly having a trunktracking scanner that actually tracks something reasonably well is more important to me. The 5-second delay really isn't all that signifigant for me and hasn't proved bothersome so far.

> I to was waiting for the Pro92, But boy am i dissappointed from the posts

> Does anyone like the 92?

I'm sure some people are happy with it...somewhere. You may want to subscribe to the Pro-92 mailing list over at http://www.onelist.com there's quite a bit of traffic and some interesting discussions.Unfortuantely most of the posts so far have also been quite negative, at least as far as the scanner's trunking features go. As a conventional scanner it sounds pretty good, but it seems kind of expensive for a just a conventional scanner with (apparently) limited computer control, even with alpha tags and tone decoding. Still, I may buy a Pro-92 from RS when they finally come in, just to play with it until the 30-day limit is up. I doubt that I'll keep it.

Source record: 101550

I bought one at Circuit City and after a week of use, plan on bringing it back. My ATT 10 channel tape equipped 15 year old cordless phone answer machine sounds better than the Uniden. There is a constant high pitch hum on the handset. The voices are loud, which is good, but doesn't neutralize the annoying hum. The features of the phone are great... can dial from handset before going on line, but answer features mediocre at best. Plus the answer machine has poor quality sound. I played a message from my wife 3 times and could not understand the phrase "food processor". I paid about $190 for the combo phone/answer machine. Even if it cost less than half, it would not be worth it, in my opinion. Is that strong enuf? The only hopeful thing I can say is that hopefully I got an early production model. By the way, I also tried a Casio DSS combo, great answerer but the cordless phone had very poor volume. A good deal at $69 if you have Superman's ears. What is wrong with these manufacturers?

4388. FS: Icom R7000 Communications Receiver

Newsgroup: rec.radio.scanner
Date: 1999-11-24 00:00:00 UTC
From: jimdpeters@aol.com
Message-ID: <19991123234805.17069.00001575@ng-fn1.aol.com>
Source record: 101559

I have the following Icom R7000 communications receiver for sale. I have two of these and want to sell one of them. "See picture" I will give you the choice of either radio. They are both in EXCELLENT condition except the top radio in picture has a meter light that is not working.

<A HREF="http://members.aol.com/jimdpeters/icom7000.jpg">For Picture of the Icom R7000 Click Here</A>

Considered by many to be the top of the line VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB, AM, NFM & WFM allows reception of most everything you want to listen to. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recording.

IC-R7000 SPECIFICATIONS

Frequency Coverage 25. MHz to 2000 MHz. "with a gap between 1000 MHz & 1025 MHz".
Mode: Upper & Lower Sideband, AM, wide FM, narrow FM
Memory Channels: 99
Tuning Step Increment: - 0.1, 1, 5, 10, 12.5, or 25 kHz.
Power Supply Requirement (U.S.A): 117 Volt AC
Usable Temperature Range: +14ï¿½F ~ +140ï¿½F
Dimensions: 11.3(W) x 4.3(H) x 10.9(D) in
Weight: 17.6 lbs.

The R7000 has (6) seperate scanning functions:
1. Priority Scan
2. Programmed Scan
3. Selected Memory Scan
4. Selected Mode Memory Scan
5. Memory Channel Scan
6. Auto-Write Memory Scan

The receiver comes with the original box and styrafoam packing, and owners manual. The radio's have been in a non-smoking environment. I'm asking $750 for the radio. For that price I will ship it and insure it.

If you have any questions I will be happy to answer them.

4391. BEWARE Yaesu VR-500

Newsgroup: rec.radio.scanner
Date: 1999-11-24 00:00:00 UTC
From: Bruce & Robin <bah@gowebway.com>
Message-ID: <383B730E.EBBEEA0C@gowebway.com>
Source record: 101562

I have been contemplating buying a Yaesu VR-500 for some time now. I don't care very much about the cell band gaps, which I can live with, but I was a bit concerned about various reports that this radio had some mysterious coverage gaps OUTSIDE of the normal cellular gaps. It has been reported here and elsewhere of gaps in the low 800 MHz range as well as in various locations in the 600 and 700 MHz ranges. Hmmm...this seemed kinda strange since the Yaesu advertisements and web site all claim that this unit has "continuous coverage except cellular frequencies."

Well I emailed Yaeus tech support and got an eye-opener response back. It seems that, in order to comply with the FCC's new (as of March 99) -80 dB standards for rejecting cell images, Yaesu had to take the extra step of blocking various frequencies OUTSIDE OF THE NORMAL CELL BANDS!!! Apparently, these frequencies had too much cell imaging, so FCC type approval wasn't possible. I guess Yaesu decided that better filtering wasn't an option, so it decided instead to just block the offending frequencies.

Of course, Yaesu does not explain this in ANY of its literature on the VR-500 radio. Everything I've ever seen on this radio from Yaesu claims "continuous coverage." Now, I understand that Yaesu has to do what it has to do in order to receive FCC type approval for its radio, but it should not attempt to sneak this past unsuspecting customers who think they are getting a "continuous coverage" receiver. What exactly did they expect to happen--customers wouldn't notice all of these missing frequencies??

It's bad enough having to shell out for a scanner that is missing the cell bands. Now they expect us to shell out for a scanner that's missing a bunch of other frequencies as well??? It wouldn't be so bad if Yaesu disclosed the extra gaps in their advertisements, so customers could make their own decisions about whether the blocked frequencies were that important. But trying to sneak this past customers strikes me as being an extremely distasteful business practice.

FWIW, I emailed Yaesu again asking for a complete list of the frequencies that are blocked on the VR-500. Have heard absolutely zip back from them so far.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have seen lots of posts asking basicly the same question. Why would anyone want to listen to fast food freq's?. A common answer is sonthing having to do with listening to employees inside saying things they only want each other to hear.

Okay, pull up to the fast food place and look to see if the person at window 1 or 2 is an attractive girl that you might want to get to know better. If she is, place the order and pull to window 1. Flirt just a little. If anyone who sees you thinks you are cute or witty or an idiot, they will comment on it.

Now you dont have to wonder "does she think i'm cute" or "should I approach her"

If you hear on your scanner "wow, he's cute" or somthing like that, go in the place, ask for more Katchup, and get to know each other.

This is a step below mind reading. It takes some of the guesswork our of cupids arrow.

Just think, there might have been dozens of fast food girls who might have wanted to take you home and throw you on the bed. If you would have had your scanner with you, who knows.

Chuck,

Are they the same as APD? (Albuquerque). Listen and see if you hear them checking 10-54 (or just 54) when they make a traffic stop. If I remember correctly, APD dispatches calls according to the crime classification. A robbery would be something similar to a 27-2, burglary 27-3, larceny 27-4. When I was in the academy, 12 years ago, I used to listen to SFPD. It's been so long I don't remember. I don't have a current Police Call to check for APD's codes. If this doesn't help in the slightest, email me and I'll dig up some contacts with SFPD and get the real codes for you.

It should allow you to upload/download frequency info PL/DPL tones,
and all the alpha-tags. Just no control features.

> Obvious candidates are the Yaesu VR500 and the Icom R10. Any others?

Yeah, the new Uniden SC200. Radio's out but the software will probably
be another few weeks. For $300, you can get the RE2000Alpha.

You must have missed the earlier posting from my
MT review:

"...Our DJ-X10T hears images of cellular phone signals clearly
in the 1419.9 - 1444.9 MHz range, 550.9 MHz above
their actual frequency. We measured a sensitivity
of 0.41 - 0.56 uV (12 dB SINAD) to these cell images...."

That's more sensitive than many scanners when tuned the
the 800 MHz signals they are designed to hear.

I agree! That's almost as bad as when Icom initially started blocking out the entire 800.0000~899.9999 MHz portion of their IC-R1, IC-R100, IC-R7000, and IC-R7100, because they didn't know how to block only the cellular portion of the spectrum.

From what I'm hearing from others, the remaining portion of the 800 MHz band, on the Yaesu VR-500, doesn't perform as well as the other bands, on that radio. Maybe Yaesu will re-program them soon.

I wonder what the new scanning laws will do with that product being
all scanning receivers now are required to have cell phone images
-38db down on any frequency it can receive. I'll bet you will see
more frequencies blocked from reception in scanners. The actual law
took full effect on October 25,1999.

OK, how about asking them to clone one of their 245's into yours? Or tell them to hand over the empty scanner and you'll take care of the rest. It's your money they're turning away. You can get a 245 at dozens of online stores these days, delivered via next day air for probably less money than the local dealer is charging

I never heard of a "programmer" at a scanner shop. That's a new one on me. (Interesting concept though. Maybe that's how they justify charging 25% more than the online stores do.)

Your are likely going to find that happening on more and more scanners
of various manufacturers. The cell image is now required to be at

-38db on any possible frequency the radio can receive. Many companies are now resubmitting existing products for re Type Certification from the FCC.

Also you are going to find they can not be modified for cell coverage either, most cases the ability is no longer in the CPU otherwise the manufacturer will have to apply a potting compound to the frequency determining components. Most were considering an epoxy substance for this. Potting would render, in some cases, the product non repairable.

It is very difficult to build " filters " for images as the signal is there and the filter would likely render the frequency range un useable anyway.

Don't like it.. write your congressman they are the one who did this not the manufacturers of the scanners.

The only negative thing I ever heard was if you scan across bands, i.e.; 40, 150, 450, 850 MHz, it has an annoying clicking, caused from band changing relays. This is typical of many Icom's under this circumstance, not really a fault of the IC-R8500. Other than that, it's a fine radio!

Bill Crocker

I have an Icom R-2 (actually I have 2 so I need to sell 1) for sale in the original box with all the original accessories. You get R-2, Nicad 700ma batteries, Nicad charger, Original manual and warranty card(not filled out and manual has a slight tear on the front cover), wrist strap, belt clip and another set of batteries in the radio. It is in like new condition and I have cloned it with my own for the DFW Texas area. I provide sheet listing all the current frequencies programmed into it. Since I have 2 I need to sell 1 it works super. I an looking for $200 which includes shipping to your address in the US. I will not ship outside of US. If interested please email me at: wild1413@msn.com. Since I am reducing my radios I do not wish to take trades. Thanks. Wayne.

>more frequencies blocked from reception in scanners. The actual law
>took full effect on October 25,1999.

It's a mixed bag. The new FCC cell image rule has already:

- improved the performance of receivers sold to the public.
No more image-laden 10.7/10.8 MHz IF double conversion
scanners with 800 MHz coverage (e.g., PRO-2022).
- caused at least manufacturer to omit parts of the spectrum
from their product (VM-500)

It will probably have these effects, too:

- make receivers more expensive to design, test, and manufacture
than they would have been without the regulation
- slowdown the introduction of new wide coverage receivers,
especially those which cover the vast 225 - 400 MHz
military air band

Heathkit scanner with the sequential light. Almost MINT condition and
it works. It has the 3 original telescoping antennas and covers low,
high bands and UHF.
A collectors find!

Realistic PRO-78 xtal scanner, works fine looks OK

I am not sure what they are worth but I know the Heathkit is sort of
collectable as all Heathkits are.

Make a decent offer or trade for a regular scanner (or someting else)
and they're yours!

I still like Alkalines because they are typically about 2750 Mah. I was buying Sanyo's at 27 cents each but found some Kodaks on the net at 13 cents each if you buy 600 but I found enough people to make that buy. If I would not have, they want 18 cents each for lesser quantities. It's a place in NY called (oddly enough) , Cheapbatteries.com. Previous alkaline tests that I've read have concluded that you should buy by price because performance was so close from the best to the last. I personally have found Walgreens brand to be one of the best and look for their 2 for 1 sales. Ray-O-Vac has been the worst for me. I have been recharging regular alks for some time now on a bench supply which is really not good because it is not a pulse charger but anyway I do it at 1.65 volts and when it drops to under 10 ma, I consider it charged. I seem to get approx. 2/3 of the orig. charge, the second time it drops to under 1/2 and after that it is not worth the effort anymore. You've got to go with low current here or the thing might pop so be careful. I'm still looking for a good price on C and D size alks but can't find any under 55 cents so if anyone knows better, please post here. I can find Eveready Heavy Duty D's for 10 cents but I consider them useless. They are Heavy Duty failures in my opinion.

>So the solution is...get rid of those stupid old analog phones, go for a
>digital system and the 'holes' won't be needed!

Scanners aren't required to be blocked anywhere except the USA. Canada
uses the same AMPS and PCS cellular frequencies as the USA, and there is
no requirement for holes in the 800 MHz coverage. Unfortunately,
most manufacturers build a single model for both the USA and Canada,
so we end up with the channels blocked anyway.

This is one good reason to buy an Icom IC-R2 instead of a Yaesu VR-500
in Canada - Icom *does* have a separate Canadian version with continuous
coverage, Yaesu does not.

(No, I don't listen to cellular phone calls. But I do listen to
cellular control channel transmitters to find cell sites).

Dave

For those who didn't read the actual review, they rated only alkalines and concluded "The moral on battery shopping is simple: Buy by price." The only test where they found a difference between brands was a simulation of high current flash camera use. They reported "In the tests summarized under 'moderate drain', all the batteries were rated excellent."

One note that caught my eye: "Batteries may be stored at room temperature. Refrigeration, we've found, only very slightly extends shelf life." It looks like I won't have to keep picking the AAs out of the carrots in the future.

Thank you all for your responses. I'm looking at the HRO web site
(http://www.hamradiostore.com/web/product.html) and I see the
following brands:

Astron
Icom
Kenwood
Samlex
Yaesu

Of these, the only "reasonably priced" brands become Astron and Samlex
(and the latter only has a 10amp switcher).

So then, does anyone have anything good or bad to say about the
"Astron" brand?

Thanks in advance,

-

I have used several Astrons over the last 15 years. They are well built and seem to hold up very well. About the only bad thing I can say about them is that some modles will go into what I call an over voltage lockup. Those modles have an over voltage circuit in them that sometimes get fooled by a sudden turning off and on. In the house that is no problem as all you have to do is turn them off for about 10 seconds and then back on. I had one at a repeater site about 15 miles from the house and when a thunder storm would come buy and the AC power would go off and back on in under a second or so it would lock up and I would have to go to the repeater and reset it. At your house that should not be a problem.

I have not seen all modles but do not get any brand that has a fan in it. There are a lot of them around. I had another brand, Tripplite I think , that had a fan. Was rated 20 amps and most of the time I only pullde about 2 amps so I put a switch on it to kill the noise.

While some of the switching supplies may be ok, I would go with the nonswitchers for use around receivers. The switchers sometimes generate RF noise that you can not get rid of.

Whatever you get, only plan on running it at about half the rated current full time. If you need 5 amps to do all the radios, then get one rated 10 amps. If you are going to use a transceiver where you will only pull the max current for a few min at a time, then you can get one where you only pull 80 to 90 percent of the rated current. The Astrons seem to be able to handle the higher maximum current beter than most other brands.

e have anything good or bad to say about the
> >"Astron" brand?
>
> Well shoot, I realized that two people have posted (one each) about

I was at DFW yesterday, 11-24-99, and used Ben Saladino's information,
< http:www.interplaza.com/scandfw/ttdfw.htm>
The information generally worked, but I did miss a few transmissions, and
the data channel did buzz following some conversations, thus preventing the
following of a conversation.

I'm curious as to why you wouldn't consider the OptoCom from optoelectronics
if your looking for a PC scanner ?

I have one and find it a fantastic unit. Using the optocom with my
pro2006/OS456
Has given me awsome results for scanning, trunk tracking, message decoding
etc...

The OptoCom IMHO is probably the best scanner a "True"
experimeter could want . It's and upgradable and feature packed.

What type of scanning are you looking to do ?

This is an idea that I also have toyed with. Check out:

www.cruthfield.com

and do a product search on 486SF120. This is a battery powered $25.00
device that plugs directly into a headphone/earphone jack, and rebroadcasts
on the regular radio band (it claims to rebroadcast in stereo which leads me
to believe that it rebroadcasts on FM). Now you can hear you scanner on a
normal radio, and/or amplify weak audio output while in the car.

HI Jon,

I agree. I haven't found many problems either. The only problem
that I have encountered are stray Talk Group Ids in LTR mode when
the signal is VERY weak.

The Pro 92 is very different from the Pro 90 and it took about 3
days to get use to it. I've been having fun tracking several of
the LTR Systems in the Bay Area and one EDACS System (NASA AMES),
which the Pro 90 could not do.

I have the R-8500 and a AOR AR-5000. The Icom is a fine receiver, very easy to use. I have absolutely no qualms about it. It does what it was designed to do but..... the AOR does alot more. It's a bit complicated at first and there is software for it. What I like about the AOR over the Icom is the ability to select different IF filters in any mode and it has a better selection of IF filters. Actually, I think the AOR is just a better receiver, it's kinda ugly, but more functional and costs about the same. If you want a good objective review go to

www.strongsignals.net

regards
EC

Hi,

Well, It's not exactly difficult to build a drop in AA battery holder that will fit the 245 out of some card or plastic sheet, tape, copper strips, wire, two rubber bands and a plug salvaged from an old cordless phone battery. I've done it and it works just fine. No modifications to the scanner are needed :-o))

I agree, the 5 second pause IS a pain, but not as much a pain as not trunk tracking Motorola properly on a busy system with dropped conversations and inaccurate IDs. The below compares the '92 and '245 tracking one such system. The results speak for themselves (and thanks to scannerdude for the effort)

Hi, I am looking to buy a scanner and want to know which one is recommended.
I want to listen to Air,police and fire channels, nothing to flash.
Something around the $250 Aus mark.

Thanks
Geoff.

Does it work with a plug-in power supply? - If so, then you'll
know that it's the battery connection. If there are prongs that the
battery pack touches, perhaps they're bent away from the point of
connection. As another poster stated, you probably WILL have
to open the case. Do it carefully and slowly; take your time and
look for any loose connections. If old batteries leaked acid into
the radio, it might have damaged something, causing the problem.

DANGER WILROBINSON - hadda say it.....I'm finding that the net
is a good resource for maps and FCC database info that can lead
to IDing stations. The FCC database URL is now

<haifoss.fcc.gov/beta/genmen/index.hts>

and various mapping programs exist like

<tiger.census.gov> or

<maps.excite.com/>

and of couse posting them here could bring good results.
I heard the Tennessee State Police on 39.58 from NYS a couple
of days ago, but IDing them was easy - heard "Nashville"
dispatching a unit!

I've got a US Atlas for tracking down things like "772 and 32", but
it helps to have an idea what part of the country it's in to narrow
it down (easier on the eyes).

Try to catch callsigns when you can - that'll help immensely.

>"Fisher-Price" baby monitor.....

You might enjoy my (old) article:

x
CONVERTING THE FISHER-PRICE BABY MONITOR INTO A REPEATER

Copyright 1988 by Bob Parnass, AJ9S

The Fisher-Price baby monitor (model 157) consists of an AC operated, low power FM transmitter, and a battery operated receiver. Both transmitter and receiver are equipped with 2 crystal controlled channels in the 49 MHz range. The unit modified for this article was equipped with 49.845 and 49.875 MHz channels, designated 'C' and 'D' respectively.

This modification allows a hobbyist to connect the baby monitor transmitter to the TAPE jack of a scanner or shortwave receiver and rebroadcast the transmissions in the 49 MHz range. One can roam around the house or yard with the portable baby monitor receiver, a portable scanner tuned in the 49 MHz range, or even a 2 meter walkie talkie tuned to the 3rd harmonic, listening to transmissions intercepted by a base receiver.

No changes are needed in the baby monitor receiver, although one could disconnect the red light emitting diode (LED) to prolong battery life. In the transmitter, we will be disconnecting the microphone and installing a 1/8" phone jack and DC blocking capacitor.

Parts needed for the modification:

- 1/8" miniature phone jack

- A capacitor with rating of 25 volts or higher. Use of the baby monitor with most receivers requires a 0.001 microfarad capacitor, e.g., a Radio Shack PRO-2004, PRO-2005, PRO-2006, Icom R-7000, R71A, or NRD-525 receiver. Older Bearcat scanners, like the Electra Bearcat BC300, BC220, BC20/20, or BC250 scanner will

require you use a 0.1 microfarad capacitor instead.

- insulated hookup wire

- solder

- heat shrink tubing or electrical tape

To modify the Fisher-Price transmitter:

1. Make sure the transmitter is disconnected from the AC line.

2. Turn the transmitter upside down and use your fingernail or a small screwdriver to remove the rubber feet, fastened with rubber cement. You should now see 4 Phillips screws holding the top and bottom of the plastic cabinet together. Remove the 4 screws and save them for reassembly.

3. The rubberized antenna and microphone are connected, using crimp on connectors, to pins on the printed circuit board (PCB). Using a needle nose pliers, temporarily disconnect the white wire that connects the antenna to the PCB.

4. Using a needle nose pliers, disconnect the 2 conductors of the shielded cable that connect the microphone to the PCB. Tape the ends of the shielded wire and stuff them back into the cabinet top. The microphone is disconnected to prevent the transmitter from repeating room noises. If you don't disable the microphone, you will be "bugging" your own house!

5. Remove the cabinet top and drill a 1/4" hole in the side of the cabinet top.

6. Mount a 1/8" miniature phone jack in the hole. Don't overtighten the nut or else the plastic case might crack.

Note: although most phone jacks have 3 solder terminals, we will be using only 2 of the 3 terminals.

7. Solder the end of a piece of insulated hookup wire to the sleeve terminal of the jack.

8. Solder the other end to the pin on the PCB where the microphone shield had been connected.

9. The original circuit placed a DC voltage across the microphone. We must add a blocking capacitor to prevent any DC from flowing between the transmitter and the scanner or shortwave receiver. Solder one end of the capacitor to the tip terminal of the jack.

10. Solder the other end of the capacitor to a short length of insulated hookup wire.

11. Slip a length of heat shrink tubing over the capacitor. If you have no tubing, you can use electrical tape instead. Solder the other end of the wire to the pin on the PCB where the microphone center conductor had been connected.

12. Reconnect antenna to the PCB.

13. Using the 4 Phillips screws from an earlier step, reassemble the cabinet top and bottom pieces.

14. Replace the rubber feet. That completes the modification.

Use a shielded patch cord to connect the Fisher-Price transmitter to the TAPE jack of your scanner or shortwave receiver. If your receiver has no TAPE jack, try connecting the transmitter to the earphone jack.

As a last resort, you could use the external speaker jack. If audio from the speaker jack overloads the baby monitor transmitter, producing distortion, use an attenuating patch cable to reduce the audio signal level.

The same modification has been applied to the PlaySchool baby monitor, which is housed in a different style plastic case.

If your neighbors have scanners, cordless phones, or baby monitors, they can probably listen in to your scanner, too!

OK, but take my advice, and observe the following 2 rules:

1.) Don't let her see the scanner. Such devices are like an
anti-aphrodisiac to the average girl, and the younger the girl, the
stronger the effect.

2.) Even if you end up marrying a girl you met this way, and having
kids with her, and living happily ever after in the 'burbs, never,
ever, ever tell her that you were eavesdropping on her that first
night. Trust me on this one.

For all you Battery nuts, I just got the December 1999 issue of Consumer Reports and they rated batteries: Here it is.

The Top winner that outperforms all others for AA size is
1) the Duracell Ultra MX 1500

then the list goes:

2) CVS 1500 (never heard of this drugstore brand)
3) Rite Aid
4) Kirkland Signature 96367 (Costco)
5) Duracell MN1500
6) Energizer Advanced Formula E91
7) Sears DieHard 93895
8) Radio Shack High Performance Enercell 23-874
9) Walgreens Ultra-Alkaline 805784
10) Eckerd 798181
11) Rayovac Maximum 815

For AAA size

1) Duracell Ultra MX2400
2) Duracell MN2400B4
3) Enerizer Advanced Formula E92
4) Sears DieHard 93891
5) Radio Shack High Performance Enercell 23-877
6) Rayovac Maximum 824

A few years back, I was using an ICOM R7100 with a Diamond 707
antenna. Over a period of a few weeks ,I received some amazing bursts
of activity between 29 and 50 mhz. Mostly, they were from North
America.
BTW, I am on the East Coast of Australia.
Transmissions were, mostly, emergency services and lasted from a few
seconds to 10 or so minutes. They were ,usually, comparable in
strength with stuff from a few klms away.
Always in the first few hours of daylight.
Whatever the conditions were that produced the ducting, they
disappeared and I haven't been able to tap in again.
Brian WE
Things will get better....when they finish getting worse.

The 245 XLT is programmed to examine a trunk for at least 5 seconds for activity.
I don't find this delay a problem but desirable as the trunk has more of what I want to hear.

The PRO 92 which you recommend has a delay in Edacs mode of 3 or 4 seconds per ID! The BC 245 XLT doesn't have that undesirable 'feature'. But then the Pro 92 also sucks at monitoring Motorola systems so the bottom line is the best and only useful scanner for monitoring trunking and conventional is the BC 245 XLT at this time.

I can't for the life of me think of any useful feature of the Pro 92 that is done right. Every thing about that radio has a flaw that in the real world makes it useless for what it is intended for.

Save your money, go with NiMh batteries. Recharge them 500-1000
times, great in digital cameras, radios, etc. 1300-1500Ma.

Geoff,

You're in the wrong newsgroup. The "scanners" discussed here are really not very good for scanning wireless audio channels. ;-)

I have a RELM MS200 base/mobile scanner that is only about 3 months old and practically like-new condition. No mods of any kind have been done to it. This scanner does right out of the box both PL and DPL, has 200 channels, and alpha display. More specs can be found at http://www.scannerworld.com/scnp54b.htm .

I'm asking $175(w/o shipping) for scanner, mounting bracket, DC and AC power cords, manual, telescoping antenna, and the original programming diskette. This is everything I got with the scanner. I even have the box still. Please email directly if interested.(remove "HATE" and "SPAM" from email to reply)

Regards,
Tony

Jeezz Vic lighten up, I think that the 92 is a decent radio. How about the PL/DPL feature, I think that works excellent. And what about using an alkaline pack, just the other day my batteries ran dry so I pulled over picked up some new ones, try that with the 245. And then there is the alpha tags and the attenuation on a per channel basis. Sure the 92 does have flaws but that does not mean the radio is totally useless, I prefer the 92 for conventional scanning over the 245, but for trunking I prefer the 245.

Maybe you have money to burn. The PRO-92 just isn't a good value for its high price tag. Better to get a used PRO-43 to go with a BC245 and still spend less than the cost of a PRO-92 with accessories (how about that $70 computer cable!).

4484. Using standard batteries in BC245XLT?

Newsgroup: rec.radio.scanner
Date: 1999-11-25 00:00:00 UTC
From: Bryan Costin <bcostin@clark.net>
Message-ID: <Sqd%3.41833$oa2.267245@iad-read.news.verio.net>
Source record: 101428

Hi, all. Can anyone suggest a practical way to use regular AA batteries with a BC245XLT? The pack it uses is the same as the BC235 and its rebadged cousin the Pro-90. And the same design is probably shared by other scanners I don't know about.

Most of you are probably familiar with it: the pack looks like it's just a four AA-size cells soldered together and encased in some heat-shrink plastic. There's a little plug on a short wire that connects to a tiny socket in the scanner's battery compartment.

Is that really all there is to it? Would it be practical to rig together some standard AA batteries in a similar arrangement, maybe adapting one of the plastic battery holders available from Radio Shack?

I realize that something like this wouldn't actually fit inside the scanner and probably could not be recharged easily. But for emergency use or in a power outage it might be handy to have an alternative way of using off-the-shelf batteries, even if it's held together with Velcro and duct-tape. :-)

Thanks Nite!

What I was doing wrong was not setting the record funtions in my mixer. A gent named Bob H. asked me if I did that and bingo now they all work. If anyone eles is having trouble with the invert programs heres my findings.

Connect your cable from your tape out on your scanner to you inline of your sound card. The Sound card must be full duplex. Go to your mixer control and choose the options button then select record options. Once this is done select line in and mute your mic/line. To test turn your squelch to zero and run the invert program, Slide the bar and you should here the noise go high and low. If that happens you all set to experiment.

Good luck!

I just got my first scanner last week, and I am driving from Toronto to Ottawa and back this weekend. Can anyone give me a list of freq's to monitor during the trip? I am interested in anything that might cause traffic problems etc.

While I am in Ottawa, are there any 'special' freq's to monitor for the generally curious?

TIA,
Ron

> to new frequencies recently.

Assuming you are asking about Vancouver BC ...

Police - Digital and trunked, also capabile of being encrypted - doubt
if we will ever be able to listen to them again.

Fire - Same although they (so far) have left the old dispatch
frequency (151.505) active. We can still hear the dispatch side
of the communication.

Ambulance - (Lower Mainland) supposed to be converting to
the same system early next year.

Police/Fire/Ambulance scanning in Vancouver (BC) is rapidly becoming
impossible. Most of the Greater Vancouver Regional District cities
and municipalities are supposedly moving all 911 Emergency services
to this Central Dispatch system.

<< I need the frequencies for Lake Station, Hobart, and New Chicago, Lake
> County, Indiana. >>

Hobart FD - 154.370 (141.3 CTCSS)
Hobart LG - 155.745 (141.3 CTCSS) (repeats 154.980 mobile input)
For Hobart PD and Lake Station PD try:
155.130 (114.8 CTCSS) out / 154.890 input
Lake Station FD: 154.665 out / 159.400 input (114.8 CTCSS) and 154.430
Lake County Sheriff Indiana: 154.815 out / 155.970 input (192.8 CTCSS)
The only thing I find for new chicago is their water dept on 151.520, I'd guess
they are policed by the sheriff
-Also try 155.475 for ILEEN police traffic

-Happy Scanning - Ted

You might want to drop any and all RatShack[SM] batteries from
consideration. I have seen them leak will they still will test good. By
good I mean that each cell will still produce 1.5V@500mA.
Battery "gunk" is extremly corrosive and very difficult to remove.

I am a MSDOS/Window$95 user and only know a little about macs. Several weeks
ago a post here promtped me to ask the local mac guru about communication
programs. According to him there just are not many "modern" simple (ie dumb)
terminal prgrams for the mac. Kermit was the "best". You might be able to
load and run one of the dos/win emulators(yea I know YUCK!), or maybew or mac
guru is not all that current on the simpler non network based communication
options.
Good Luck.

I picked up a gizmo call the "Sound Feeder", which is a small FM/MPX
"transmitter". It is very low power and has a lot of spurs. By
connecting it to a decent ground plane antenna I could receive it about
30', by using a laboratory modular amp I could get it up to maybe 100'
with a lot of interference to both HF and VHF/UHF comms.
I use the SF in my protable kit to feed scanners/CD/whatever into to the
FM radio in rental cars.
I am not, nor have I claimed that the "Fisher-Price" rebroadcaster was
for everyone. But for $3.00(USA) it is a very cheap workable way for me
to listen to my SW/Scanner/weaksignal Ham comms while away from the
CommCenter [or AKA HamShack]. For my operations the loss of 49MHz is
acceptable. Cordless telcos and other baby monitor comms just aren't my
thing.

>
>I was thinking of buying but would like to hear from people who own one to see
>if it is worth getting
I love my PCR-1000. I use it for both HF(SWLing) and VHF/UFH scanning.
Since this is a scanning ng and since most of what scanning is about is above 30MHZ, I will only comment on that aspect of the PCR1000 use.
I have several radio that cover parts fo the 30MHz to 10=GHz range and will compare the Icom to any that cover the 30 to 1300 reception.
I have a Pro2004 and have owned both the 2005 and 2006. PCR1000 easily beats them for lack of spurrs and overload and the PCR1000 has full 30 to 1300 [less cell] so you can hunt all those "Secret comms" in the 512 to 800 [there aren't any!] or so you can listen to your fav UHF TV audio. One of the best features is the AM/FM/WFM/USB/LSB/CW modes. With
BW options that range from 3KHz[really 2.8] to 150KHz. Non Icom software allow the use of almost any BW in any mode. I use mine for APT reception and the 50KHZ BW is great. I can also hear the 406MHZ time code data
from either NOAA GOES. While I have not yet recovered the actual data, I think I can get a decoder to work. I can not even see this signal with the Pro2004. [By see I mean to use one of the audio spectrum programs to look at the audio where you can see stuff to faint to hear].
Icoms software simply sucks. But there is very good third party software that ranges from good and free to expensive but great.
As it comes it does not track trunks systems, there are some free programs that with the addtion of another radio are supposed to allow it to trunk track. I am not into public saftey so I have no experience with that option.
At $400 the PCR1000 is not cheap. Its little brother the PCR100 might be better if all you are ineterested in is VHF/UHF FM comms. IT too is great little radio.
Good luck on your quest and let us all knwo what you decide.

I have to agree with Jorge. MT and PC are poorly written and edited; and yes, the editorial content just plain sucks. Compare those two rags to Rich Wells' Web site! his single-handed output far outshines anything either of these magazines offer and it doesn't cost a cent. Unfortunately there are no alternatives. A couple of other magazines that have come and gone were worthwhile only to line the bottom of a bird cage.

(Parenthetically, Rich seems to be be pandering more and more to the dealers who have been supplying him with products as well as giving plugs to companies and reports public relations blather as "news." I'd like to see some disclosure on which of the products he buys, receives as loaners and receives as freebies, just so I know where he's coming from. That is not to say that I question his honesty--quite the contrary. That is not an issue with me at all. But hey, if you're going to editorialize like a publication, you need to apply the same standards.)

I had thought about defeating the on board microphone but my wife sometimes watches a friends baby and she wanted to be able to use it for the orignal purpose. For me the additional switch and level control where no expense. And it has already came in usefull when I wanted to monitor a FRS radio while in the (nearly) shielded basement. The 49MHz from the babymonitor reached where a distant 400MHz signal would not. I just placed the FRS next to the babmon and left the internal microphone on. HEard the call and came back out into the open. I am pulling telephone/intercom/network/background music and video cables this weekend. What fun!

Better get out of that apt.

I had a cordless phone which gave me 20 kilometres, but only
because of poor base antenna installation. The base and portable
units both put out 4.5 watts and I had a 30 watt booster for each
end. The frequencies used were 31 and 51 Mhz.

I'm halfway into this thread so forgive if this isn't what you're looking for. I'd check out www.Mouser.com or www.digikey.com for 12V supplies. You'll get better quality and probably a better price since these places are electronics suppliers for both industrial and private buyers. I suggest you take a look. Good luck.

Regards,
Tony

I think the quality of content in a magazine like MT, or PC, largely depends on contributions from people in the hobby. The people in the business only have access to limited information. Maybe if people in this newsgroup shared their diverse knowledge, and were willing to submit material to the publishers, those magazines could be greatly improved!

While not have had any experience with MDT I have been playing with digital radio sicne before packet. One common cause of hit and miss recpetion is either misadjusted level to the decoder (in this case the data slicer) or signals that aare weak enough so as to have excess noise. By this, if you are receiving strong local signals, but more distant units are in and out, then a better antenna, feedline, preamp or even a better receiver will do wonders. When experimenting with early 9600baud packet I was amazed at how much variation was caused by signal to noise that was nearly undectable by ear. Only by looking at the signals with some real test equipment was I able to see that the poor rececption was caused by worse signal to noise. Hard to measure at home.
If you copy all transimissions from the base or central dispatch, and have trouble with mobiles then I would check out impriving my received signal, if the base is hit and miss I would look to my decoder. Sometimes the PC is the source as it might have other things going on in the back ground. If runing a MSDOS decoder, make sure no TSR or unneeded drivers are loading at boot, if using Win95 press cntrl+alt+del to see a list of the tasks that are running. Shut down any that are not needed. Browsers and netplayers (like real media) put all sorts of junk and these can cause timing problems.
Good luck!

Lake Station PD is on a repeater on 153.905 (141.3 PL). Input is 159.130

I've had a DJ-X10 for close to a year and I am very pleased with it as an all round small radio. There are better pure scanners and better pure shortwave receivers. But overall, it is a fine radio.

Minuses ..
- Slow at scanning
- Draws a lot of current (nicads last 4 to 6 hrs per charge)
- Some overloading and inner mod in strong signal areas

Pluses ..
- Very small, well built, solid
- Multi-line, alphanumeric memory and display
- Good sensitivity .. picks up local AM and world band (from Ohio) fairly well with just a 20 inch whip.
- Very good set of features .. backlit disply/keyboard, 1200 memories, all mode, etc.

When I am going to be out and about and I'm not sure what I want to listen to, the DJ-X10 is usually the radio I take along. Not my Pro2006, Sony 7600G or Sony 2010 ... even tho they each work far better at what they do.

If you want to do it right the first time, go with a commercial-grade cellular antenna. Larsen (now "Radiall/Larsen") has a good selection, with various types of antennas and mountings at:
http://www.larsenantennas.com/products/mobile/cellular.html

At those frequencies, you WANT something that's designed specifically for them.

Obviously, you didn't read the portion of All Advantage's membership agreement regarding the unsolicited spamming of newsgroups.

Here, I'll help you:

(begin quote)

Members may not use Spam to Obtain Referrals. You may not use unsolicited email, usenet, or message board postings (“spam”) to gather referrals. (Usenet and message board spam are messages sent or posted which are unrelated to the topic of discussion of the particular news group or message board.) The use of spam to promote the AllAdvantage service has strict negative consequences. Not only may AllAdvantage terminate the Membership of any Member who in AllAdvantage’s reasonable opinion has used unsolicited email to gain referrals (a “Spammer”); AllAdvantage will also sever the branch of the "referral tree" made up of direct and extended referrals obtained by the Spammer. The branch accounts (those under the Spammer) will not be terminated, but no one above the Spammer on the referral tree will benefit (e.g. receive Viewbar credits) from them. In addition, You may be subject to state and federal penalties and other legal consequences under applicable law if You send unsolicited email. Our Anti-Spam Policy (http://www.alladvantage.com/antispam.asp) provides more details and is incorporated into this Agreement.

Say "buh bye" to your membership...

4536. FS: Icom R7000 Communications Receiver

Newsgroup: rec.radio.scanner
Date: 1999-11-26 00:00:00 UTC
From: jimdpeters@aol.com
Message-ID: <19991126125257.13998.00000495@ng-ca1.aol.com>
Source record: 101280

I have the following Icom R7000 communications receiver for sale. I have two of these and want to sell one of them. "See picture" I will give you the choice of either radio. They are both in EXCELLENT condition except the top radio in picture has a meter light that is not working. The top radio also has the "Speech Option".

<A HREF="http://members.aol.com/jimdpeters/icom7000.jpg">For Picture of the Icom R7000 Click Here</A>

Considered by many to be the top of the line VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB, AM, NFM & WFM allows reception of most everything you want to listen to. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recording.

IC-R7000 SPECIFICATIONS

Frequency Coverage 25. MHz to 2000 MHz. "with a gap between 1000 MHz & 1025 MHz".
Mode: Upper & Lower Sideband, AM, wide FM, narrow FM
Memory Channels: 99
Tuning Step Increment: - 0.1, 1, 5, 10, 12.5, or 25 kHz.
Power Supply Requirement (U.S.A): 117 Volt AC
Usable Temperature Range: +14ï¿½F ~ +140ï¿½F
Dimensions: 11.3(W) x 4.3(H) x 10.9(D) in
Weight: 17.6 lbs.

The R7000 has (6) seperate scanning functions:
1. Priority Scan
2. Programmed Scan
3. Selected Memory Scan
4. Selected Mode Memory Scan
5. Memory Channel Scan
6. Auto-Write Memory Scan

The receiver comes with the original box and styrafoam packing, and owners manual. The radio's have been in a non-smoking environment. I'm asking $750 for the radio. For that price I will ship it and insure it.

If you have any questions I will be very happy to answer them.

I just traded for a "Dead" Pro2004. You can never have too many radios, right?
Anyway the sucker is in great condition except for one little problem.
The bandpass switch transitors are not getting the right turn on voltage. They are all being held to 7.7V.
Looking at the 74ls145 (IC501) the B input of the A/B/C BCD inputs is not being pulled to 5.0V like A and C. D is grounded as they only have 7 switches and 3^2=9.
My question is "Has anyone ever seen a TTL BCD to Decimal decoder fail in such a way as to load a CMOS output to 1.7V on CMOS out=high?" I suspect the CMOS CPU is whacked. I can rig a two transistor level shifter to shift the 1.7V to +5.0, because the CPU output does go from 0.0 to 1.71V. The guy I got it from said it was flaky from the day he bought it new, but tandy could neve find the problem.
As for something truly weird, the darn thing just started working perfectly. Input B is now getting the correct 5.0V and the scanner is working.
This is a nasty board to work on, and I would prefer to fix this one from the top.
Any guesses out there.
I have never seen a TTL gate fail this way and strongly suspect the CPU, which is no longer made or stocked by the folks at the RatShack[SM]
Thanks for any thoughts...

That's odd. I've owned two of these the AR 1000 and AR 1000 XLT
and found both of them to be good scanners. If this the AR 1500
then I would agree with you.

Probably asked before, but....

For a Newbie, is it worth it to purchase the Radio Shack Frequency guide they sell, or can all of the information there be found in other places on line?

Any thoughts?

Tom

The CPU is still listed on the support page so it should still be
available. It is unlikely that either IC is bad. The 2004 logic boards
often have poor solder joints and you probably disturbed things enough
by probing that it started to work again. Remove the board and reheat
the solder joints.

Hi!

So coming back to the original question:-

It sounds like those of you who have mostly LTR or EDACS systems in your area don't find the '92 a problem. It's problems seem to be in the Motorola tracking department, which are the ONLY systems I have locally. As I said before:-

".....but best go and look at the scanners yourself, test them out and
find out what systems are used in YOUR area. There's no substitute for doing your own homework if you're going to be stuck with the result for several years"

For handheld Motorola tracking the 245 takes some beating.....but it's conventional features are not as good as the '92.

JohnC.

>I agree. I haven't found many problems either. The only problem
>that I have encountered are stray Talk Group Ids in LTR mode when
>the signal is VERY weak.
>
>The Pro 92 is very different from the Pro 90 and it took about 3
>days to get use to it. I've been having fun tracking several of
>the LTR Systems in the Bay Area and one EDACS System (NASA AMES),
>which the Pro 90 could not do.

Hi Tom,

It's a good book to have if you live in a rural area and the
information is not available online.

The Frequency guide that I would recommend is Scanner Master.

http://www.scannermaster.com/

They are several online resources that you should also check first.

The FCC site can be found at the following URLs:

http://haifoss.fcc.gov/beta/genmen/index.hts
http://www.fcc.gov/oet/info/database/raeddf.html

The PerCon Datafinder can be found at the following URL:

http://www.perconcorp.com/datafinder/index.html

The State Index links to various scanner pages in across the US
and Canada can be found at the following URLs:

http://www.fordyce.org/scanning/links.html
http://www.panix.com/~clay/scanning/frequencies/states/

Trunked Radio Systems can be found at the following URLs:

http://home.att.net/~wwhitby/
http://www.trunkscanner.com/states/data8.html
http://ourworld.compuserve.com/homepages/brennan/guide.htm

The TAFL site (Frequencies for Canada) can be found at the
following URLs:

http://spectrum.ic.gc.ca/tafl/tafl-e/tafledat.html
http://neon.polkaroo.net/~darkwing/tafl/

4558. TRUNKER 3.7 TROUBLES

Newsgroup: rec.radio.scanner
Date: 1999-11-26 00:00:00 UTC
From: Tom Greenwood <tag@ma.ultranet.com>
Message-ID: <383F0177.6365@ma.ultranet.com>
Source record: 101302

I am hoping somebody can offer me some assistance in getting Trunker 3.7 up and running. I have tried everything that I can think of to get this program operating but no luck so far. My data slicer appears to be operating correctly based upon using the slicer.exe program and also checking it's outputs with an oscilloscope. But I continue to receive the sig?inv display on the screen and no data. Inverting the cts data seems to have no effect. I am using a local strong signal to initially test. Any ideas would be greatly appreciated.

You can reply here or to me directly at tag@ma.ultranet.com.

4562. Re: PRO-92 [sucks!]

Newsgroup: rec.radio.scanner
Date: 1999-11-26 00:00:00 UTC
From: Victor Healey <fourphun@ANTISPAM.bellsouth.net>
Message-ID: <VWE%3.1237$vs.8746@news4.atl>
Source record: 101306
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Greg I agree the PRO 92 has nice features on paper, but look at what I wrote - is it done right?

1. PL/DPL You can not park the PRO 92 on one frequency using this feature. It is only possible when you close a bank and then scan that bank. Why? Parking on a frequency or talkgroup for that matter is one of the more important features when you are listening to something that is breaking only on that channel. A SWAT team call out or a high speed chase are two examples.
I will not even mention the concept of parking the PRO 92 on a talkgroup ID. That would be really a low blow!

2. It is nice you can use Alkaline batteries in this radio. But how long do they last? Six hours. At an average cost of $0.50 per battery that is $3.00 for a set every six hours. With the BC 245 XLT you can listen to it for 10 hours on a set of Hi C nicads which you can recharge again and again. A set of just two packs can cover most days for most people. How long does a set of nicads operate in the PRO 92?

3. 12 CRYPTIC ALPHA TAGS? Anyone can have far more then that per talkgroup ID with the BC 245 XLT while it is running hooked up to the computer with Seness FREEWARE for the 245 XLT. I can even see the talkgroup ID, its associated long description, place in the scan list the frequency being used at that instance and a description also long form of what the trunking system is. In the shortened but even neater POP UP window I can see just what I want to know on each transmission. It looks like this data wise

Popup Mode [BC245 XLT]
Fr Cobb County Trunking System
ID CC Police Zone 3 -- South Cobb
Mode Scan ID (M)
6:26 11/26/19999

Remember that is the truncated display of Senns software!
It displays in nice yellow and white Arial text in a size 12 or 14 font over a dark black/blue background which is extremely easy to read even with out glasses.

Eventually you may be able to do something similar with the PRO 92. but t cost? $350 for the radio. $3.00 for a set of batteries.
$70 for a computer cable and software. That is $420 more or less. Compare that to the BC 245 XLT which is now $199 at ham Radio Outlets all over the country. The computer cable is included along with a set of batteries. A spare set of nicads is $17 if you want it. The software is FREE for the downloading from the Internet. You could afford two sets of BC245 XLTs with

even more capabilities for the cost of one PRO 92 and you will still have
change left over.

4566. FS Bearcat 200xlt

Newsgroup: rec.radio.scanner
Date: 1999-11-26 00:00:00 UTC
From: Km <ken46@fyi.net>
Message-ID: <KkA=ODXNBhLtg4O00ABsInsFfdtv@4ax.com>
Source record: 101310

I have a Bearcat Scanner 200 XLT in perfect condition. Has a brand new
1 mth old battery in er. Has the celular mode done to it. Also come
with a Diamond RH77CA ducky antenna. It is a very good sensitive
antenna.. Scanner is in perfect condition and has the manual..

125 dollars firm plus shipping.
Thanks..
Ken

4567. Community Announcements

I just heard this on my local police channel:
"Attention all scanner listeners, this is a community announcement.
The parade will go on today rain or shine."

Just wondering, do other NG readers live in towns that use the scanner
for community announcements?, snow days, etc.

Al Madison, NJ

Why not try the TTL IC first? It is a very cheap and easy thing to
try... Being in the service business I have seen components fail in
many ways that are hard to explain...

I just traded for a "Dead" Pro2004. You can never have too many
radios,
right?
Anyway the sucker is in great condition except for one little problem.
The bandpass switch transitors are not getting the right turn on
voltage.
They are all being held to 7.7V.
Looking at the 74ls145 (IC501) the B input of the A/B/C BCD inputs is
not
being pulled to 5.0V like A and C. D is grounded as they only have 7
switches
and 3^2=9.
My question is "Has anyone ever seen a TTL BCD to Decimal decoder fail
in
such a way as to load a CMOS output to 1.7V on CMOS out=high?" I
suspect the
CMOS CPU is whacked. I can rig a two transistor level shifter to
shift the
1.7V to +5.0, because the CPU output does go from 0.0 to 1.71V. The
guy I
got it from said it was flaky from the day he bought it new, but tandy
could
neve find the problem.

As for something truly weird, the darn thing just started working
perfectly.
Input B is now getting the correct 5.0V and the scanner is working.
This is a nasty board to work on, and I would prefer to fix this one
from the
top.
Any guesses out there.
I have never seen a TTL gate fail this way and strongly suspect the
CPU,
which is no longer made or stocked by the folks at the RatShack[SM]
Thanks for any thoughts...

Short Answer is NO. The book has a little bit of good info in it, but most of it is out dated cause basicly the new one on the shelf has year old info in it. Your best bet would be to do a little searching on the web and you will be able to find everything you want plus more.

Try these sites:

http://www.trunktracker.com/index.html
http://www.strongsignals.net/htm/model.htm
http://www.911scanner.8m.com/

Good luck,

mprindle

Your town just got suckered into the new astro digital system.
unmonitorable? maybe. maybe not.

1 buy an Astro, have the recieved only freg. programmed in.
2 without trunking codes you can only listen to one freq. at a time and you may not be able to follow a conversation but you can hear something.
Any other techs have any better ideas please post em.

Astro's (2 of which I own,saber & XTS3000)
are digital radios capable of analog mode.
It is the mode the radio is in that you are really speaking of. An astro can be in conventional Analog mode and will be heard in the clear by scanners.
An astro in "ASTRO" mode is digital and will not be heard in the clear by scanners.

I think he said he wanted G O O D!!!! scanner magazines. Unfortunately, most of the magazines I have seen including the ones mentioned) are very poor. The printing, editorial content and information value of most scanner magazines just plain sucks. These things were rags by 1969 standards let alone 1999!

It's no wonder there are so few new hobbyist. I too am new to the hobby and have been very disappointed with what information and literature is available to a new user. It's as if anything dealing with scanners is from the 1980's.

I hold no brief for the Shack and felt their handling of
"Scanshack-gate" was heavy handed in the extreme. Moreover, their PRO-92 can
clearly be counted as something as a failure as a trunk tracking receiver.
HOWEVER, there is a tendency for those whose perspective is limited or whose
sense of self is so threatened that they feel obliged to personally attack
any RS product (whether or not they've tried one) as well as those who
defend anything about it. Rich was doing nothing more than setting the
record straight in this regard and the fellow you pilloried was quite
correct in lauding his efforts to do so. I second that notion. Rich is an
experienced and well regarded member of this hobby and his opinions, while
not infallible, are entitled to a better reception than cheap derision.

Having said all of that I would urge anyone looking to get a trunk
tracking receiver to keep looking beyond the PRO-92. Its deficiencies in
that area of operation are easily more than enough to outweigh its other
features. As far as comparisons with a PRO-43 for conventional scanning are
concerned, however - having done just that (nothing scientific, mind you)
for the past couple of evenings - I'd give the CLEAR nod to the PRO-92 as a
conventional scanner. Have you or Vic actually spent any time doing a side
by side comparison between these two? Sure, IMHO the PRO-92 is an expensive
handheld which trunktracks so poorly as to make it virtually unusable and
too expensive as a plain conventional scanner; but don't abuse those whose
views might not be entirely in synch with your own.

Here in Clarksville I hear troup "J" 0n the xxx .7625 group. Have not heard anything on 856.7625, but on 857.7625, 858.7625 and 859.7625 I hear all comms. 860.7625 is the data channel and never changes. However, as in most states it is not very interesting because its just a long list of lic. plate numbers that the troupers pull over.
Bear in mind that there are about 30 or 40 channels assigned statewide for the trunked radio system for state use. I have been told that eventually "everybody" will be on these channels so you may hear anything here. I have heard the "nuke plant" at Russellville having a drill here. Regards

Greetings!

I am pleased to inform everyone that the Police Call CD-ROM shipped from the replication house on Wednesday and should be arriving at various warehouses across the country as early as Monday morning. The program should start shipping to people who ordered the CD in the next week or so and should arrive on Radio Shack store shelves in the next two weeks!

If anyone has any questions or comments, please do not hesitate to send us e-mail or visit our website listed below.

Thank you everyone for your support.

Warmest Regards,

Adam Goldman

Letting "everyone" (City and County Law Enforcment) on the 800
system was a ploy that the State Police used to gain support for
the system during the funding phase. Most agencies tend to
still use their own system.

When the system goes digital, the next step, expect more locals
to go on it.

Several years ago I heard Indiana State Police put out a bulletin on the point-to-point statewide frequency (155.370) alerting PD's and any one with scanners to be aware that it had been reported that someone was giving out candy on Halloween that had pins in it. Think this was the only time I ever heard a message addressed to scanner owners.

I would visit the State Police local office, and explain that you are a
public service enthusiast, and ask them for the frequencies that they use,
and any particular format such as trunking. Then consult your
operating manual for programming details. If you need further help,
there is a good chance that the NJ State Police Radio Officer can find
a trooper who is a scanner enthusiast that can help you.
Presently, the NJ State Police are in the mode to be more public
friendly. And as I have frequently said on this NG before, my NJ town
(Madison) directs broadcasts to scanner listeners regarding snow days, etc.

Good general coverage radio, probably not as good as the AR8200 but
significantly cheaper also. Alpha tags are a real plus for this radio.

Have for sale a never used, unregistered Scan*Star Industrial Edition software with manual. This supports many different receivers/scanners and performs logging functions, spectrum analysis, scanning and searching control, public safety functions, traffic analysis and digital audio logging. It may be used in conjunction with GPS for accurate time stamps, position, velocity and time logging and to correct the PC clock. It really does a lot! I was going to use it in my PI business, but decided to buy a Spectrum Analyzer rather than another receiver. I paid $450.00. First $350 plus $5.00 shipping takes it. Dick W5AK 713-461-1976

and more info on the unit.

4622. Bug Needed

Newsgroup: rec.radio.scanner
Date: 1999-11-27 00:00:00 UTC
From: rock56@webtv.net
Message-ID: <20670-383F9439-95@storefull-245.iap.bryant.webtv.net>
Source record: 101194

Ok I hope I don't get slammed for this question but here goes. I've (we've) been thinking about making a bug for the office where we work, to get a little more info about what goes on around the plant. I've put together two FM transmitter kits that are to week to use there and was thinking about trying a baby monitor. I pick these things up from a far with my scanner. So, does anyone have any good ideas on how to make these monitors work with batteries only? Would this be a good way to go? If any of you have ever worked for a Textile Co. you'll know why I would like to do this. I've never had a baby monitor but I'll get one if it can be used for this. Thanks for any info. Rocky

In my town you would never hear such a thing. The dispatcher that said
something like that would find themselves in the supervisors office faster than
they would like.

Official business only ....

Yes I tried another good pack and the same thing, I am getting voltage
thru the switch and all the way up to the main board. but do not know
where to go from here with this problem. Thanks.

You say you are using Trunker. Are you sure the data channel is
Motorola? If it is GE/Erricson, you would get the symptoms you have.
Try another data channel, or try Etrunk.

I've gotten much more than 6 hours with alkalines.

> With the BC 245 XLT you can listen to it for 10 hours on a set of Hi
> C nicads which you can recharge again and again.

The cells in the BC245 are hardly high capacity. And I prefer to
have the option of choosing alkaline, NiCd or NiMH.

> How long does a set of nicads operate in the PRO 92?

6-7 hours using "real" high capacity NiCds. About 9-10
with even higher capacity NiMH.

> 3. 12 CRYPTIC ALPHA TAGS? Anyone can have far more then that per
> talkgroup ID with the BC 245 XLT while it is running hooked up to the
> computer with Seness FREEWARE for the 245 XLT.

I hope you enjoy walknig around with a computer clipped onto your
belt Vic! The 92 and 245 are PORTABLE radios. It's hardly fair
to cut-down the 92 for

> Eventually you may be able to do something similar with the PRO 92.
> but t cost? $350 for the radio.

And at that price, you get a much better performing receiver in
the 92. The 92 is FAR superior at rejecting imaging and intermod
interference. With the 245 you have to HOPE that the attenuator
will be enough to solve your intermod problems while sacrificing
weak signal reception (remember that the 245 has a global
attenuator while the 92's is per channel. Of course if the 245
had PL/DPL like the 92 this type of interference would be even
less of a problem but I guess that's all you get for $200.)

You mean that you are the management of the textile plant, and you want to spy on your employees. The average worker wouldn`t have the motivation to do this.... What you gonna do . bug the rest rooms ? There are people on the news group here that know something about bugging, but I doubt that they are gonna help you either engage in industrial espionage, or bug your employees ! There are sleazy outfits you can hire to do this sort of work, and i suggest that you consult with them ....

4640. CARMA Meeting Dec 4

Newsgroup: rec.radio.scanner
Date: 1999-11-27 00:00:00 UTC
From: "Rich Carlson, N9JIG" <n9jig@theramp.net>
Message-ID: <n9jig-AD4DF8.09034227111999@news.theramp.net>
Source record: 101212

The next CARMA Meeting will be on Saturday December 4, 1999 at Phillie's Pizza & Restaurant, 6300 S. Kingery Highway (IL-83) in Willowbrook IL at 1:00 PM. Please arrive between 11:30 and Noon, as you MUST purchase a meal to attend.

If bringing handouts, expect 50 to 60 attendees. If the weather is not as nice as it has been recently around here, expect a few more. (We could have had our picnic in November!!!)

To get to Phillie's, see the CARMA web site at http://www.theramp.net/shabec/carma.htm or the following:

From I-55 take IL-83 north to 63rd. Street, turn left on 63rd, then the first left into the shopping center with the Dominick's. After entering the lot head to the right (west) and see Phillie's at the west end of the strip.

From I-294 and the North, get off at Ogden Av (US-34) West, and then take IL-83 South. Turn right (west) at 63rd and the next left into the mall.

Bring any radio equipment you wish to sell, trade, or demonstrate. I will be showing the new BC245 running TrunkTrac.

Bring your pocket scanners, we will have our wireless mic in use.

Bring your appetite! The food is great!

First thing you want to do is to consider the law. YOU CAN BE SUED! There are 1-party states, and there are 2-party states (remember Linda Tripp). 1-party states mean that only one party in a conversation needs to know that a conversion is being monitored/recorded for the evidence to be admissable in court. 2-party states mean that all parties should know that a conversation is being monitored/recorded for evidence to be admissable in court.

The law applies where the bugging is taking place. I can record my phone calls from DC, a 1-party state (District) to any location, even a 2-party state since the recording is occurring in a 1-party state, and I am the 1 party that has knowledge of the conversation.

The bottom line is that you sound like you want to eavesdrop on conversations that you may not be a party to at all. This is a full blown "Title 3" intercept (even though the actual intercept laws are actually spelled out in Title 24). Doing this without a warrant can land you in the big house and/or the little wallet.

Dewey

4646. FA: ### MOTOROLA SABER I SECURE - VHF

Newsgroup: rec.radio.scanner
Date: 1999-11-27 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19991127120136.26917.00001272@ng-ch1.aol.com>
Source record: 101218

For Sale: Motorola Saber I Secure - VHF w/Accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207518634

Model #- H99QX052A
Factory ID - H43YXN7139CN

12 channels
6 watt output
146-174Mhz
SECURENET-S capable
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
VERY Good High-Capacity Battery (W&W Brand I believe)
Antenna
Remote Speaker/Mic - Model NTN6128C
Belt Clip
D-Ring Clip w/Belt Swivel Attachment

This unit is in excellent shape (but has some small surface scratches on front). It is guaranteed to be in 100% working condition. All included accessories (except battery) are genuine Motorola parts and all are in perfect condition. Selling because it is not needed anymore. Reserve price is VERY reasonable. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207518634

4647. FA: ### MOTOROLA SABER SPEAKER/MIC - NMN6128C

Newsgroup: rec.radio.scanner
Date: 1999-11-27 00:00:00 UTC
From: pdfdisp@aol.com

For Sale: Motorola Saber Rapid Charger & Conditioner

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207502533

MODEL: NTN4734A

This unit is in excellent shape and is guaranteed to be 100% working on arrival! Reserve is VERY reasonable. Selling because it is not needed anymore. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207502533

4649. FA: ### MOTOROLA SABER 6-BAY RACK CHARGER

Newsgroup: rec.radio.scanner
Date: 1999-11-27 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19991127120229.26917.00001277@ng-ch1.aol.com>
Source record: 101221

For Sale: Motorola Saber 6-Bay Rack Charger

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207500190

MODEL: NTN4796A

This unit is in excellent shape and works great. Slot number 5 seems to not work, but someone with minimal technical knowledge could probably easily fix it. Everything else works great, and it's guaranteed to be working on arrival! This charger goes for about $700 from Motorola... Reserve on this one is VERY reasonable. Selling because it is not needed anymore. Please email with any questions. Good luck, and thanks for looking!

You must have a 10 minute attention span. Remember how heavy handed
Radio Shack was with the Scanshack incident? They want you to buy their
junk and then try to control your hobby for you. The PRO-92 is a poor
trunk tracker mated with a good receiver. If you want a fine
conventional handheld, get a PRO-43 and save a few dollars.

WRONG!!! I guessed I would get replies like this. I am just a worker. 20 year one. You have to stay one step ahead to last that long. I've seen allot of back stabbing supervisors come and go. I'm over a crew (not a supervisor) that gets shit on for no reason at all, and I'm going to do something about it. I couldn't care less about the laws involved. I look out for myself and the crew I work with and nobody's going to say anything about a bug when their in the wrong to start with. I would hope that it would be found after a couple weeks, just to see them worry.

4654. Re: Yaesu VR-500?

Source record: 101226

Auggie,

I bought one and I am rather pleased with it. Sensitivity is up there with my AR8000, along with a DJX-10, and I notice no oscillation such as you have seen. However, audio howl is often caused by a high-impedance battery. Try fresh NiMH and see if that doesn't
make that better. As to sensitivity, over most of its range the detectable signal is well under 1 uV, and (unusual for consumer equipment) the gain across the range holds within about 3 dB with full scale, attenuator enabled, at about 43 dBuV between about 500 KHz and 1.3 GHz. Sensitivity drops below AMBC and above 1 GHz, but is still usable for a lot of stuff out to the ends of its range.

(I am not so pleasediwith the Windows programming software I bought, and am waiting for an answer why it says anything I try is an unsupported operation. That is another thread.)

Bob,

I have an R2 and it is a fantastic little package. However, I noticed right away that it has very poor rejection of nearby stations in wide FM mode. In the store in Oakland, I was hearing a nearby FM BC station no matter where I tuned in the FM broadcast band. So you may not wish to put an efficient antennna on it!

If you don't have a problem with strong nearby stations, you could use a 28 inch whip or so, or even a random length wire maneuvered around until reception is good. If you want to be more precise (g) a 220 MHz 5/8 wave will work fine as a 1/4 wave in this range, if you trim a couple of inches from the whip. (The "loaded" first resonance for a 5/8 wave series-coil antenna is about 1/3 of its rated frequency.)

Happy hunting,

Cortland

I have been using alkalines in my Yupiteru MVT-9000, but would
like to switch to re-chargeables.
1. Is there a best brand of ni-cads?
2. Has anyone tried re-chargeable alkalines with good success?
3. What about ni-mh?

If I use something other than ni-cad, will the internal charger in
the Yupi handle it ok, or do I need to buy a stand-alone
recharger? Recommendations on re-chargers?

Thanks.

"The fact is that the average man's love of liberty is nine-tenths
imaginary, exactly like his love of sense, justice, and truth. He
is
not actually happy when free; he is uncomfortable, a bit alarmed,
and
intolerably lonely. Liberty is not a thing for the great masses
of
men. It is the exclusive possession of a small and disreputable
minority, like knowledge, courage and honor. It takes a special
sort of
man to understand and enjoy liberty--and he is usually an outlaw
in
democratic societies." H. L. Mencken, 1923

Jake,

Letters to the FCC had no chance of success in this case; Congress was PO'd at folks leaking their calls, TOLD the FCC what to do, and the FCC had no choice but to obey

Now I'll take my turn at flaming:

Flame is ON:

We hobbyists proved we couldn't be trusted to keep private matters private. Do you think a sane Congressman would trust us after that?

Flame is OFF.

Cheers,

Cortland

Biggest drawback I've found is that it is a current hog. Partly due to this, the stock battery needs about five cycles of charge and discharge before it will give more than about one hour of operating -- and this is bad, as the supplied charger takes 15 hours or more. Get a fast charger. I got an AA holder so I can use common alkalines and NiMH cells, and ordered a 2700 maH battery which remedies THAT problem. Oh yes, for HF SSB mine is about 250 Hz off frequency, which is annoying. Alinco told me there's no frequency adjustment, which sounds wrong, but I'll look at a service manual and see about that. For now, I'm just programing memories 250 Hz up.

Good luck!

Nice to see that there are other users that also like the Pro-92. The Pro-92 blows away other scanners when it comes to features/price and performance on a handheld. My Pro-92 will not be going back to Radio Shack for the following reasons:

The twelve-digit alpha-tags for every channel, bank, talkgroup and search range is an outstanding feature for a handheld scanner and can be very descriptive, especially for trunking systems when two lines are visible.

The CTCSS features are excellent for any radio. With one button press, a previously unknown PL can be programmed to the current channel when the Pro-92 decodes it during a transmission.

PL is monitored during the entired received transmission, not just at the beginning. If the PL is dropped at any time during the transmission, the scanner continues scanning. This is incredibly useful because when the town next door uses digital encryption, they drop the PL tone. My Pro-92 ignores the rest of the transmission while my less intelligent PL decoding scanner stays locked on to the digital hash.

The Weather priority that detects the 1050 Hz tone is a feature I have been looking for in a handheld scanner for a very long time.

The search function is the best I have ever used. I can define up to 10 non-continuous custom or pre-programmed search ranges at once. When storing frequencies from search mode, the PL is saved if any was present during the transmission along with the alpha tag assigned to the search range.

Radio Shack 700 mAh Ni-Cads last 8.5 hours in my Pro-92.

Simultaneous conventional and trunking scanning with no compromises made to conventional scanning features is essential. In Eastern Massachusetts most important radio networks and local authorities are on conventional repeater systems with some exceptions. State Police and other agencies use a Motorola 800 MHz hybrid trunked system. Since I primarily scan conventional systems while keeping a ear out for a few of the State Police talkgroups, it is important that trunking delays do not cause me to miss calls on conventional radio systems.

This radio has so many new and useful features that it is a good choice for scanner listeners in an area that has mostly conventional systems with some trunking activity. It is also an excellent choice for users that want the best conventional features in a handheld scanner.

Source record: 101241

ka5s@saber.net writes:
>The FCC now requires an image suppression of 38 dB, not 80.

That might still be the reason for the holes.

Older Yaesu HTs with 800 MHz coverage typically have awful image rejection in the 800 MHz band. The FT-50 was measured once as having negative image rejection (the image sensitivity was better than the sensitivity to the desired/indicated frequency!) That's why tuning to the image frequency works so well with these radios. (It's not just Yaesu that has this "feature" either).

To build a radio with 38 dB image suppression at those frequencies might require a complete redesign - using triple conversion, tunable filters, etc. So Yaesu's choice may have been to either not sell the VR-500 at all in the US, or cut out the image frequencies as well as the direct cellular frequencies. Or building a different radio entirely, using a more expensive design - but then it might not be competitive in other countries that don't have "cellular blocking" laws.

An excellent scanner (the 9000), arguably the best handheld but if you want to listen to the new European 8.33kHz airband step, you're best to go for the AOR AR8200. The 9000 is slightly bigger than the 8200; and has a wonderful signal strength meter. You can buy the 9000 from Waters & Stanton for about ï¿½269.99 (new) - their freephone number is 0500 737388 - but what scanner you want is up to you because they are both excellent models. ooohhh yeah, Cindy Crawford.... eh hem... If you are interested in listening to the high level overflights then you are better off with the AR8200 but if you are into police and telephone calls then it is the 9000.

good luck, J Newsam (Scotland)

ps the manual to the 9000 is shit....

It all depends on which COM port you use. I have both a 895 on COM 1 and a 245 COM 2 and use them both at the same time. WinScan is designed to run both or two of the same scanners at one time and does a very good job of it. I think the demo comes up default on COM 1. If you are using the 895 on another COM port click on the appropriate one on the "Options" screen and click on "Connect". Hope my rambling helps...

It is possible to boost any transmit signal, however; it might not
be legal. You may wish to spend time considering making the receive
antenna have more gain. A 3 dB gain increase would be the same as
changing the transmit power of 1 W to 2W.

Source record: 101047

I've downloaded the AirNav Software to try out before I purchase it and when I attempt to download the aircraft data, I keep receiving an error message saying that AirNav is unable to retrieve the data due to a "proxy/firewall" that is preventing the data from being retrieved.

Has anyone else experienced this problem? I'm using Windows 95 and Southwestern Bell Internet and Netscape. I know there are set ups inside Windows 95 for using a proxy server but it is asking several questions that I cannot locate on the AirNav site regarding remote HTTP access, etc.

A buddy of mine also downloaded the software and he too is receiving the same message while using a different Internet service provider.

Thanks for any assistance.

Does anyone have a list of frequencies that Southwest Airlines uses between the Aircraft and their Hubs (ie: "Private Channels").

Thanks in advance.

4700. Re: how to tap the discriminator output

Newsgroup: rec.radio.scanner

Message-ID: <3841BB59.A35369DB@globe-net.net>
Source record: 101049

While I haven't had the opportunity to open an RCA receiver (yet)... I haven't found a scanner that I couldn't find the discriminator tap point.
Primarily, I use Bill's cheat sheet located at this link:

http://www.comtronics.net/scandata.txt

Jump to table 2 and try to find one of those chips in your scanner. If you can't find one of these, look for a close number, then go to the manufacturer's website of the chip and find a schematic to verify you are tapping the correct chip/pin. Sometimes takes a little investigative
work but that's half the fun. ;-)

If you get stuck and can't find it, contact me directly and I'll try to help you out further.

There is a program called Trunker (freeware) that will analyze a trunked system
using a data slicer and a discriminator tap on the scanner. To actually here the
audio you will need a second computer controlled scanner. I have an explanation
of what I did on my web page.

http://home.att.net/~hitchner/trunker.htm

I used the data slicer built into the Optolinx but you can build your own.

> I can't say that mine acts the same. I've tried this test over and
> over, and I can't duplicate your results.

To duplicate the results, try the following test:
1. Tune to an FM broadcast station
2. turn the squelch so that the radio is just opened by the signal
3. enter the freq into memmory
4. scan.

You will notice that for the radio to open on the broadcast freq. in memmory while scanning the squelch will have to be much lower. This would seem to indicate that when tuning frequencies that are just barley enough to open the squelch, the radio will skip these frequencies while scaning memmory channels. This has been duplicated by many on the onelist group.

> of Alkalines

Typically I use headphones, the small super efficient earbud types....and I have sensitive hearing. ALthough I havent taken an ammeter to it, it would seem like the radio exceedes its stated drain specs and may not exceede the spece while monitoring a dead freq, but still uses far more power than it should to keep the audio amp transmitting that infernal hiss continuously.

Mine is almost a year old as well. Although no "communication error" is ever indicated by either the radio or the software, when going through the memmory channels by hadn the errors become apparent. I am using the factory interface and the factory software. The fact that the factory interface and the factory software cannot successfully transfer data to the radio indicates to me that AOR is a second rate company that does not consider quality and realibility to be essential to their equipment.

>
>
> While the Yupi MVT-9000 that I owned had a better receiver section, my
> 8200 goes almost everywhere I go.

The 8200 is not bad at tuning strong urban signals and in a noisy city environment like New York City, USA the hiss is tolerable as it usually cannot be heard over the noise level while walking the streets during rush hour.
That being said for 500$+ US you get a radio built to second rate quality standards that is somewhat large to be taken around daily (although I do) when comapred to my last scanner, an Icom Ic-R1.
Having SSB recieve on the 8200 is nice but I have yet to find an SSB signal strong enough to open it (aside from my friends at field day). The only use for the SSB recieve for me todate is to decode speech inversion without paying for that card. Save your money and get a radio without SSB recieve that is a bit smaller.
Perhaps that new radio shack handheld radio for several hundred dollars less that has the same number of memmory channels (or about the same) and trunking.

More channels or frequencies. Is it the BC60XLT1 or just the BC60xlt?
The BC60XLT1 has 30 channels the other has ten. The only mod I know of
is to give the 60XLT1 more channels. Try here for more answers

http://www.mods.dk/

Paulus
Thanks for the tip on how to find alkaline batteries for less than $0.50
per.
Your cost is $0.25 per AA battery! The trouble here in the SE is that I
don't think we have any Walgreen drug stores anymore.
BTW are you sure a set of six in the PRO 92 lasted for 34 hours of continuos
use?

The point is not what Yaesu's choices were...Of course it has to make decisions about the most cost-effective way to build and market its receiver. My problem with this whole thing is that Yaesu states very clearly in all of its literature that this is a "continuous coverage receiver (cellular frequencies blocked." They are not being truthful, since they utterly fail to mention that a number of other frequencies are also blocked, and they leave it to their customers to discover that fact after the receiver is purchased. If Yaesu needs to sell a receiver full of coverage holes, that is their prerogative...but they had better tell customers what they are getting BEFORE they buy. Otherwise they are engaging in false advertising and playing their own customers for fools.

BINGO Dave!

Nice feature but it isn't done right for real world use since you can not
park a PRO 92 on just one frequency and have a closed squelch until a tone
is detected like all other PL capable radios.

In article <81opo5pos1@sunsite.icm.edu.pl>, Tomek <komor@qdnet.pl> wrote:
>How to make discriminator NFM output. Which IC, which pin?

For NFM only, the discriminator output is on Pin 9 of the TA31136 chip
(The IF Mixer). It passes through a 56k resistor (little black chip type
marked 563) and goes on to pin 8 of the 4066 chip. Check you can see
the pcb-track doing this.

All of this is on the middle PCB -- when you lift the top off it holds
the top PCB, the bottom/middle PCB remains in the case. I've tried both
pin 8 and pin 9 as listed above, and the only difference is a slight drop
in signal level after the 56k resistor. Also, connecting an external
lead to the soundcard makes the scanner go a little quieter if
you use pin 8 (loading effects!).

You will need a ground point too, I can't recall exactly where I used, but
there are thick tracks of "ground" which run round the board, check with
a multimeter/continuity tester against the -ve end of the battery compartment.
One clue is to look at the headphone socket -- one leg of that is ground.
Follow the trace that leads from that, that seems to go everywhere.

Opening the 7100 will destroy all of your banks and channels info, so
write them all down :)

It is recommended that you run a screened lead from the discriminator output
and also put a tantalum capacitor in series. I found that doing that "rounded"
off the square wave based data tx's, and so I decided to leave it out.

You can just about fit a 2.5mm jack socket into the case, the point
I used was on the side where RESET/Lock/Lamp switches are, just next
to the bottom screw-mount holes, immediately above the batt. compartment.

Just make sure that nothing fouls when you put it back together, there's
not much space in there!

Hey Fred,
Do you think if you ask the same question four times, you'll get better
answers each time? Go help yourself to the answer. It right under your nose!

> is on.

I'll agree that the hiss is there, but's only noticeable when not using an earphone, and not strong enough to keep my external speaker in my car from powering itself dont' when no signal is present. Of two desktop units within arm's reach, my Optocom has no hiss, while my Pro-2035 does. All of my Uniden and GRE handhelds have it. I have noticed that when using less efficient headphones or earphones the hiss can be minimized, as the volume level needs to be higher to develop the same audio level.

> memmory and scan that bank sometimes the radio just skips over the powerful
> broadcast channel.

I can't say that mine acts the same. I've tried this test over and over, and I can't duplicate your results. I'm comparing it to a Optocom w/ Scan*Star Deluxe, using local public service freqs and one FM broadcast station. The Optocom stops on some weaker stations, but the Optocom has a better receiver, so it should. No strong stations were skipped by either radio.

> 3. The radio eats batteries like there is no tommorw...see #1. I am using
> expensive Ni-MH rechargeable batteries with 1300 Mah and still battery life
> is too short.

What volume level are you using it at? I use mine at about the 1/3 setting on my desk and with a powered speaker in my vehicles, and I get 8-10 hours on a typical set of 800 mAH NiCds, and 24 hrs + on a good set of Alkalines

> 4. Communications with the computer when programming memmories is
> unreliable, even with the newest firmware version....sometimes alphanumeric
> tags get messed up during the programming proccess sometimes even the
> frequencies themselves get messed up.

Once again, my results do not duplicate yours. What interface and software are you using? I use ARC8200 and an Optoelectronics Optolinx. I have NEVER had a communications error between my radio and

my Compaq laptop, and I change the radio's memory exclusively via software, almost daily. My unit's almost a year old now.

While the Yupi MVT-9000 that I owned had a better receiver section, my 8200 goes almost everywhere I go. I've owned 25+ scanners in the past 12 years or so, and this is still my favorite. The MVT-9000 blew it away on shortwave, and just about any weak signals, but for the day to day local stuff the 8200 works great for me.

Barry

no actually I had just realzed that I had my signature file turned
off. I had a little problem gettin it to work properly but i finnaly
got it all straight. Thank you so much for your time and valuable

================================================================================
900 MHZ BAND FREQUENCIES

Many of today's 900 MHz cordless telephones offer digital encryption
or spread spectrum technology. Either of these systems will render
the reception of the conversation by an ordinary scanner impossible.

Taken From Panasonic KX-T9000 60 Channel Model
```

4729. Scanner Database Program

Newsgroup: rec.radio.scanner
Date: 1999-11-28 00:00:00 UTC
From: guido@mail.icongrp.com
Message-ID: <38414bf4.2292032@news.comnetcom.net>
Source record: 101109

Looking for a way to keep track of all of those frequencies you have discovered?

SCANNER is the answer. The program features:
* Import and Export ASCII files
* Printed reports by Service, Departmen, or Frequency
* Ability to sort by any field (or fields)
* Ability to select by any field (or fields)

Take a look at the scanner homepage located at:

http://www.comnetcom.net/~guido//scanner/scanner.htm

and check out the screen shots.

Only $20.00 brings this fantastic program to your doorstep. Send check for disk or send check with e-mail address and I can send the program to you as an attachment.

Okay, A more detailed answer is needed. In manual mode, (not
scanning(- the PL tone is displayed and all conversations are heard,

In scan mode, with cloded mode (-) set, you heard only transmissions
with the properly stored PL tone.

In scan mode with open mode (+) set you hear all transmissions.

If you want to hear onlt transmissions for one PL tone and just one
channel, you can put that in an empty bank and scan that bank or you
can lock out other channels (easily done) in the bank.

I have used both methods in my Pro92.

I understand now better. Thank you for the lesson. Still, that's somewhat
of a major flaw, IMO, especially if you've got the scanner practically
filled up. Usually I know where I have open channels in what banks left,
but to have to do this just to monitor with PL is pending PITA. Guess I
might keep this Relm MS200 afterall. <g> Thanks again Neil.

Regards,
Tony

Please note that the new home of the FAF is //www.strongsignals.net
The maintainer of the BARC site at oak.oakland seems to have disappeared,
so the FAF and Allocation files have not been updated there (and Rich is
a much more hospitable host).

Hi,
I bought this radio with out the owners manual, Could some tell me how to program channels (frequencies) into the memories ! (WHAT BUTTONS TO PUSH).

I think it has about 12 memory channels for stored frequencies.
Any help would be very much appreciated.

Philip:

I don't have a VR-500, but if it's like other Yaesu's, you tag the channels with a "SKIP" function, then scan using the scan option that skips those tagged channels. Take another look in the manual, it should be there. I can't recall the exact details.

Conventional memory scan scans all the memory channels in
the selected banks.

Preferential Memory Scan scans only those channels with
the Preferential bit on. See the VR-500 operating manual, page 21.

It's easier than it sounds.

Most scanners have a skip or lockout bit for each memory channel.
The VR-500 uses a Preferential bit, which has essentially
the opposite meaning.

This setup is akin to the Select scan in the the larger ICOM
table radios.

That's one of the quirks of this set. You can mark a channel for preference scan, but you can't lock it out. Mark all the channels you want to hear routinely, and use the preference scan for them. Use the normal scan for checking on everything. You can change the scanner's "personality" by using Scan Mode Set to switch between HF and VHF uses, too. Different, but functional.

IMO, this is ripe for a HW mod to invert the preference function.

Cortland

> : }

I do not agree with this statement at all, a comprehensive scanner needs
a comprehensive booklet. The alternative from Richard Wells site in pdf format
does add to it.

9000M3 owner for 12 months, 7100 for 5 years.

Minor problems are:-

If you set up on a frequency and leave the priority scan running then the
set frequency creeps up the scale over time. 152.0000-152.0125-152.0250
etc. The 7100 did this as well.

After 10 months the solder joint broke where the centre pin of the antenna meets
the pin from the cct board at 90 degrees. Resoldering was easy and opening the
case DOES NOT reset the 1000 memories.

The 9000 aerial as supplied is totally useless, a 7100 telescopic aerial is the
best to use with this scanner, using the telescopic alternative the 9000 is 20%
better in reception over the 7100 model on all bands.

The leather case as supplied by http://bander.com has a sewn fold that sits
just
under the front edge and makes standing it on a flat surface most annoying, it
always leans over backwards ever so slightly.

This might be true, I'm still figuring out to do this by reading
the manual.
...

>
> 2. It is nice you can use Alkaline batteries in this radio. But how long
>do they last? Six hours. At an average cost of $0.50 per battery that is
>$3.00 for a set every six hours. With the BC 245 XLT you can listen to it
>for 10 hours on a set of Hi C nicads which you can recharge again and again.

When I just got my Pro-92, I plop in a set of Alkalines (the Walgreen
brand one, $2 for 8-pack when they're on sale;) and that first set
of alkaline lasted two days, about 34 hours total. Not bad.
I picked up a package of 8 nicads and a fast charger for $17.99
at our Sam's club since then and use the Alkaline battery pack
only when the nicads ran out of juice and no place to charge nearby (really
a neat feature.)

>A set of just two packs can cover most days for most people. How long does a
>set of nicads operate in the PRO 92?

One day, from sunrise till sleeptime (when I plug the charger back in
to recharge while scanning).

IMHO, TTFN, YMMV, 73

4773. Common Handheld Scanner problems

Newsgroup: rec.radio.scanner
Date: 1999-11-28 00:00:00 UTC
From: orasberries@my-dejanews.com
Message-ID: <38408075.110988978@netnews.worldnet.att.net>
Source record: 101179
Cross-posted to: alt.radio.scanner,rec.radio.scanner

This is a list of common problems that I have encountered on my
various handheld scanners (PRO-34, PRO-43, etc) and the usual fixes
required.

Keypad buttons don't work:
In most cases this requires a new keypad ($6 US typ.) and requires
removing most of the scanners board assemblies to get to. Estimated
time to replace by someone that has done this, 15-20 minutes.
Note: you could try and take the unit apart and clean the contacts but
you won't know if it works without re-assembling the unit. I would
change the keypad with a new one for the cost.

Keypad lock stayes on or off:
Requires taking the scanner apart as in the keypad replacement above.
Remove the metal slider contacts and clean them off and re-grease
contacts with non-conductive electronics grease.

Scanner antenna BNC connector worn (antenna wobbles):
Replace with a harder metal BNC from AMP or Amphenol as the Radio
Shack (tm) is made of softer metal. Requires removing rear cover.
Estimated time to replace 10 minutes.

Earphone makes popping noises:
First try resoldering the connections. This will work a few times but
metal may eventually break and require a new connector. estimated time
to fix or replace, 10-15 minutes.

Battery does not seem to charge or power input does not work without
wiggling the connector:
Both connectors are the same type, usually the solder joints come
loose from overuse. The simple test for this is to plug in the unit to
the ac adapter and press the light sw and wiggle the connector to see
if the light goes bright and dim.
First try resoldering the connections. This will work a few times but
metal may eventually break and require a new connector. estimated time
to fix or replace, 15-20 minutes.

I would suggest that if you are qoing to buy any of these parts, order
these parts (1 keypad, 1 power connector and 1 earphone jack) together
to save on the shipping cost down the road.

Also if doing any of these fixes, it is good idea to check for any of
the other problems as you go along.

I recommend a Uniden SC200 and a 245 for the trunked stuff.

Stay clear of the Pro 92 for trunking and save yourself a world of grief!

The 92 is not worth the price for conventional purposes. Save $150 and grab a SC200 that no one seems to even know about.

10 character alpha, PL/DPL, Backlight that you CAN SEE!!! And it comes on when a signal is detected!! Very nice scanner for the $200 dollar price tag.

In my experience, it means that the PRO-92 is always in Open (no decoding) mode when parked on a frequency in manual mode. It will display any PL/DPL/talkgroup codes detected, but does not squelch them out if they don't match your programmed tone data or talkgroup scanlist. Closed mode only works with Scan mode.

SAVE YOUR MONEY AND GET SOMEThing else!
I have one and it has all of the following problems which are standard on these radios (I asked AOR UK about this) Really the only redeeming quality of this radio over other similar handhelds it the reaction feature, however its competitors are typically several hundred US dollars cheaper.
1. The audio amp never turns off.....there is a continuous hiss whenever it is on. this also eats the batteries. This is unacceptable and not present on any of my other scanners or amateur radios.
2. When scanning because the scan speed of the radio is too fast for the PLL lock speed, the radio can skip active frequencies and you will miss transmissions. For example even if you put a strong broadcast frequency in memmory and scan that bank sometimes the radio just skips over the powerful broadcast channel.
3. The radio eats batteries like there is no tommorw...see #1. I am using expensive Ni-MH rechargeable batteries with 1300 Mah and still battery life is too short.
4. Communications with the computer when programming memmories is unreliable, even with the newest firmware version....sometimes alphanumeric tags get messed up during the programming proccess sometimes even the frequencies themselves get messed up.

Good luck to you and find something else.

What sort of scanner are you using to receive the data channel. I had a similar problem using an BC-300xlt and it would show up as sig?inv as well. But I discovered that by switching the reciever to AM mode, it worked fine. Strange I know but true. Only happened with this scanner mind you. Other scanners I have modified to have discriminator taps are OK , even on the same data slicer.
Something to consider anyway.

Well, that's why I mentioned the supplied 700 maH battery needed to be conditioned, and why I got a 2700 maH pack and a holder for 1500 maH NiMH cells. Even a short battery life would be tolerable if recharge time was short, too, but you can IMAGINE my thoughts when I got one hour out of a battery that took (supposedly) 15 hours to charge. So do plan on buying at least the AA holder, and a charger for AA NiMH (Maha ones are good, or R$) and perhaps a ($$) heavy duty NiMH pack like the W&W Mfg. Co HC530A1M-EBP34N(S)M along with a decent fast charger. I have two different Maha chargers now and as they are quite flexible what they can charge, the expense can be spread among other things as well.

Cheers,

Cortland

The City of Santa Clara is very busy during the day. You have to be
fairly close to hear this system. I've had trouble hearing this system
in West San Jose and Campbell. The Frequencies and Talk Groups on this
page are pretty current for the City of Santa Clara:

http://home.att.net/~wwhitby/ca.htm

However, the Frequencies of Alameda County appear to be out of date.

The Alameda County listing is missing the following frequencies:

867.7750
868.2000
868.2250
868.3625
868.3750
868.7125

Please note that this page also lists 866.6250, but this doesn't
appear to be in use.

> US I want to try this.
>
> Couple of things though:
>
> 1. What is the frequency/range? Does it depend on the fast-food chain?

The most common frequency pairs to check are:

30.8400 --- 154.5700
31.0000 --- 170.3050
33.1600 --- 154.5100
33.4000 --- 154.5400
35.0200 --- 154.6000 *
154.5700 --- 170.2450 *
154.6000 --- 171.1050 *
457.5375 --- 468.3875
457.5500 --- 467.7750
457.6000 --- 467.8250
461.0375 --- 466.0375
460.8875 --- 465.8875
461.0875 --- 466.0875
469.0125 --- 464.0125 *

If they're using "3M" or "GM" headsets then you need to search
from 920-922 Mhz Wide FM for the speaker frequency and from
903-905 Mhz Wide FM for the headset frequency.

A complete list of frequencies can be found at:

http://pages.prodigy.net/hounddog/fastfood.txt

> 2. Is there a list that I can find for Indiana?

They're the same across most of US

> 3. What is the broadcast range?

Depends on the system. Some can be heard up to a couple of
blocks away, while others barely get out of the parking lot.

I hear Yaseu really helped on this receiver. They could'nt meet the stringent FCC requirements of db down for cell images in certain frequency bands so they just blocked the bands out completely! Yet they still do FALSE ADVERTISING saying this unit covers all the 800 band except the cell frequencies. If you don't believe it try tuning around 807-812 Mhz. I understand they blocked this area out in order to comply with the FCC requirements instead of fixing their under engineered wonder! Hope you like it though, its bad enough the cell freqs are blocked I won't buy one that's even further crippled! Seems someone should call them on False Advertising! Just my 2 cents worth.

Are there any examples of wideband scanners that *do* meet the new FCC image rejection rules, so they only need to block the AMPS phone frequencies themselves and not the images? It seems unfair to criticize Yaesu if no one else meets the standards.

The Bearcat model designations can be confusing.

The BC-100XL is quite different from the BC-100XLT.

The PRO-35 is resembles, but is not the same as, the
Uniden BC100XLT.

Best for what?
I have a Pro16, Pro34, 2*Pro2004 and 2*PCR1000. And I gues my Kenwood
R2000, with a newly flund VHF module could be considered a "scanner".
The Pro34 is a small, 300ch handheld scanner great for using while on
foot.
The Pro16 is great fo keeping in my desk at work, if it gets stolen I am
not out that much, and I can keep up with all the local police action.
(except of course the camus police who use 800MHz trunking.
The 2004 is great for "Normal" scanning. 400 channels each, but they do
not allow recption in some bands. BNut nothing but UHF TV there anyway.
The PCR1000 are computer controlled and the "Best" of the lot. If you
have a PC to control them. They are kind of useless in the car. I sure
do not want to be trying to type and drive.
So again "best towards what purpose!!??"

Chrck out CEI or Grove.
Also Lentini.com in CT..........

They all have info/pictures of the SC200.
The 200 is what you always wanted the Relm HS200 to have but didnt.

Glenn,
I assure you I did NOT answer with the phrase "Why Bother?"....and,
since I never typed it or anything like it, I have no clue as to how it
could possibly have appeared under my name. Anyone with any ideas? I
have never heard of this before!

> presumably in use at STL-Lambert.

I have two primary frequencies as: 129.2500 and 131.7000,

here in SoCal 131.8000 is used by TWA at LAX.

Hi Greg!

Warren, Michigan does the same thing... the control channel changes every night. I was used to the Uniden Trunker way of doing things, where you program all the frequencies in, and it detects the control channel automatically, as it changes.

With the PRO-92, you program all the frequencies in, and when you start the scan, it will lock on the control channel, just press L/Out, and you're in business! Every time you turn the PRO-92 off, and back on, it will restart this process, un-locking any channels you previously locked out, and stopping on the new data channel, and you simply hit L/Out again.

I was initially confused about all this, as it's a departure from the Uniden method. Once you get used to it, you might like it better... I do! Bob Parnass helped me with this one!

The only thing missing from this post is exactly how many mAH each
battery produced. If you actually check this, you'll discover that
there is very little difference between these batteries.

More than anything else, USE FRESH BATTERIES. I always make sure
there is some kind of date code on my battery and that all my
batteries I use in a radio have the same date code. That way you'll
get the maximum life out of them.

The rest is marketing.

There will always be those who abuse tools. Murders have been
committed with Axes. Does that mean we should outlaw all axes?

The scanner is no different. We need good public relations for
scanner users. People know what axes are good for. People don't know
what scanners are good for.

Do you really think your local cops will act the same if they know
there is no chance that someone could be listening to their
conversations on the air?

Wow, it was in the Darwin awards!! That means it MUST be true!!

Like the guy who shot himself in the testicle with a 22LR cartridge
when he used it for a fuse in his truck! Right!! Some asshole who
didn't know anything about firearms thought that one up!!

OK, I will admit, I don't KNOW how energetic a 22LR would be
in the environment of a fuse box. But I DO know that a 22LR
cartridge that 'popped' in a totally open environment didn't even
rip the pile of clothes it was in. Although it might make an
interesting experiment.... Let's see, how to do it safely.....

(In case you're interested, if it DID ignite, it would just pop. I've
run 22s through the dryer! You need to confine the charge.
In fact, if you shoot a 22 with a 2" barrel, a 22 Short will generate
more velocity than most 22LRs! Why? Because the barrel
needs to contain the charge!)

Okay, I'll jump in.

I'm interested in hearing the conversations that are not broadcast on the drive-through frequency (ie. not the one that you can hear when you place your order).

I'm fairly new to the drive-through frequency thing, and I'm originally from Canada which might have different frequencies. Now that I'm living in the US I want to try this.

Couple of things though:

1. What is the frequency/range? Does it depend on the fast-food chain?
2. Is there a list that I can find for Indiana?
3. What is the broadcast range?

Thanks!

Mooker

1)My "return" is labled "Why Bother".
I suspect that your news/use group browser/reader upcut the text and you
ended up looking like "Why Bother" is your ID.
2)It is unlikely that the dear baby will learn anything from the TRANSMITTER
by it's bed. The parents might be able to learn a thing or two because they
would have a RECEIVER. But I doubt if I would use a frequency used by anyone
nearby. After all I much prefer to monitor the desired radio signals instead
of crying baby.

Clue: Receivers pick up what transmitters send.

But boy oh boy do I wish we all talk back through our receivers, I have some
comments for the evening "news" folks that would curl their hair!

I'm going to be headed home for the holidays in a couple of weeks, and I'm wondering if anything has drastically changed as far as public safety radio in the Grand Rapids area in the last couple of years. I'm assuming that GRPD and KCSD are still on their same VHF channels, but not counting on it. I'm also looking for a frequency for security at the new Rivertown Crossing mall. Any help is greatly appreciated.

Thanks,

Andy Clark

The system is designed to switch control channels every 24 hrs.

>Is this to distribute the load on those transmitters,

Yes, primarily.

>or just to give us listeners a hard time?

Yes, that's it... The do it to mess with you! :-)

Actually, they don't even care about scanner listeners.
It distributes the "load" to the 4 control channels
more or less evenly. Nothing more than that.

>2. Using the Pro-92, can I use the 'Closed Mode' to always skip the
>control channels, so I do not have find them and lock them out everyday.

A statement, not a question.

>3. Do control channels have a talk-ID associated with them?

No, a control channel is an R.F. channel, not a talkgroup.

>frequencies to choose from. Also another qestion i have is why is there a
>pattern of frequencis that are chosen when scanning conventionaly.

There is a pattern and it usually goes something like this:

Depending on channel loading.

The voice only channels and 3 of the 4 control channels are used
first in order. 5 channels on our system (minimum loading).

If the system gets busy enough, the Interconnect equipped channels
go into the mix next. 6, 7, or 8 channels

When the system is very busy, the encryption capable channels are
added. 9, 10 or 11 voice channels (maximum system usage)

e.g. on System 1B15 (City of Toledo), when channel 1 is the c.c.:

2, 3, 4, 11, 13, 8, 9, 10, 5, 6, 7
2, 3, 4, 11, 13, 8
2, 3, 4, 11, 13, 8, 9
2, 3, 4, 11, 13, 8, 9, 10
2, 3, 4, 11, 13, 8, 9, 10, 5
2, 3, 4, 11, 13, 8, 9, 10, 5, 6
2, 3, 4, 11, 13, 8, 9, 10, 5, 6, 7

when channel 2 is the c.c.:

2, 3, 4, 11, 13
2, 3, 4, 11, 13, 8
2, 3, 4, 11, 13, 8, 9
2, 3, 4, 11, 13, 8, 9, 10
2, 3, 4, 11, 13, 8, 9, 10, 5
2, 3, 4, 11, 13, 8, 9, 10, 5, 6
2, 3, 4, 11, 13, 8, 9, 10, 5, 6, 7

Where:

1-4 = c.c./voice

8-10 = interconnect equipped/voice

5-7 = encryption capable/voice

12 = unused

That's how our's works anyway.

Does anyone have any experience with this radio?

I'd like to hear some opinions on...

1.) Programming ease.
2.) Sensitivity
3.) CTCSS/DPL operation
4.) Backlight

and anything else that might might be good to know.

Thanks

4821. CHP Frequency and Dispatch Change

Be advised that the Mojave (59), Bridgeport (71), and Bishop (72) Offices have switched to Gold (42.12/42.20). 59 was formally white and dispatched by Barstow, now being dispatched by Bishop, 71 and 72 were formally on the blue and dispatched by Bishop and still being dispatched by Bishop. Traffic is being repeaterized on certain sites. South end Inyo Co. mobile traffic now being repeated on Conway Summit near Bridgeport. The repeater function is changing from time to time (different sites mobiles being repeated on different sites bases) as they experiment with different ways to make the whole thing work.

My "new" Pro2004 had a wierd problem, pin 14/!C501 was not being pulled up to 5 volts by the CPU [IC-503]
After much thought, and resoldereing every connection on the CPU board the problem remained. I carefully clipped and bent pin14/501 up, built a two stage transisor "buffer", connected the base of the first transitor to pin45 on IC 503 [GRE 0327/cpu] via a 1K resitor, that collector went to +5 [pin 16/ic501] via a 1k resistor also and the emiter was grounded to pin 8 . The base of the second transitor connects to the collector of the first via a 1k resistor. The collector goes to +5 via a 600ohm (I used the largest value that would pull pin 14 to +5V). The emiter goes to ground.
That output of the CPU just can not "Drive" a real TTL gate. I thought about putting in a CMOS but this was faster and it works. IF anyother outputs fails I will just build a little PCB that has six transitors, one for each output.
My next goal is to decioher a truth table for the PLL selction and see if I can generate the proper decoding from that data.
But for now the radio works great.
While I was inside, I added the diode to add the 100 additonal channels.
And of course I left in the diode that blocks the illegal reception of cellular communications.
I posted this because others might run into the same or a related problem.
Good listening
and
YMWV!

Any external battery pack won't be very portable. So, why not just plug in the wall transformer? Second, You could probably solder some wires on AA's, strap them together with some package tape, and use the old pigtail to plug it in; However, the way the 235's & 245's eat batteries this seems like more trouble that its worth....;-)

Bryan Costin wrote:

PL, stands for Private Line, a Motorola name for CTCSS

CTCSS stands for Continuous Tone Coded Squelch System. It's a system in which a subaudible tone is broadcast along with the voice carrier, which opens up the receivers squelch. This receiver can be a handheld radio operating on simplex, or a repeater's squelch or CTCSS equipped scanner.

It's a system used typically when multiple organizations want to share the same frequency within the same area.

There are standard tones, but there are also non-standard tones in use.

These are the 38 standard CTCSS tones used by Motorola systems:

Tone 01 67.0 Hz Tone 20 131.8 Hz
Tone 02 71.9 Hz Tone 21 136.5 Hz
Tone 03 74.4 Hz Tone 22 141.3 Hz
Tone 04 77.0 Hz Tone 23 146.2 Hz
Tone 05 79.7 Hz Tone 24 151.4 Hz
Tone 06 82.5 Hz Tone 25 156.7 Hz
Tone 07 85.4 Hz Tone 26 162.2 Hz
Tone 08 88.5 Hz Tone 27 167.9 Hz
Tone 09 91.5 Hz Tone 28 173.8 Hz
Tone 10 94.8 Hz Tone 29 179.9 Hz
Tone 11 97.4 Hz Tone 30 186.2 Hz
Tone 12 100.0 Hz Tone 31 192.8 Hz
Tone 13 103.5 Hz Tone 32* 203.5 Hz
Tone 14 107.2 Hz Tone 33* 210.7 Hz
Tone 15 110.9 Hz Tone 34* 218.1 Hz
Tone 16 114.8 Hz Tone 35* 225.7 Hz
Tone 17 118.8 Hz Tone 36* 233.6 Hz
Tone 18 123.0 Hz Tone 37* 241.8 Hz
Tone 19 127.3 Hz Tone 38* 250.3 Hz

4835. The Pro 92 Still SUCKS!

What advantage is the PC interface for $70 when all you can do is upload and download frequencies? BIG DEAL! You can't control the radio like you can the Uniden 245 XLT, AR8000, AR8200, Yasu VR500 etc. And $70 for what? Why isn't the cable for FREE with a $350 radio when they give them away with the $200 Uniden? Why don't they include batteries or a recharger for that price like the others? Radio Shack is laughing all the way to the bank when they sell one of these radios made and packaged according to Tandy specifications!

An what advantage is the alphanumeric with that crappy backlight? The Uniden 245 XLT not only has a decent green backlight but it comes on for five seconds at the start of every transmission. Can you honestly read the display easily with the PRO 92 internal light?

The BC 245 XLT has more meaningful alpha text if you use it hooked up to a PC when you add the Canadian Sennse FREEWARE for the BC245 XLT. How much more text? Something like 32 characters per id for a description not a meager cryptic 12. Now you aren't going to carry a PC with you all the time but then what good is the PRO 92 radio if you can not read it at night or driving with dusk approaching?

PL is for Private Line (Motorola). It is used to keep a receiver quiet till it receives the proper tone. Great if you have multiple users on the same frequency. Tones are in the range of 88 to 205 hz.

Redding Police used to only have 5 freqs and the control channel switched amongst 3 of them. Now there are 7 freqs and the control only uses 2 of them. What I do on my Pro-91 is lockout all trunked freq in conventional mode and when I trunk track, I still scan all conversations.

> shack pro 99)

Excellent on 27MHz (CB band), reasonable from 20 to 40 MHz.

Performance drops the further away from the resonant frequency you get...
poor on VHF/UHF.

I suggest you get a discone for general scanner listening or a tuned dipole
(FM stereo dipoles 88-108MHz are easily modified for higher frequencies) if
you're interested in a particular band. A dipole will give excellent
results over about 5MHz and reasonable results over 15-20Mhz.

EG. If you cut a dipole for 160MHz it will work well from 150 to 170MHz.

A discone gives so-so performance (not fantastic) but it works over a huge
frequency range.

Mount your antenna(s) as high as possible and use good quality coaxial cable
for best results.

Hello Barry,

It could seem like a nice joke repeating all that "zeroes" trash that
guy posted (hopefully by mistake), but you did it on purpose, and
TWICE.
Isn't this a waste of bandwidth for us reading this newsgroup?
You could have done the same without all that garbage of zeroes,
simply writing <snip> instead of all that junk, and we would have
understood the same (and maybe liked it a little more).
The second time was a pure waste.
I hope you take this as a friendly guidance to netiqette.
cheers.

Thanks and best regards,
T-man

To all!

One of the frequency reference web sites (I do not remember which) had Henrico County Virginia listed as a Motorola Type II system.

I was there this past week end, and on ever frequency listed, all I was able to hear was digital type transmissions. One channel had it continuos. I am assuming that was the control channel. The others were intermittent.

It appears that this is NOT a type II system, but possibly an ASTRO Digital System.

If any one finds a web site showing the wrong info, please contact the writer of it and request they correct it.

If any on finds a site with the correct info, please let me know.

Frequencies for Southwest Airlines

>> I have two primary frequencies as: 129.2500 and 131.7000,

> Southwest Airlines is on 131.7000 in San Jose (SJC).

Great, I know they're using that frequency over at
Sacramento Metro (SMF) and down here at Ontario (ONT).
The 129.2500 is for San Diego (SAN), Los Angeles (LAX),
and over at Las Vegas (LAS).

Out here in tbe semi-boondocks we sometimes lose power for hours at a time
when there's a bad thunderstorm or a blizzard. Unfortunately wall
transformers aren't very useful under those circumstances. :-)

4846. EDACS in Shelton CT area

Newsgroup: rec.radio.scanner
Date: 1999-11-29 00:00:00 UTC
From: Barun Gupta <barun@worldnet.att.net>
Message-ID: <38432420.4433259A@worldnet.att.net>
Source record: 101040

I just got a brand new BC245XLT. I have tried some of the CT EDAC frequencies for New Haven county and Fairlfield county but with no luck. I figure I must be doing something wrong. Either I don't have the correct sequence of frequencies or its something else. Is there anyone out there knows frequencies for EDACS systems that can be heard in Shelton CT? Would appreciate that list in the correct sequence.

Has more than 12 memories -- also has CTCSS squelch (Full PL). As I recall you punch in the frequency in the VFO mode, then hit F key then dial in the memory location then hold F key again.

Recommend you contact Yaesu for manual or one of the other sources of manuals on the net. FT-470 is a great little rig and does lots of neat stuff.

4854. Trunked Scanners -- Control Channel Question !

Newsgroup: rec.radio.scanner
Date: 1999-11-29 00:00:00 UTC
From: Greg Davis <gdavis9999@my-deja.com>
Message-ID: <81t0f9$r07$1@nnrp1.deja.com>
Source record: 101067

For all you scanner experts:

1. Why does the control channel(s) change everyday (at midnight is seems). Is this to distribute the load on those transmitters, or just to give us listeners a hard time?

2. Using the Pro-92, can I use the 'Closed Mode' to always skip the control channels, so I do not have find them and lock them out everyday.

3. Do control channels have a talk-ID associated with them?

Thanks in advance..... Rgds, Greg

4855. Pro-92 EDACs Question

Newsgroup: rec.radio.scanner
Date: 1999-11-29 00:00:00 UTC
From: Greg Davis <gdavis9999@my-deja.com>
Message-ID: <81t0nh$r2g$1@nnrp1.deja.com>
Source record: 101068

Another question about the Pro-92 for the scanner experts:

1. Do I really need to start with channel 1 to input the logical channel numbers using EDAC... or can I start with channel 0 (perhaps this is a misprint in the manual??)

2. Why do you need to put the logical channels in order?

3. Do I need to devote a SINGLE bank to a SINGLE EDAC system, or can I put several EDAC systems in ONE bank?

Thanks in advance..... Rgds, Greg

4857. FS: Icom R7000 Communications Receiver

Newsgroup: rec.radio.scanner
Date: 1999-11-29 00:00:00 UTC
From: jimdpeters@aol.com
Message-ID: <19991128220043.20767.00001480@ng-fn1.aol.com>
Source record: 101070

I have the following Icom R7000 communications receiver for sale. I have two of these and want to sell one of them. "See picture" I will give you the choice of either radio. The top radio in picture has a meter light that is not working. The top radio also has the "Speech Option". The sensitivity on both radio's is virtually the same "VERY GOOD". Other than the meter light on the one radio not working, both radio's are in EXCELLENT working and cosmetic condition. I need the money that is the ONLY reason I'm selling one of these.

<A HREF="http://members.aol.com/jimdpeters/icom7000.jpg">For Picture of the Icom R7000 Click Here</A>

Considered by many to be the top of the line VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB, AM, NFM & WFM allows reception of most everything you want to listen to. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recording.

IC-R7000 SPECIFICATIONS

Frequency Coverage 25. MHz to 2000 MHz. "with a gap between 1000 MHz & 1025 MHz".
Mode: Upper & Lower Sideband, AM, wide FM, narrow FM
Memory Channels: 99
Tuning Step Increment: - 0.1, 1, 5, 10, 12.5, or 25 kHz.
Power Supply Requirement (U.S.A): 117 Volt AC
Usable Temperature Range: +14ï¿½F ~ +140ï¿½F
Dimensions: 11.3(W) x 4.3(H) x 10.9(D) in
Weight: 17.6 lbs.

The R7000 has (6) seperate scanning functions:
1. Priority Scan
2. Programmed Scan
3. Selected Memory Scan
4. Selected Mode Memory Scan
5. Memory Channel Scan
6. Auto-Write Memory Scan

Both receivers come with the original box and styrafoam packing, and owners manual. The radio's have been in a non-smoking environment. I'm asking $750 for the radio. For that price I will ship it and insure it.

If you have any questions I will be very happy to answer them. If the radio does not sell for the $750 I'm asking. It will go to the highest offer this Friday (12/3/99).

Thanks Bob. It's a familiar function from other sets, but used in reverse a bit. Am using the ADMS sw to program it so I'll just place a check mark in the Preferential Scan column for all freqs and "untag" the ones I want to skip. Seems a good set otherwise. Stock antenna is pretty worthless, but the little rubber Maldol "Active Hunter" antenna works great. Am taking it on a trip to Dallas and Boston this week and will play further.
Thanks for the quick reply.
Phil

: > I see digital as the primary mode in the future, even for Hams. It
gives
: > better clarity and better coverage. In time, it will make it into the
:
: Public safety agencies who have been using digital modes report exactly
the
: opposite. Equal coverage from a digital system to an analog system
requires
: higher transmit power and/or more transmitter sites. When the batteries
: start to get low in dual-mode portables, the users generally have to
switch
: to analog mode to continue talking.

Digital is still the way things are heading.

: > You got it wrong. Cops want to hide the fact that they talk
: > racist bullshit and talk about women on the radio. Before
: > scanners, cop radio was more like CB.
:
: I have not ever heard CB-like traffic on a police radio. However, I can't
: deny that it might happen in some types of community (either very rural or
: very large cities).

It was that way back in the '60s before scanners. Cops had
hidden channels that were hard for the public to find. Remember
we used tunable receivers, much like shortwave, for police radio
receivers.

4861. Anybody in here sell Bearcat scanner parts?

: the future of scanning? how about being able to order your own customised
: scanner? you tell the retailer what frequencies and features you want and
: presto!

That would be possible with DSP receivers. The front panel
would be the same. Just program it with the bands and modes
wanted plus what control features you want. Instant custom
radio.

New technology would be no problem as the radio would be
reformated with the the newer modes. DSP, after all, is mostly
software.

4863. Pro-92 Charging Current (can I get faster using 800 mA??)

I've measured the current drain of 24 portable scanners (one
sample of 24 different models).

While in the "scan" mode, an ICOM IC-R10 (s/n 01048) drew the most
current: 158 mA.

Second place went to an AR8200 (s/n 550004) which drew 139 mA.

The manual is correct on this one. Start with channel x01.

> 2. Why do you need to put the logical channels in order?

You have to put the frequencies in in the order the their Logical Channel
Number. This is how EDACS knows which channel to go to.

> 3. Do I need to devote a SINGLE bank to a SINGLE EDAC system, or can I
> put several EDAC systems in ONE bank?

One system, one bank.

My 92 stands on it's own with no problem in this "skin-tight" case. Check
http://www.strongsignals.net/pastnews.htm in the Nov. 12 box for links to
pictures of the radio in the case.

4872. Pro-94 delay guestion

Newsgroup: rec.radio.scanner
Date: 1999-11-29 00:00:00 UTC
From: outrunsho@aol.com
Message-ID: <19991129021146.07764.00001298@ng-cs1.aol.com>
Source record: 101085

Is there any way when trunking to not have a delay when listening to two site channels. Or like if I am scanning ed on bank one and a motorola on two the scanner waits 5 seconds to see if there is anything before moving to the other bank or other city that i have programmed. Can I take this out have it just scan straight through. Thanks Jason

> seems). Is this to distribute the load on those transmitters, or just
> to give us listeners a hard time?

I think that is a good question. I have wandered the same thing. I know that in the area I live in it changes every night at midnight and it uses a total of 4 frequencies to choose from. Also another qestion i have is why is there a pattern of frequencis that are chosen when scanning conventionaly.

I sure jhope that the RatShack version is much cleaner than the "Sound Feeder" that I was given last summer. The SF has a lot of spurs, down in to the 6mtr (50-54MHz) ham band and up in the 460MHz range. Glas yours works for you. With my set up I saved $21.00 and it can still be used as intended when my wife watch a friends baby!

One word of caution, I live in a high RF area and the MCA204 provides some gain. When I hooked up the multicoupler I got a lot of intermod below about 150Mhz. I sent the multicoupler back to have it checked out and there was no problem. After some further investigation it was determined that the problem was from FM broadcast stations. The slight gain of the multicoupler was enough to push the signal over the edge. After installing an FM trap (also from Stridsberg) the problem went away.

One thing I will say is how helpful Mr. Stridsberg was in solving my problem at no charge. I talked to him on the phone several times and he ran the multicoupler through quite a few test to help determine if the problem was with the multicoupler. You could not ask for better service. I was very impressed.

Fred
I have had a 7100 for about 3 years and it has performed just fine for me.
If you buy one from the UK you have to furnish you own wall charger sine the
prime voltage in the UK is 220VAC. My vendor sent a cig lighter adapter so I
could charge it from the car.

Source record: 100859

The 5 second delay is inherent in the scanner design. The Uniden model does it, too. The better scanner, the PRO-92, uses an entirely different scheme so therefore, it doesn't suffer with the same problem.

Once I entered the EDACS freqs correctly , my PR0-94 worked flawlessly. It tracks Motorola fine as well.. It also functions well in conventional mode. To me it was $200 well spent. The 92, I have not even held, so I cannot comment.
The 94 looks like a Uniden, is it? I haven't opened it up.

This is a 300 channel Base scanner that is almost like brand new.
It covers the following Frequencies:
29.-54 Mhz
137-174 Mhz
216-512 Mhz
806-956 Mhz
It also has Trunk Tracking, One touch weather, Turbo Scan, Built in
CTCSS, RS232C Port, V.F.O. Tuning, 10 Priority Channels.
This scanner on a scale of 1-10 is with out a doubt a "10".
I will sell it for $175.00 + $10.00 shipping to any address in the U.S.
I will only accept a U.S. Postal Money Order.
Contact me by Email if your interested;

Hi Roy,

Where did you hear this rumor? I just purchased a new Pro 92 about
2 weeks ago and it has full coverage of the 29 to 54 Mhz band.

Hi Greg,

This is most likely an image from the 460 Mhz band. What type of
scanner are you using? Is it a Triple Conversion receiver?

Also the frequency offset for the 482 Mhz band is 12.5 khz with
a 25 khz step (ie 482.5125, 482.5375).

Bob

JimBoy,

I assume these are Type 1 or 2 freqs. If they are, then try setting your
squelch in different positions before going into the TRUNK mode.

It is now possible to turn your feces into GOLD!

I have uncovered an ancient Egyptian Sceret that gives you
the ability to turn your shit into gold.

By using a mirror you can see the process take place..

Normal fecel matter will turn to a brilliant gold as soon as it touches
the air, just as blood turns from blue to red.

But this is actual gold, Many people have used it for fillings, earings
etc....

Last chance, so reserve your information packet today!

I use a GE vox recorder and it works fine just setting in front of the speaker.
It has a variable vox adjustment and I set it for low(about 3) I hear no hiss.
But of course you should use a cable but then you cant listen in while you
record.
I agree with the reader that you should use the resources that you already have
and pick up a FREE copy of either "voxrecorder" or "scanner recorder" from
several sources on the net. You should use a zip drive for long periods of
recording but you can save to desktop for little used channels.
I wouldn't spend ANY money for something you can get FREE. Regards

Here`s a nice 100 channel base scanner in very good condition with box
and owner`s manual, it cover`s the following frequencies:
29-54 Mhz
108-174 Mhz
406-512 Mhz
AM-FM
Also Weather Scan & Alert, Service Search Feature,and Data Skip.
The back light on the frequency display is burned out, but that was
never a big deal to me.
The scanner still operates very good.
I will sell this unit for $70.00 + $6.00 shipping to any address in the
U.S.
I will only accept a U.S.Postal Money Order.
If any one is interested, contact me by Email;

Just bought a ATT DSS 900 mhz cordless/answer machine model 9450.
Works well but who came up with the incredibly loud and obnoxious beep
everytime you hit a key. We have a large house and it echoes thru out
the house. Otherwise it works better than the Casio and Uniden we
tried (both dss, Casio was 900, Uniden was 2.4 gighz).

Message-ID: <slrn847ksf.n5e.mrbill@ohno.mrbill.net>
Source record: 100895
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I've got a Pro-43, with rubber antenna and AC adapter, with a 11A2 date code (the cellular-unblock mod has been performed, but not the one to re-enable 54-88Mhz) that I'm looking to trade for either a good dual-band handheld or a basic packet radio setup (with all necessary cables, etc). Alternately, will swap evenly for a Pro-2006. Will consider other offers as well.

Scanner is in great condition (missing the belt clip, but I can probably come up with one if you want), and I use it every night to listen to the Austin police department.

Feel free to send questions to the address below.

Bill

4923. Advice on scanner?

Newsgroup: rec.radio.scanner
Date: 1999-11-30 00:00:00 UTC
From: Ryan <rvkeller@iupui.edu>
Message-ID: <3843E566.560D19E2@iupui.edu>
Source record: 100898

Hello all,
I am looking at purchasing a scanner in about 3 months. Since I have an actual police radio for Marion Co./Indianapolis, IN I am not that concerned with trunking, however I do what one that can follow trunking freqs. I have seen that new radio shack scanner that came out that covers all the trunking systems used in the country (per the employee). I also want one that can allow you to hear both VHF and the 800 meghz channels the same time. The reason this is important is that some of the Indiana State Police Districts are on trunked systems, however they also us a state wide VHF channel which I would want to hear if I am scanning, along with their primary 800 Mhz channels. I have heard that this new radio shack scanner can do this. It also has 500 channels and date(?). I asked the clerk if it was going to go on sale for X-Mas and he said he doesn't think so cause they believe it will sell due to the extra trunk system it picks up. My main concern is the of digital trunk systems. I live in a county outside of Indy and they are going trunked as well, I am not sure if it will be digital or not. The county is Hancock. Anyone have any info about that county or Indiana State Police going digital? Are more and more depts. going digital to start out or upgrading? Any departments that went digital that changed due to problems (that could be followed by a national trend?). I really do not think that digital or even 800 Megs will last much longer. You ask why? Because there is growing evidence that cell phone radio waves are causing tumors (cancerous) to form on peoples heads. Yes these are people that use cell phones very very often. Most police have their small sholder mic antenna really close to their head as well. Just like with the old radar guns that were causing tumors in officers pelvic area that were later banned, I think if one officer develops a growth, many depts. may stop using the 800 megs. Just my opinion, it may never happen. Anyways, just let me know your opinions about the scanner, thanks ryan

In the generosity of the holiday season, let's say the RS salesman
believed what he told you. He was wrong.

You _might_ need an recording level attenuator adapter or cable, or an
adapter to fit the scanner output to your VOX recorder input (1/4"
or1/8" or 3/32", or one output to mic and remote) depends on what
equipment you have, but $10 should be plenty.

If you want to spend more than that you might still be able to find a
"Nitelogger" 'recorder interface', or Ramsey
Electronics® www.ramseyelectronics.com
probably has a similar item as a kit or assembled, but it is kind of
like wearing suspenders and a belt.

Hope this helps.

I have a Bearcat Sportcat handheld, all stock, and I want to know, is there a better antenna avail. than the rubber flex. one that comes with it? I'd still like to stick with the short flex. style, but maybe a loaded one.I pick up cordless phones, cell phones, etc., but I have to turn and twist the radio to keep recep. decent. I thought a better ant. might help. Could someone recommend a brand / model # ? Thanks for any help.---DT.

Go to a HAM store of some kind and get NITELOGGER II.. It plugs between a
cheap old tape recorder and a scanner. It gives you the Voice activation your
looking for and does the job VERY well. I have used it on MANY occasions.
Again it allows you to use ANY tape recorder (which has a MIKE input along
with a MIKE control input-most tape recorders have this)..
Hope this helps, Chris.

HAMFEST/COMPUTERFEST CALENDAR 1999/2000 - NORTHERN ILLINOIS
last updated November 16, 1999 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

NOVEMBER 1999

Nov 13 (Sat), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Nov 14 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

Nov 28 (Sun), Wheaton, IL - GMRS fest. Dupage County Fair- | grounds.

JANUARY 2000 |

Jan 23 (Sun) - Cicero, IL - Wheaton Community Radio Amateurs Mid Winter Hamfest - 2000 at the Chicago Motor Speedway. 3301 S. Laramie, Cicero. Located between Central and Cicero, between the Ike and the Stevenson. Tickets $5.00 in advance with 4 stubs. Free parking. Info: www.w9ccu.org or send email to hamfest2k@hotmail.com.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer
expo. The event is held on designated Saturdays from 9:30
AM to 3:00 PM. This show features computers, supplies,
games, parts, software, accessories, CD-ROM, monitors,
diskettes, printers, keyboards, modems, disk drives, cables,
expansion boards, services, etc. Lake County Fairgrounds,
Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall
Building #1=9720,000 sq. feet. For a show map, exhibitor
info, and discount coupon, visit the web site at
http://www.ccxpo.com.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS

(Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to

use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association

(RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want
to eat or drink, bring it with you, as well as your BBQ or
six pack.

Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and

2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

----
25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robet Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://dune.globe-net.net/~rc123/Robert/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not

specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0

- 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band.

Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT

Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor

contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed

backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by

Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct

channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45

MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64,"

by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and

Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor

dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay.

CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out

("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios.

Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a

custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

4940. Re: Recording from a scanner ?

Newsgroup: rec.radio.scanner
Date: 1999-11-30 00:00:00 UTC
From: "D.R. Watkins" <drwatkins3@erols.com>
Message-ID: <820ualgbc1@autumn.news.rcn.net>
Source record: 100915

Don't forget the resources that you already have. If your PC has a sound card, why not use it? You can go to:

www.sagebrush.com

and check out RecAll. A nice voice activated, time and date stamping recorder. You can use GSM compression, and get a little over 10 minutes per meg. It even has timers so you can set it when to go on and off. Thirty day trialware, under $50, GREAT program.

The RadioShack guy was a little right, but mostly wrong. If you use a cheap tape recorder with VOX it will likely hear the 'hiss' coming from the speaker or headphone output. However, MOST tape recorders offer a sensitivity adjustment that will prevent this. A tape recorder with VOX just above "bottom of the line" status should work fine.

When you get a tape recorder make sure that it has a MIC jack and a REM (or REMOTE) jack. You can utilize the REM jack to control the pause using some radio scanners like the Uniden BC895XLT.

You can expect to pay about $50 or $60 for tape recorder with VOX and a seperate MIC & REM jacks.

To answer the question directly about the name and address issue at RadioShack, I would like to explain as to why they do it:

RadioShack's business was built almost exclusively on repeat business over the
years. The way this was done, was to send a sale's flyer to repeat customers across
the board. Now with the aid of their new POS system, they can selectively send flyers
to select customers based off of frequency of purchases and even type of purchases.
Contrary to popular belief, RadioShack does NOT sell their customer database. Why would
they give out the names of their most loyal and dedicated customers to someone else? It is
true though, that they also use this same database to send out birthday discount certificates
and the like occassionaly and even send out pre-approved accounts, but the list isn't sold or given
out to non-strategic partners. Some of the other reasons for name and address gathering is to help
with warranty issues and to help develop better marketing to target groups.....male, female, etc.

Over 85-90% of RadioShack's customers do not have any problem in giving their name and address.
To the remaining 15% or so, if you don't want to....then it is very simple.....DON'T. They can't refuse a
sale with cash on regular products if a customer doesn't want to disclose their name & address. The only
exception to this would be products requiring services such as cellular, pagers, DSS, etc.
Their associates are required to ask each and every customer....it's their job. Taking your personal frustration
out on them about the issue is absurd!!! Write the company if you don't like their policy and they will pretty much
say the things as I have.

It is RadioShack's intent to make all of their customers have an enjoyable shopping experience while in their
stores. Even those few who want to remain anonymous!!! They still want your business!

GO TO YOUR LOCAL RADIO SHACK AND PICKUP
A SIGNAL BOOSTER. DEPENDING ON WHAT FREQUENCY
YOU WANT TO BOOST, IT WOULD BE A CAT NO. 15-1115 OR 1116, I
THINK. YOU EITHER NEED TO SWITCH OVER TO A HIGH GRADE TV COAX
CABLE SUCH AS RG6 OR RG6 WITH QUAD SHIELD SINCE THE AMPLIFIERS
HAVE F CONNECTORS OR YOU CAN SIMPLY PURCHASE THE RIGHT ADAPTERS
TO FIT YOU CURRENT CONNECTORS. KEEP IN MIND, THAT IT DOESN'T MATTER
WHAT OHMS IN THE CABLE YOUR USING FOR RECEIVING SO THEREFORE TV CABLE (RG6)
WILL WORK FINE...ACTUALLY BETTER BECAUSE OF THE BETTER SHIELDING THAT THAT
OF
RG 58. IF YOU HAVE ANY QUESTIONS YOU CAN EMAIL ME dperrin@ebicom.net

4952. Re: Pro-92 Charging Current (can I get faster using 800 mA??)

Newsgroup: rec.radio.scanner
Date: 1999-11-30 00:00:00 UTC
From: Don Perrin <dperrin@merlin.ebicom.net>
Message-ID: <8211j2nif1@einstein.ebicom.net>
Source record: 100927

No it won't. There is a current limiting circuit in the scanner.
Plus, all Ni Metal Hy batteries need to charge at a slower rate.
If you want to charge these type of batteries in the scanner, then
the charging time will need to be increased to around 36 hours, which
in most cases in impratical. With 1500 ma of current per battery comes a
price!
Your best bet is to use the regular high capicity batteries that RadioShack
sales.
If you have any further questions, you can email me : dperrin@ebicom.net

The Austin® "Condor"☐ is a 12" rubber duck type antenna that might give you better reception than the scanners' original equipment. It is (or was) about $25, look for ads in Popular Communications© or Monitoring Times©
magazines, or their websites.

A telescoping whip is probably your best solution, though.

Hope this helps.

a major marketing strongpoint in the 245 is obviously portability and field use...
the battery issue sadly limits the value in the field.....many of us are not able or do not want to recharge. photo equip manufacturers have gone to AA's whenever possible and I am very disapointed Uniden has not used AA as well

What I mean is if you are trying to scan edacs and motorola two different systems. The scanner will not just scan both systems straight through. It has a 5 sed delay before changing to another sight channel. I am not talking about the id delay I know that I can turn that off.

4960. slicers and capacitors

Newsgroup: rec.radio.scanner
Date: 1999-11-30 00:00:00 UTC
From: D Stark <dave@nf2g.com>
Message-ID: <HsV04.11863$JD1.801835@typhoon.nyroc.rr.com>
Source record: 100935

Various circuit arrangements for attaching data slicers to discriminator taps have differing specifications for capacitors at the tap point. One that I was going to use requires a 6.8 mfd tantalum capacitor at the discriminator tap. Naturally, Radio Shack doesn't carry that value, so I intend to string together a pair of 10 mfd capacitors, yielding a value of 5 mfd.

Does anyone know if 5 will be "close enough" to 6.8 that the interface will operate correctly?

Mild rebuke

Perhaps you failed to notice the following:

1. The message is from dinks@sympatico.ca Most internet users would know
that .ca means Canada. I am also Canadian even though I am at a .com.
2. In his message he specifically says "$300 (canadian)".
3. At current exchange rates, the $300CDN is $205USD.
4. The current selling price in Canada is $459! (about $313USD)

I spoke to the dealer to confirm the price. When I told him the US price, he
just shrugged his shoulders.

The bottom line is that this is a great price for Canadians (a saving of
$159)

Next time, read and understand before you reply.

Regards,
Ron

p.s. I would buy it in a heartbeat if I had not just bought a PRO-91 (my
first scanner).

4966. We Want Your Input!

Newsgroup: rec.radio.scanner
Date: 1999-11-30 00:00:00 UTC
From: Pozilla Software <pozillasft@scanner.aol.com>
Message-ID: <pBX04.45897$HU2.96974@news.rdc1.az.home.com>
Source record: 100941
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Greetings!

Pozilla Software is in the beginning stages of developing another scanner control program. We would like YOUR input on which scanner we should develop software for next. Please keep in mind that we are already developing for the following scanners:

* Uniden SC200
* Radio Shack Pro-92
* Radio Shack Pro-2052

We want to know what scanner YOU, the scanner community, would like to see a version of WinScan for. Here are the guidelines for choosing the scanner you would like to see software for:

1. It must be a stand alone scanner with a computer interface.
2. It must be a scanner that is currently in production and readily available.
3. It has to be US legal.

Other then that, have a ball. The most votes for a particular scanner wil have software developed for it starting in the first quarter of 2000. Voting will close on Dec. 31, 1999.

One last item... We will begin developement of WinScan Version 2.0 for the Uniden Trunk Trackers (245,895,etc.) in early 2000. We would like your input and suggestions for the new version of WinScan, scheduled for release in May 2000!

We look forward to your input! Remember, without YOU, WinScan cannot be a program designed with YOU in mind.

Warmest regards,

Adam Goldman
Chief Operations Officer
Pozilla Software

>operate correctly?

It will probably work. However, I caution you that the frequency response of two plain 10 uF electrolytic capacitors in series isn't going to be all that good. That's why the specification calls for a single tantalum capacitor. They have a reasonably consistent response which should get you through the audio spectrum without any problems.

In any case, the value of the capacitor and the likely impedance of the slicer is such that I can only envision one purpose: blocking DC biases from off frequency signals so they can't swamp the slicer. I would substitute a lower value tantalum capacitor instead. Even a 2.2 uF tantalum capacitor would probably work without any problems. I doubt it will affect the signal as much as two 10 uF electrolytics in series.

Yeah! I sure do. Love it!
>
> I'd like to hear some opinions on...
>
> 1.) Programming ease.
Programming is fairly straight forward. Plug in a frequency, then press the display button (to activate alpha's) and press E. Then rotate the VFO on top to rotate amongst A-z, 0-9 and some others, punctuation, symbols, etc. Takes about 15 minutes per bank if you do all 200 with alphas. 0-9 can be entered from the keypad as can a space (press CLR)

> 2.) Sensitivity
It's no 895, but it works. I've noticed it can be kinda deaf sometimes. On a positive note, I have yet to receive pager noise on it, even without CTCSS activated! Nice!

> 3.) CTCSS/DPL operation
This too is fairly simple and works well. It has a search feature but it's slow. You hold down the SUB button until it starts to flash, then press E when the PL comes up. If you know the tone already then just press sub, E, and rotate the VFO to select it, then E again. It will then alternate the display between the tone and frequency or alphatag. (I don't like that, myself, but it's just a minor gripe of mine. I'd prefer it not to flash like that but.... I know, whine, whine, whine...)

> 4.) Backlight
Backlight is nice and bright. I like it. Has a LCD dot matrix display, ala BC9000, which is big and easily readable. The autolight doesn't suck the battery up too quick either, which I like.

>
> and anything else that might might be good to know.

Beside the fact that it's kinda funny looking, I really like this scanner. It's small, robust, works solidly. A great starter radio for a new guy or gal who doesn't need trunking.

And of course (please forgive the shameless plug) I'm almost finished writing programming software that allows you to program all 200 channels plus alpha tags via your PC. Keep checking this page for details on it: http://mghusa.com/pozilla/winscansport.htm

Overall, this one is a keeper. The one I'm using for development is an office scanner that I have to return (sniffle..) so I'm getting one of my own before then, or shortly thereafter! ;-)

SC200 is very nice radio, I would compare it to the relm HS200 but better in that its got alpha tags (10 character) and a backlight that WORKS! (green). Also the backlight can be set to come on when the radio stops on a transmission.

Seems as sensitive as the HS200, very good without any intermod, and Im in a good intermod area (NYC).

PL/DPL is very nice and unlike the pro 92, it WORKS also.

Audio is very good. I can hear it in a noisey work van.

Hope this helps, I like it alot.

Yes, what you heard is ASRTOï¿½ Digital Trunking. The control channel
is analog, so you can still track it like the Motorola System. North
County San Diego Sheriff's are on an ASTROï¿½ Digital system, but share
the trunking freqs with other analog radios; Such as Fire Dept. So its
kinda weird. I can track the digital transmissions, but why? Lame ;-(
And what I hear are the encoded transmissions that seem intermittent.

Good Luck

Craigï¿½

Sheesh,

Another happy customer! I in no way made mention of the SC200 replacing the Pro 92, I was asked however where one could VIEW one of these fine radios.

If its a pro 92 you like, why not race out to radio shack and buy one, just be prepared for dissapointment.

And as always, have a nice day!

4975. Alameda County and Santa Clara City Trunked Systems...

Newsgroup: rec.radio.scanner
Date: 1999-11-30 00:00:00 UTC
From: jeff.adams@gdfeg-es.com
Message-ID: <38432bbe.858881876@wlbr.iipo.gtegsc.com>
Source record: 100962
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a few questions, but they are probably of limited interest to most so I apologize in advance. The frequency lists I have seen for Alameda County and city of Santa Clara trunking systems varies. Does someone know of an absolutely accurate source (same question for talk group ids)? The Santa Clara system doesn't have much traffic - either I'm missing some frequencies or it's just not a very busy city.

Next question is, has anyone else noticed that for Alemeda County, the

audio quality on 866.425 is always kind of "crackly" and broken, even with good signal strength. Doesn't matter which talk groups. Conversely, if a specific talkgroup shows up on another frequency, it is fine. I have tuned off-frequency and even used the 8200's "AFC" to "fine tune", but the audio is still substandard. There are a couple of other frequencies where this happens, but right now I'm only looking at this one freq.

Anyone know what's up? It does this on three different radios, so I don't think it's my scanner...

Thanks in advance,

I really like how Radio Shack decided to include a CLONING cable with that radio and make you go out and BUY a wall wart to charge or power the radio up at home! Im surprised the box didnt say "Antenna not included".....

I bought a toy HESS truck today for my son and guess what!?! The batteries were in it!

Lets see all the pro 92 lovers come out of the woodwork and defend this one..

BOO HOO RADIO SHACK, give us a break! This wasnt a $200 dollar radio your giving us, at least INCLUDE whats needed to run this thing...

(oops, sorry..... Mine went back already) Long live the 245!

For Sale: Motorola Saber I Secure - VHF w/Accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207518634

Model #- H99QX052A
Factory ID - H43YXN7139CN

12 channels
6 watt output
146-174Mhz
SECURENET-S capable
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
VERY Good High-Capacity Battery (W&W Brand I believe)
Antenna
Remote Speaker/Mic - Model NTN6128C
Belt Clip
D-Ring Clip w/Belt Swivel Attachment

This unit is in excellent shape (but has some small surface scratches on front). It is guaranteed to be in 100% working condition. All included accessories (except battery) are genuine Motorola parts and all are in perfect condition. Selling because it is not needed anymore. Reserve price is VERY reasonable. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207518634

Good then they can cry all the way back to the bank to get the refund for each and every dissatisfied customer. I couldn't agree with you more about all of the drawbacks to this radio.

The light sucks, the useless so-called trunk tracking, the short delay, the loss of CTCSS in manual, and the fact that they expect me to shell out $70 to program this thing with my PC are all too much for me to spend my hard earned cash for.

After years and years and years of not buying a RS scanner (except for the PRO-90 which I admit I like) I've learned a quick lesson in economics. This radio is not worth $150 not to mention the $350 it lists for. Back to Uniden where I can get a scanner I can actually use.

ok, i wanted to run it on a 12 volt battery, so won't do that then. i
still can't figure out why radio shack, or who ever built the scanner
wouldn't design it to run on 12 volts. thanks for info.

When it displays the tone, hit trunk. Somewhat arcane, but it works.

> If so please feel free to email me, if you want.

Hi, I use a really crappy old handheld voice-operated tape recorder
with no problems at all. It has a mic jack so I got a cable to go from
the earphone plug on the scanner to the tape recorder and experimented
with what volume to set the scanner on during recording. Works great.
The only way hiss from the scanner speaker would be a problem is if
you're trying to use a recorder's built-in mic rather than a cable
between the two. I assume it's still possible to get cheap recorders
with a mic jack. It was when I got mine.

Good luck,
A

> So.....that's why ICOM calls it a "receiver"? All along I thought they screwed up when I couldn't find a mike in the box, and saw nothing about operating the cabinet speaker in duplex in the manual....guess I can withdraw that nasty E-mail about their lack of quality control and stop trying to cram the mike connector into that hole in the front of the cabinet! Some comments -

1. Thanks for the info re: the "Why Bother"....I would never intentionally look to be discourteous.

2. Re: the babys's 1st words, good call.....you are right! However, when our daughter was small, my wife used a duplex baby monitor, linked to the intercom system in the house. So, we could hear, but also speak. Didn't work very well when the baby was crying, but we could hear/speak as well as the baby (conceptually, since she really wasn't too chatty at 1 month old.).
Regards,
Marc

[....]

A small point, but that is the tone set used in amateur radio. Motorola uses the EIA standard set, with some minor variations in the alpha-numeric designators.

From the FAF - Frequently Asked Frequencies
on http://www.strongsignals.net/htm/oak_faf.htm

CTCSS (PL) Frequencies

Freq Designator Freq Designator Freq Designator
(Hz) EIA Ham (Hz) EIA Ham (Hz) EIA Ham

67.0 L1 01 107.2 1B 14 173.8 6A 28 |
69.3 WZ 110.9 2Z 15 179.9 6B 29 |
71.9 L2 02 114.8 2A 16 186.2 7Z 30
74.4 WA 03 118.8 2B 17 192.8 7A 31
77.0 L3 04 123.0 3Z 18 203.5 M1 32
79.7 SP 05 127.3 3A 19 206.5 8Z
82.5 L4 06 131.8 3B 20 210.7 M2 33
85.4 YA 07 136.5 4Z 21 218.1 M3 34
88.5 L4A 08 141.3 4A 22 225.7 M4 35
91.5 ZZ 09 146.2 4B 23 229.1 9Z
94.8 L5 10 151.4 5Z 24 233.6 M5 36
97.4 ZB 11 156.7 5A 25 241.8 M6 37
100.0 1Z 12 162.2 5B 26 250.3 M7 38
103.5 1A 13 167.9 6Z 27 254.1 OZ

Motorola differs from EIA with: XZ (L1), XA (L2), XB (L3),
YZ (L4), YB (L4A), ZA (L5). ICOMM does not use 97.4 and uses one
less than the amateur numbers above that (i.e. ICOM #25 = 162.2). |
Alinco and others add 159.8, 165.5, 171.3, 177.3, 183.5, 189.9, |
196.6, 199.5 to the standard set. |
Each frequency is approximately 1.035 times the prior one, |
with adjustments at 100 & 200 Hz. |

In their defense (what a hoot me defending the RatShack[SM]) at least two of
their older scanners (the Pro16 and Pro34) are desigend to run on 9V. A
common design voltage. (6*"AA"@1.5Veach gives you 9v). The wall wart is 10V
because they use isolation diodes in the power in jacks. IF will be hard to

find an off the shelf convert to convert 12.6V to 10V as they require at lest 3Volts. I have ran both of mine from the 9Vout and they only suffer a very slight loss of sensitivity in the high UHF, say starting at about 450MHz.
I have since modified my units to include low drop out regulators internally. Tight work and not for the faint hearted. By "low drop out" I mean that compared to the normal 3V minium between Vin and Vout these babies will function down to slightly less then 1V between Vin and Vout.
So unless you are really rying to get really weak signals from some distance away, just go with the standard 12@v to 9V converter.
YMWV!

As far as I know, only the radar detectors with the SWS thing pick up those signals. I don't have one of the SWS radar detectors, so I don't know if they work, or if the public safety people really use the system..

I do have a BCT12, and it picks up the mobile extender that's mounted in many State Police cars. It gives you an idea if there are any patrol cars in your vicinity. It does work.

As for the rest of the radio, it works in typical Bearcat fashion, and is good enough to have fun with. It's fairly limited, so if you want more capability like freq readout, other services besides police, news and weather, and your own bank of freqs, buy the larger BCT7. It is a great highway scanner. I like the size of the BCT12, and that's why I have one.

Boy, that's a bummer. I tried mine and sure enough, it skips from 807 to 819. I am sure, though, that I've heard cell images on it before, just not sure where. This radio has lots of potential, but I can't quite convince myself yet that I should sell my R2 and keep the VR500. The R2 has the audio and performance...

I don't know what it is in the U.S. and overseas, but in Canada, Radio
Shack's slogan is "You've Got Questions, We've Got Answers." Their
catalog is called "The Answer Book." Bet ya can have some fun with
that one! :)

Regards,
John

I also want one that can allow you to hear both VHF and the
800 meghz channels the same time.
The Pro-94 cannot do Trunk and Conventional at the same time.If you are
wanting to monitor Motorola then the 245 is the one.

There, you said it yourself. The Information is sold or given to strategic partners. Strategic partners obviously meaning parties that influence the financial gain of the company and/or supply the company with product. Would that be correct?
If so, then I suppose any party the information is sold to could then be considered a strategic partner.
Such a simple play on words from you. It seems obvious to me that you are employed by Tandy corporation in some way. Why don't you have the company lawyers post a few messages here. Perhaps they could write some mumbo-jumbo that none of us could decipher.

My apologies to the group for continuing this discussion, but I just couldn't sit by and ignore such an open admission. Enough said on the subject for me.

Message-ID: <822ivj$4e1$1@news.hawaii.edu>
Source record: 100802
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-federal-government license in the United States (over three million records). Many of the sources listed contain a subset of this data, although some contain all or nearly all of it. Federal government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscription services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

Another listing of FCC databases has been compiled by Rich Wells at:
http://www.strongsignals.net/htm/fccfrqdb.htm

----- WEB-SEARCHABLE DATABASES -----

You can search the FCC master for free from these web sites:

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

http://www.perconcorp.com/db_srch.htm

----- DOWNLOADABLE DATABASES -----

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. However, it is not being updated frequently.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See: http://www.wvsc.wvnet.edu/~fcc/index.html

----- PURCHASABLE DATA -----

BETTY BEARCAT

The Bearcat Radio Club sells FCC data in several forms. The Betty Bearcat series of regional directories covers US public service frequencies in 8 volumes. Also available is the Betty Bearcat CD-ROM that contains public service data for the entire US and a DOS-based database search program.

Betty Bearcat directories are $17 each, and the CD-ROM is $27. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), or http://www.bearcat1.com/scanners.htm.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the US Census Bureau at http://www.census.gov/cgi-bin/gazetteer/. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase used to cost $34 but is now being sold for $4 a copy while | supplies last! In addition, the newest version, Scannerbase XE, is | available for free download from CSP's web site. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MR. SCANNER

Mr. Scanner offers custom printouts of public service frequencies by county, or the entire FCC master for a city or town. Also available is public service data on floppy disk and a CD-ROM of all FCC data for the entire US. The floppy disks and CD-ROM come with a database search program.

County printouts are $4 each, and city printouts are $6 each. Floppies are $25 for the first state, and $10 for each additional state. The CD-ROM is $37. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), http://www.bearcat1.com/mrscan.htm (printouts), or http://www.bearcat1.com/menu09.htm (disks).

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

PRO DATA

Pro Data is a database manager program for license data. It does not come with its own data but can import data from APF, Percon, ScanWare, and UFDBF database files.

Pro Data costs $60. For more information, write to prodata1@gte.net, or visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543; call him at 630-554-3839 between 6-10 PM central time; or visit http://www.megsinet.com/~parnass.

APPENDIX

My mistake. After a little more testing, I find that the apparent effect of
the volume control was an artifact.

I was hit over the head and told I did not post the price correctly.
This was suppose to say $200.00 Or Best Offer.

That is what I get for doing things when I am half a sleep!

Sorry!

Sorry to put my two cents in, but I don't think there is any need to bite the guys head off - he's just trying to cover every area to get a good buy. If you want to check the newsgroups he has sent to, there are english speaking groups too and I think even most civilized people in European countries also speak English (I do know this as my dad is Dutch and his other daughter, who has lived in Holland for the past 35 years, speaks English as well as anyone I know). Just because there is a "nl" in the newsgroup name (which stands for Netherlands - not Dutch anyway) doesn't mean you can only post in a certain language or else how did you understand it anyway if you only speak Dutch?

Calm down!!
Richard.

PS. If you want to call someone an arsehole in english, learn how to spell it first or it just turns into a bit of a joke about yourself.

Don't trust the American press.

Deputy White House Counsel Vincent Foster was murdered by unknown parties and his murder has been covered up by known parties. The known parties are the powers that be in the public sector and the news media. Our document reveals, more than anything, how the cover-up was done, with the FBI, in all likelihood, in the lead role.

the proof is at FBIcover-up.com

Sorry you are having so much trouble explaining currency conversion to
a few of the U.S. residents participating in this thread. Having
worked a till in an Ontario border city and experiencied this
phenomena first-hand, I can assure you there are *some* Americans who
honestly don't know that other countries have their own currencies and
have never even *seen* Canadian money, much less understand how its
much lower value to the U.S. dollar contributes to higher CDN dollar
figures for most purchases in Canada. You may have saved them alot of
confusion (and yourself alot of headaches) by just posting your asking
price in U.S.$$ in the first place. After all, there are more of them
than us, and you'll go nuts trying to teach 'em all math yourself. :)

> affect the signal level of a discriminator tap. What radio are you using
> and where did you connect the tap point?

yep, you're right about that. I did the tap on a Uniden BC-235xlt TrunkTracker. As it turns out, the volume control setting has no effect on the tap output.

However, I have run into another problem. The discriminator tap on my PRO-2006 did not have a capacitor at the tap point. There is a 5 mfd tantalum capacitor (actually a pair of 10s in series) on the BC-235 tap. I find that Trunker works perfectly on the '235, but WinFLEX only works well on some signals. It appears not to be getting enough signal for others. Is there some sort of adjustment that I can make to improve the performance?

>RadioShack's business was built almost exclusively on repeat business over the years.

The same could be said of ANY business. One of the few useful results
of many years of market research is the fact that the most likely
person to purchase your product is someone who has purchased it in the
past (source: the NOVA episode on the collection of marketing data on
consumers entitled "We Know Where You Live").

RS is simply taking advantage of this phenomenon.

>Over 85-90% of RadioShack's customers do not have any problem in giving
>their name and address.

What is your basis for this statement? When I worked for Radio Shaft
as a college undergrad, my TRUE name + address percentage (i.e. those
that I didn't make up ;-) were more like 60% - 70%, and of those at
least 50% gave a name and address only grudgingly (i.e. to avoid the
"confrontation" of having to say "no" to someone). Women especially
are especially reticent to say "no." Tandy, of course, knows this
fact of human psychology - that's why they make their clerks ASK you
for the information rather than providing little cards at the checkout
counter which interested customers can fill out and drop into a box.

To say that 85% of Radio Shaft's customers do not have any problem
giving their name and address is just flat out wrong. If you count
only those people who actually WANT to receive Radio Shaft's junk
mail, it's more like 25% or less.

Then maybe you should open your eyes and look again. There most certainly is
a functioning live Houston PD link on that page.

Apology accepted.

Get a *FREE* Program that works off your computer....scanner gets
active...makes wav file or mp3.

all for free...!

If you dont have the codec for mp3 , just record the nights scanner
activity , and make the 50 meg wav file into a MP3...

I arhive all Police xmissions....seeing as thier Digital system (DVP
) is dead !....yep...they abandon it , due to pubic..political..and
simply it sucked for the officers who , and I quote " We cant hear a
darn thing , all traffic is muffled "

" Now that were in the clear, I havent said 10 -9 in months "

With budget cuts , they wont be fixing nor replacing any gear...we
voiced our opinions at a city council meeting...MANY are so unaware
that they are toys...like a PC we said...if its digital..Budget LOTS a
year...your going to be spending plenty on programming...upgrades!

A leaked Police Budget helped in our quest....$387,000 on just
maintaince !

The public didnt know this nor did the Council ....they were
shocked..well not really , they got caught with thier pants down , the
document was hacked out of thier own City systems (grin) and made
public...so we loose a day care cuz it costs 400,000 / yr...but can
have a dvp system for 8,000 ppl....one frq...39% are over 55 yr of
age....Hmmm....now were back to hearing those racist comments....rude
remarks about ppl...Ohh they never went dvp again.

Sorry for the off topic rant...thought just hit me...perhaps many of
you , are like us here...dont give up....find ways to MAKE em use
clear comms....The leaked or hacked budget caught em off guard....so
no $$ for any new toys....the 387,000 / yr for maintaince is not any
new gear...they have such a lame system...(VHF) that if the batts go
low...the KEY is lost...as holds true for the mobiles...we spent over
4 million on this now junked system.....Our mayor said " We have no
plans to upgrade a system that is 4 yrs old, that we were assured
needed no more $$, we will not spend on the PD (Radios) anytime
soon, if not never! " Unquote.

Be all that as it may, Tandy AKA the RatShack{SM} is the ONLY business
that has ever refused to sell me an non controlled item (like codine cough
surup or an AK47) that I wanted to pay for with CASH. You know what CASH is
don't you?
The little peices of paper that are legal tender for all debts public and

private in the good old USA.
And inspite of anyones claims, I have received mis-IDed junk mail that had to come from the RatShack name and address files. By this I refer to a simple, but unlikley mistake I made years ago when I gave them the some garbled information by accident. Now maybe the store manager was selling or giving away the data, or maybe some one broke into the store or their data bank, but regardless of how or why, I did receive the mismarked junk mail.
Please fell free to give up any and all expectation of privacy, but do not expect everyone else to follow your lead.
Some day this not so great republic may well have a none cash based economic system, where all "money" is electronic and at that point all transactions will be recorded and availible to the "right" people. But I sure hope that sad day never arrives.
Tandy does not need to know my name and I do not want them to have a record of just what radios I purchased from them.
Perhaps as I am too old fashoned in my outlook.

5060. Radio Shucks...the "we cannot think" on eternal enemas. Why them? Why does it Live?

Newsgroup: rec.radio.scanner
Date: 1999-12-01 00:00:00 UTC
From: 20intothefuture <upupokok@email.msn.com>
Message-ID: <uT9qL1DP$GA.267@cpmsnbbsa05>
Source record: 100833

Today I called several RS stores and inquired as to the
availability of the
RS 2052.

One store said "yes, come on down"...so I went into oakland and
stopped
off on Park Blvd and asked. "oh no, we don't have them in
yet"...and then in
a quip: "but go to this store, they have them"

So I get directed to San Leandro Bay Fair store.

Let me give you this info first: I called their 800 number and
wanted to buy
the 2052 from them so I would not have to set footsies in a RS
store and go
though their boring procedure to buy with Credit Card. More on
that later.

Their 800 number call was answered about 8 minutes later. then
i asked to
order a product and she says: "what is the catalogue number?"
Well, seeing as how i only had model number in hand, I said" "gee,
the model
number is 2052 and it's a base model and it's brand new and was
supposed to
be for sale last month".... "oh ": she quips.

Well, she says it again" do you have the catalogue number"?

I hang up, get it , call back and get another voice.

same ditto spiel. then he says: "I am sorry, but you cannot buy
that model
over the phone by Credit Card. You must buy it at a store. "
What.

YES. you have to buy it at a store. I told the HIM that the
stores did not have any models in. That was too bad. he says. You will
have to go to store and order it there.

Bringing things into focus: we are back to today.

i walk in to Bay FAir Mall RS. in San Leandro. i talk with the
droid who spoke with me on phone and asked him to bring me one. he goes
into the back cubicle and brings to me a portable TT of same genre .

Remember: i asked him if theyhad the 2052 model in and he said they hvae plenty. Upon that i went 8 miles out of my way to get my very own base model.

I told him": no, i want the base model. " he goes to catalog and then to back
cubicle and after pulling his zipper up as he approached me says" ok, base model. "

I look at it and say" this is not it. This is model number 2050. See, here it says that this is not the right model which you claim you have plenty of for me."

back to catalogue. goes to computer and scrolls his balls on and finally comes
up with: " we don't have any in stock anywhere in this region".

But you said you had plenty of them.

he then tries to get his sup on phone and asks how I can get one and she says to order it and they will ship it. But i tell him that i wanted to order it on phone using their 800 number and they refused me a sale of. So how come you can get them to send me what they will not send me when i call them to send it to me. ?

he's stupified. he's off-center. well, give me info and i'll have it shipped. Not
wanting to go to more stores i began to give him my life history for him to put
into file ... he gets them. Then he asks me my address adn phone number all over again, and i tell him "you already asked that question and that next one and next one"
why do i have to give it to you over again. "he made a mistake."

i am getting pissed. he then puts info in and yells over to the other two buffoon
droids, who were deciding to had the best pair of buns, " say, is the credit card line still down or what? " So the female goes into back cubicle , does her duty and then yells out at him "it's still nto working" won't be for 27 minutes.

"you mean I have to wait 27 minutes to make a purchase" at this store
for this product which you now tell me is not in this region prior to you told
me you had plenty of" ..... is that right

before he could tinkle-poo I just said to him: maybe it's best I leave this store
now. I will not wait for this to upset me"

I left.

"have a nice day" is his reply.

is this Radio Shack at its best?

Refusing to sell me what I want to buy from them on the phone and telling me
I have to buy it at a store who does not have it and then to be told to wait for
27 minutes before I can place my order over the phone at RS store whereas
placing same order over the 800 order number they refuse to do.

is this making customers happy or what? is this just making true what all
who have taken RS to task just another dismal place to waste your time and
get upset because they have it and yet when you come to get it they don't
know where it is which they told you they have plenty of.

but no where in this district of Calif do stores have them according to the
computer terminal they get their "charge" from.

Model 52 is the new TT with all those goodies and 1000 channels and sells
for 320 or so. 2052 model number; I forget the catalogue number. this i'll
let RS droids find. It seems to be their height of full achievement in their
work-place for which they get paid minimum "stuck-here" money.

Walking into RS is like forgetting that people actually exist not knowing just
how expert RS droids are at "you have questions, we have what we don't have any
more"....but to get you into the store...we have plenty. "

RS...they seem not to want people to come back the way they don't train the
embryo's who they instill in their stores. That's why they keep going into that cubicle
at RS.

bill conduit
etc

Why don't you kill a lot of birds with one stone hand have it
speak the ICOM CI-V protocol to their receivers? Better yet,
use the Opto enhanced version, CI-5. That'll cover a lot of
radios...

>
>Thanks.
If you want to use ni-mh, you probably need an external charger.A NiCd
can be 'dumb charged'. Just keep the charging current below C/10, and
you can charge it for months before you will do any damage. Try that
with a NiMh or Li battery, and it's toast in a couple days.

There are Panasonics NiCd's that are good for 1100mah, the thing you
have to keep in mind is the Yupi charger puts out 45-50ma, so the
charge time for the high capacity NiCd's with the bulit in is
probably 30 hours or so rather than 12-14

Sorry for the confusion. For the reasons following, I was only looking at a purchase in Canada. If you know of a store in Canada that is selling for $300 plus tax, then please let me know.

I am well aware of the many places in the US that sell scanners (the lowest I have found is $199USD) but even if we forget about all the hassles with getting it across the border, what happens if it ever needs service?

I like to buy anything that is likely to need service from a real store.

You may also not know that shipping and customs paperwork can add an additional $50CDN to $75CDN quite easily. The other factor is the 15% tax I would have to pay. So far, I know for sure that I have $199USD * 1.4927 (current exchange rate) = $297.05CDN * 1.15 (for GST and PST) = $341.61. When I add in the possible shipping etc, I get a final price of at least $390CDN. Since the seller was paying the shipping, There is a clear $90CDN savings or 23%.

I am confident of the shipping costs, since I do order stuff from the US that is not available in Canada fairly often.

The only way to beat the high cost of importing is to use the US and Canadian postal service. I have done this often, and have never paid more than $5CDN for import costs (plus applicable taxes of course). The shipper pays a small amount also, generally in the $5.00USD range.

I hope this clarifies my position.

Regards,
Ron

Most of the data slicers have a 100K resistor to ground at the input. With a 100K input impedance, a 1uF capacitor will yield low frequency response down to 1.6 Hz which is well beyond what is needed. Larger caps are not necessary and just take a longer time to charge up to steady state when the radio is turned on. The series pair of 10uF you have should work and the capacitance value is certainly not at all critical.

From: Greg Davis <gdavis9999@my-deja.com>
Message-ID: <82223dgas1@nnrp1.deja.com>
Source record: 100882

I have used many other 6-cell scanners with AA rechargables (6x1.2=9.6V) and have always used a direct 12V connection to the car cig lighter with a dropping resistor in line (not sure of value, it varies from model to model). Of course RS wants you to use their own adapter which is a large switchable type set to 10V.

Question: has anyone successfully made a 12V adapter for car use to charge/power the Pro-92 using a direct connection, and if so, what resistor value (resistance and pwr rating) did you use? I suppose this could also be calcuated based on the 13.6-10V=3.6V drop needed across the resistor at max current draw (lowest battery condition with unit on and loud volume level) R = V/I. Thanks, Greg

Being of the "old school" I have never owned a Trunk Tracking scanner before but today I went out and bought the PRO-94.

I read and re-read the manual and am just fed up with trying to figure this out. Perhaps this is not what I had in mind.

1) How do I program which trunked system talkgroups I want to hear (Motorola Type II)? I sure don't want them all!

2) What the heck is a "fleet map" versus a talkgroup, and why should I care what the "fleet map" is. Nobody I know ever mentioned anything except talk groups before, none of this "fleet map" business.

Help! Thanks!

Buy in a heartbeat? A used scanner that could have been dicked with versus a new 245 (at $209). For that matter a used 245 for $150.

Hmmmmmmmm thats kinda steep considering you can get the 245 from
$200-$250 in most places,,,,,

5082. Uniden SC200: First Impressions

Newsgroup: rec.radio.scanner
Date: 1999-12-02 00:00:00 UTC
From: "Michael J. White" <mike.white@erols.com>
Message-ID: <827hq5ksr1@autumn.news.rcn.net>
Source record: 100643

I just got a new Uniden SC200. I bought it by phone from Communications Electronics Inc (CEI, http://www.usascan.com/). Service on the phone was brisk but efficient, the scanner arrived earlier than promised in perfect condtion, and was a brand new factory pack. Their price was $183, and shipping was a pricey $19, but they ship by FedEx. CEI promises a 61 day "satisfaction" guarentee, with no restocking fee; that was a strong incentive to buy it there. (I have no connection with CEI, just a satisfied customer).

I knew going in that I would not like the looks of the scanner. It just looks kind of hokey with that blue bezel and sort of "owl eye" look to the buttons. However, I have to admit that it kind of grows on you; It's a little bit cuddley.

The manual is clear but not exhaustive. There were several paragraphs I had to read a few times to get things to work right. The manual covers "SmartScan" downloads (see below) and cloning, but makes no reference to PC control. However, I've seen posts from folks to say they're real close to having freq management sw ready. I'm waiting, guys... !

The scanner has a nice quality feel to it; nicely made and sturdy feeling. The buttons are the usual rubber jobs, but seem to work ok. The only real disappointment is that the scanner runs of a dedicated nicad pack, not AA batteries (charger is included). I think this is a drawback, but probably a minor one. The nicad pack looks just like those in a cordless phone. One advantage of the nicads is that the scanner is pretty light. The external power/charger jack is a small coaxial number, and needs 12 vdc, so you could get or make a cigarette lighter plug setup for your car.

In on-air tests in the VHF band, the SC200 performed not quite as well as my Icom RC-10, but almost. I'll have detailed sensitivity figures by the weekend, but it seems to hear quite well, at least in that band. Audio is not hi-fi, but seems adequate.

The controls are very logical, and work very well. The alpha tags are implemented especially well. You select alpha or numeric mode with a "Display" button, and you can do this on the fly as it scans, although it doesn't show the tag until the scanning stops on a busy channel. When stopped or in manual mode, you can toggle between numeric and alpha mode by pressing the "Display" button. You can't name banks, however. One big plus is a "VFO" mode; you can enter a freq and tune around with the knob without storing the freq in a memory. Very nice feature. It also has the usual search functions (preprogrammed or you enter the limits) which works fine.

I tried the "Smartscan" deal where you download freqs from their server (a nice rs-232 cable is included). I had to surf around to find the software

that lets you use the internal modem in your pc (couldn't find it on the Uniden site; they don't even list the SC200 yet), but I did find it and it worked fine on the very first try. It took about 3 minutes to download around 120 channels for my area. The download includes alpha tags which were fairly logical. It all went very smoothly.

Unlike my R10, cloning requires a second unit. That is, if you try to clone without a second unit connected, it generates an error. It's obviously looking for some sort of handshake from the receiving unit. My R10 happily zaps out its data whether there's another radio there or not. All the bits just spill out on the floor.

Overall I'm quite pleased with the SC200; I think it's a keeper.

Things I like:
Ease of use; most things work just the way I want them to
PC control (folks say 3rd party freq management software is comming "real soon now")
Alpha tags that work very well. At last I know what I'm listening to!
Reasonable receiver performance
Nice backlight
Nice quality feel, light weight

Things I don't like:
"Owl Eye" decor, blue bezel (just a matter of taste)(having said that, it looks a lot better in real life than the picture on the CEI web page; real bad picture there)(also, I have to admit that it grows on you :-)
Nicads (I'd much rather have AAs)
Can't assign alpha tags to banks
No PC software. There's just no excuse for not providing this. Come on, Uniden, who do you think you're kidding??? Just pop a floppy in the box, and you've got a runaway winner on your hands!!!!

So, those are my first impressions; your milage may vary.

Thanks to Rich "Strong Signals" Wells for his recommendation to try this nifty little scanner, and for his terrific scanning web site (http://www.strongsignals.net).

Happy scanning!

Mike

Oh no. Wells speaks. he finds words that don't fit and
refuses to accede what was written as a "intro"

Oh yes, Wells makes a statement: but out of whack.
he's trying so hard to put the onus on another track.

Wells, you really are a great artist with the WWW keys
your work on this viewing machine has nothing as sleeze
But you really walk on shit as you try to make someone wrong
you really need to see what you read and keep it that strong.

You missed that part so amply written
"i asked if it was in stock, catalogue number given
was told by two they were there in numbers
to come on down, when i did, i was smitten.

he brings me a 2050 model as the one wanted
i tell him it's a no-no
forever his gene-splicer I hope is haunted.

you see the pic: I called ahead of time to ask for more
did they have the new 2052 in their R-Stunk Store
yes, came the reply, times the guy echoing in the back
come on down and see it in all it's glory at Radio Shack

Again, Wells seems to hit and miss
you really got to read the message as it is
your ass no one for that will they want to kiss.

> More RadioShack bashing from someone who clearly allowed
> themself to be bashed by RadioShack. With all the horror
> stories that show up on USENET on a weekly basis, you
> still walked right into it. Amazing.
>
> Strong Signals,
> Rich Wells N2MCA
> http://www.strongsignals.net/

Wells, stick with what you do best
leave reality to the makers of a premise
for which you will not easily pass this test.
You went beyond your grasp of things so real
it was right there, to read, as cards we deal

amazing...you say in guffaw or worse
well, upon your curds and waves a plethora of "ick-it"
curse.

Hmm, people don't understand 'legal tender'.

The phrase on the money, I was told, was because when the fed started issuing money, it had to enforce it's usability over state and even local and private issued money.

And what is 'legal tender'? Well, there's a limit! In fact, once you reach so many coin, it's not technically legal tender. So the stories you hear of someone paying something with 10,000 pennies are probably BS Urban legend. In fact, some banks won't take bulk coin without either charging you to sort and count it, or forcing you to count and sort it first.

As to 'all debts', that brings up an interesting point. If you try to pay for gas late at night with a $100 bill for example, the guy does NOT have to pump it if he doesn't want to accept it. BUT, if you pump first, now it's a debt, and he HAS to accept any legal bill for the debt. BUT!!! He doesn't have to give you change!

As to the ID and name and address at RS, if you don't want to give it, DON'T GIVE IT!! Are people IDIOTS that they loose their backbone and give in??? Me? I WANT those periodic 10% or more discounts they mail me, and the rare 20% of sale slip certificate!!

As to credit cards, that's a thorney issue. Whether they can ask for address is open for discussion, but they CANNOT ASK FOR ID!! That violates a number of cardhold agreements. In fact, AMEX specifically touts as a customer benefit you can loose all your ID, call AMEX, and get a replacement card that works just fine anywhere AMEX is accepted WITHOUT waiting for your other ID to be replaced. AMEX acutally WILL come down on any business that hassles a customer over this. BUT!!! If you ever present an AMEX card that is UNSIGNED, then that's a whole other ball game!

Writing a check? They can ask for all the ID they want, and keep saying "Sorry, no, got something else?" untill they see something they like, but in some states, if they 'ask' for a credit card, you can nail them. If they ever write the number down from a credit card to take a check, SCREAM BLOODY MURDER!!! And threaten to sue the bastards!!!! And the credit card company will probably help you with that!

A side note, there was just a case at a major store where an employee was 'swiping' cards. Turned out she had a 'Palm Pilot' under the counter, and every card she got ahold of, she was swiping and storing the data. It came to light when a customer saw her swipe his card once through the register, and again through a second reader. He asked, and she didn't give an answer he liked, so he made a scene until the manager arrived. I heard she was arrested and the Palm Pilot was seized just full of numbers!

Jim ole buddy, you have a problem. See, Pasco County uses a GE/Edacs radio system and your 895XLT will only TrunkTrack on Motorola systems. The bottom line, boy, is that you CAN'T track the Pasco County system with your brand spanking new radio. That's why it can't find the control channel. It's the wrong radio! Ain't that a kick in the head?

What services are on this trunked system? Any chance that the FD has moved off of 33.94? Every summer they come in loud and clear up here in Connecticut... so loud in fact that they overpower the local traffic.

And just how does this apply to a scanner group?
Aside from having a manual tunner, and being nearly deaf (compared to
anything but a kiddy 49MHz HT) and using such odd ball batteries(althought
the magnesium shells can be fun for the pyros) why would anyone want one?
WB FM 30 to 7? MHz is so usefull.....Great fo messing up the lower VHF
TV channels.

> When they say it's in stock its IN STOCK!

Well when I was working in chicago last year I had a chance to go to
the
RS store on Michigan Avenue. Went in. The manager spoke with me
and
being that i was to be in chicago a few months bought the Street
Pilot. The
guy knew his stuff and I was impressed with his openness and his
desire to
make me happy.
Well, the job only lasted a week. So I told him I wanted to cancel.
But it had
already been processed and would be delivered to the location I was
staying at.
But he put in the cease order and said as soon as they get the GPS
back they
would credit me. Well, i left chicago. the package was forwarded
by UPS and
out to Calif. by the time it got here it was close to 30 days. But
the cease order
had already been entered into the database.

So i take the product to a local R-Shunt store and ask for my
refund.

Well, reality was back. Chicago this was not. The bumbo-dumbo was
as smart
as the slogan" you have questions....we say "DUH".

he assumed an attitude. "we cannot give you a refund because you
did not follow policy." you did not return it in chicago." Here we go
again.

Well, I had him call 800 and talk to a human-think.

They told him to process the refund. They also told him that
once that order to refund was in it was to be processed upon presentation of
item. Did not say how long or when.

still had the attitude from him. Like he was "working on his
time to write the order up and I was keeping him from going back into the
cubicle to ...jerk-off"

but the guy in Chicago was ok. I guess it must be Chicagoans in
general.
Had a real nice time there with people. Even the cops were nice in
a sort of
'expected way" once they found out I was from Calif. They just
laughed when I
wanted service. Like "no beeg ting brah"....

bill conduit
as i see it

The old Realistic PRO-5 portable covers 450 - 470 MHz.
It employs double conversion, with 10.7 and 0.455 MHz IFs.

If one or more of the LEDs don't light, it may be due
to bad channel selector switches, a bad IC-2 (74L73 counter),
or blown IC-1, a 74L03 quad 2 input nand gate.
IC-1 is used to pull the LEDs' cathodes to ground.

Servicing data for the PRO-5 is contained in Volume SD-9
of the Sams book entitled "Scanner-Monitor Servicing Data."
It was published by Howard Sams Publishing division of
Prentice-Hall at (800)428-7267,
http://www.hwsams.com/sams_model_new.html

Crystals? Order them through Radio Shack.

Good luck.

Actually, like it or not, the ARRL is the only organization trying to promote
radio that the Feds WILL listen to, with any amount of decent consideration.
Everyone else the Feds listen to, as regards radio, are self-serving
commercial industry lobbyists...
If more people joined the ARRL they could effect some change rather than leave
it and let them dry up and blow away.
Mike

>above 900 MHz.

These aren't images if the scanner employs a high 1st IF,
as in the VR-500.

They are IMD (intermod) products, usually 3rd order.
Two or more 800 MHz transmitters transmitting
simultaneously overload the scanner's mixer and produce
signals on other frequencies in (and near) the 800 MHz band.
The ARRL Handbook has some good explanations.

Can happen to any scanner, though to differing degrees.

It's difficult (read expensive) to produce a steep skirt filter
to notch out 869 - 894 MHz without degrading sensitivity on
adjacent frequencies.

The first mixer stage needs to be "stiffer" instead.

Hello everyone I know someone out there can help me. I want to purchase a new scanner and I am stuck deciding upon these three scanners. One I am looking at is the Alinco DJ-X10T,also Icom R2,and the Icom R-10. If anyone has any experience with any of these radios can you please e-mail me and let me know. Or if you suggest something else. Please let me know Thanks in advance..

> > released yet

Oh, did I forget to tell you the best part.

I guess i did on purpose....I complained to RS in their
sanctuary
where the 800 order number is located. Oh jes. Nice people.

She apologized and said they would send me one and ild have it
Friday. No kidding.

kid you knot. she actually agreed to ship it to me and i will
get it Friday.
That is tomorrow.

It's out. it is now enroute.

PREMISE: go to RS for their catalogue and never go back again
and
shop 800. Eliminates the aggravation of going out of your way
to find
that what they told you on the phone they have they actually
have no idea
of what they have.

Now you can speak with people who have answers, minus the boring
insipidness instilled in the people who come out of that
cubicle.

bill conduit

Actually... The leage was not very conducive to the average person
for a long time. But the only way to get things to change is to be a
member so you have a RIGHT to bitch. And the league HAS come
around. They weren't the initial impetus for no-code or novice
enhancement. In my opinion, that was all the result of the original
efforts by the QCWA. Yep, the old farts! Soon I'll be proud to be
a member there. The league 'came on board' once the ball was
rolling.

As to this resturcturing... Well, again, the league seemed officially
quiet until NCI was getting ready with their proposal, then the FCC
made some noise, and everybody seemed to panic to get 'something'
out. Prior to that, while the league was 'quiet', from the trenches
there was a perceived attitude of 'status quo'.

So give the league credit, they are 'waking up', and it is unnerving
some,
and making some radical suggestions. But just remember that it was
originally the league, I believe someone named DeSoto, who originally
proposed 12 and 1/2 WPM CW as a requirement to officially "Limit
the number of HAMs" back in the 1930's. The FCC didn't like the
1/2, so they made it 13WPM, and we've had it in one form or another
ever since. And yes, it was OFFICIALLY to "limit the number of
operators". But don't shoot the current league management just yet.

Let's see what comes out of the latest firestorm.

As to the suggestion to drop league membership for not supporting the 'status quo' on CW? Does anyone think the league wants to wither and die? Seriously, they are going to go where they can be alive and be a viable influence in the future, and that sure ain't gonna be the "CW or die" crowd once things change.

You sound like another guy painting himself as a victim. Neither the
ARRL nor the FCC is guilty of "discrimination" against those who have
not passed the code. They've obtained amateur radio licenses with
certain privileges. If you wanted to expand those privileges, the same
avenues open to others are open to you.

73 and I already enjoy good DXing,

The PRO-51 is a good scanner and I use mine as much as any
of my other scanners. I especially like the Limit Search feature.
The worst thing about the PRO-51 is the long squelch tail but there is
a mod to eleminate that if you can't get used to it. The Owner's
Manual (20-308) should still be available through RS if you don't have
one or you can probably still read it on online at RS's web site. A
scanner is never really outdated if it will do what you want it to do.

Forgive me, but since I don't know you and since I'm a skeptical individual by nature, I'll believe it when I receive an issue of QST and a membership card and all that other stuff they talk about when they send you their new ham package shortly after you get a license. But assuming for the moment that you actually did this...WHY? So that I'd have a membership to cancel? Please explain.

>Dork. The League was instrumental in creating the no-code tech license.

As I recall, ARRL was dragged kicking and screaming into the no-code Tech era by the FCC, following the loss of part of the 1.25 meter band due to underutilization and after the FCC flat out told ARRL that since it had opposed the Communicator Class license in the 1970's and since the bands above 30 Mhz were underutilized partially as a result of ARRL's stubborn resistance to no-code licensing, that the Commission could no longer guarantee the continuance of ARS allocations in VHF/UHF. The only way ARRL was instrumental in creating the no-code Tech license is that their previous opposition to no-code licensing set the stage for the loss of part of 1.25m to the ARS - a loss which served as a wake-up kick in the pants to the community. Without ARRL opposition, we'd have had no-code licensing some 15 years sooner, and we might still have all of the original 1.25m band, too.

>Jeff KH6O

Well, here we may have a common interest, OM. Do you still listen to CG comms? I've been an SWL for some 33 years. I have a receiver here that's parked on one USCG frequency or another all the time, usually one of the safety of flight frequencies, but sometimes on 2182.0 or on one of the SCN frequencies. CAMSLANT's signal is impossible to NOT hear here when they're on the air, and I hear the aircraft CAMSLANT is talking to more often than not, but it's not at all unusual for me to hear CAMSPAC and aircraft working CAMSPAC. I've also logged CommSta Kodiak a few times, and also caught Group Honolulu on HF at least once that I can recall. So those CG signals from the Pacific area do make it up here to the northeastern U.S. fairly regularly. Depending on how long it's been since you were at Point Reyes and/or Honolulu, who knows, I might even have heard you on HF in that capacity?

I've also logged some cutters - probably less than a dozen, though if I went through my logs and counted them I might surprise myself - but I'm pretty sure all of those were in the Atlantic when I caught 'em. A few that come to mind because I logged them more recently are Monomoy, Spencer, Hammerhead, Legare, Point Batan. Then there's GANTSEC and countless stations working antidrug interdictions on the "secure" channels and on the DEA/Customs COTHEN freqs, which I can't really identify properly from their trigraph tactical callsigns, but which I know are CG assets because I'll also here them on 5696 or 3E11 working CAMSLANT or GANTSEC. Then there are countless fixed-wing aircraft and helos. One helo from CGAS Cape Cod I have even logged on four bands - on HF talking to CAMSLANT, on VHF-FM talking to Group Buffalo, on UHF talking to another helo, and on the civilian aircraft band talking to the tower at Niagara Falls IAP. And various other Group stations, including Group Buffalo, have also been heard on HF here, the most recent being Group Miami earlier this week. So, I found it interesting to see the CG callsigns in your signature lines.

73 and good DX'ing,

Sorry, I should have been a little more clear on this issue. What I meant by US legal is that it cannot be a scanner that receives cellular (ie: AOR AR8000, AOR AR 8200. The US versions of these radios have a B after the model number to indicate that it is cellular blocked.). While it is not illegal to own a scanner that receives cellular (otherwise a lot of people who have older scanners would be breaking the law), it is illegal in import a cellular capable scanner into the US.

Again, I am sorry that I wasn't very clear on that issue.

5121. Os456 lite retrofit board

Newsgroup: rec.radio.scanner
Date: 1999-12-02 00:00:00 UTC
From: Mike Burch <libertybell7@home.com>
Message-ID: <3846EE59.B3CDEC45@home.com>
Source record: 100727

Ok, before I get my ass flamed off I fully admit that I did not do my homework or the necessary research before purchasing this board and take full responsibility for my total stupidly. < disclaimer :-). I have found out regretfully that the os456 lite (and they aren't kidding around about the "lite" part) does not provide signal strength measurements which eliminates a good chunk of Scan*Star's features. You may know this, I did not. Evidently... But for those of you who don't.....
Hmmm... Why would they eliminate all the really great features from such a nice product and make it a marginally useful piece shit. Retrothought..... Its because they have their own receiver now that provides all these features and they will then steer scanner sales in their direction by eliminating all the mind boggling DTMF, Signal strength, CTCSS data that most of us cannot possibly understand or use on the original os456. The os456lite is worthless.. save your money and let optoelectronics eat the stock. The os456 lite board will come in really handy if I make it to 108 years old and am totally senile with an over burdened urine bag and the only partially functioning sense is my hearing but have a fully functioning fore finger. Don' buy this piece of junk.

Just my opinions fella's , maybe some of you find this to be a great product but I surely don't. I am not going to return it or complain to them. It is my fault for not researching it enough.

Best wishes... Save your money..

Mike Burch K8MB

They claimed it was a result of not being able to get the silicon they needed... I don't know if it's true or not. They still make the "heavy" version of the OS535 with all of the features that are lacking in the OS456 "lite" version, so it certainly sounds plausible to me. You also have to believe that sales of the OS456 must have fallen quite a bit in recent years, so I guess that it would hardly seem worthwhile to redesign and manufacture a more capable version for a scanner that is no longer being made.

Anyway, go find yourself a used PRO2035/2042 with an Opto in it. They're really the scanners to get if you want computer control!

Hi there,
I am selling a "NEW" condition Bearcat UBC-3000,400 channel hand held scanner this is the European version that recieves the FULL 800 Mhz band,
I have had the radio for about 6 months and have not used it ("I have taken it out of the box to look at it but then put it back in the box and haven't touched it since!")
Its a great radio but I have tooooo many radios and am wanting to purchase a new ham radio.I paid around $300 for it 6 months ago and am willing to sell it for $250 shipped to your door,I will cover shipping cod charge and insurance!
Please e-mail me if you are interested.
Thanks-Russ

Actually Dave, notice the silence coming from the NCI group? Amazing, a non member criticizing an organzation that he is not part of. I did that and the Bod attacked me at every turn. That NoCode Double standard again. Just wait, I am sure the NCI mouthpiece from MI will chime in any time now. Funny how it was not OK for me to discuss NCI policies while a non member but it's OK for a non ARRL member to have his say. Just shows that NCI is not what they profess as in ARRL.

just keeps on getting better and better

BTW, he sounds more like that Ploude guy than anything else. The two of them must share a common brain. Too bad, the batteries in it are so low.

The reason for the "lite" version is because components used on the original boards for tone decoding etc.. are not available anymore.

Hence, a "lite" version for just basic computer control.

It's really to bad, I have one of the originals and it's a great board.

Ok, so there are a number of choices with much better image rejection.
I didn't know that.

I do know that non-existent image rejection is common in amateur radios
that also happen to have 800/900 MHz coverage, but didn't know whether
this was also common in scanners.

How about the R2? Does it have adequate image rejection for cellular
images, or was it just certified long enough ago that it didn't have
to pass the same standards?

Check with RS national parts. They used to sell 'em - the ones
from all the GRE scanners (up to and including the PRO-92) should work.
Never hurts to have a couple backup clips handy in any event. The folks
at the local store won't even know what you are talking about -
hopefully, someone here will be able to supply the correct part number.

Your PRO-2006 really should have a capacitor to couple to the slicer. Otherwise you will load the discriminator at DC and disturb its operating point. This could cause a rise in distortion on received signals. If the impedance of the slicer is high enough you may not notice the effect or maybe only on heavily modulated signals.

Regarding the 235, I have read that the signal level from the discriminator is rather low and you may need to adjust the gain and/or hysteresis of the circuit to suit the lower signal level. I will e-mail you direct so we can take this off line since I'll need a copy of the slicer schematic to go any further on recommendations.

Message-ID: <824ep2$82m$1@nnrp1.deja.com>
Source record: 100758

Press <trunk> while the channel is active (in scan or manual mode)
with the PL you desire. Or switch to the program mode and press <step>
until 127.3 is displayed. Remember, you must set the channel to PL
before selecting which PL, but if you see the PL being decoded then you
have already done this.
Also remember that the channel will not be squelched to this PL
unless you are in "closed" mode for that particular bank. Toggle the
open/closed status with <function> and "2" while stopped on a channel in
that bank (in scan or manual, or maybe program mode).

Tandy Corp. (RadioShack) in their new alliance with microsoft announced
at their shareholder meeting that they will share all resources,
including customer databases and marketing information with Microsoft.

So now Bill Gates will have your name and address. And will know you
keep buying the makings for cable de-scramblers and tone dialers. He
will sell this information to the US government, in exchange for
dropping all monopoly charges against Microsoft. And you and
Ted "small shack" Kaszinsky (sp?) will be locked up in a Fed pen.

Seriously though, i think the benefits out-way the negatives.
My 2 cents: i dont think they sell the info.

For Sale: Motorola Saber I Secure - VHF w/Accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=207518634

Model #- H99QX052A
Factory ID - H43YXN7139CN

12 channels
6 watt output
146-174Mhz
SECURENET-S capable
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
VERY Good High-Capacity Battery (W&W Brand I believe)
Antenna
Remote Speaker/Mic - Model NTN6128C
Belt Clip
D-Ring Clip w/Belt Swivel Attachment

This unit is in excellent shape (but has some small surface scratches on front). It is guaranteed to be in 100% working condition. All included accessories (except battery) are genuine Motorola parts and all are in perfect condition. Selling because it is not needed anymore. Reserve price is VERY reasonable. Please email with any questions. Good luck, and thanks for looking!

HERE IS THE BEST THING ABOUT THE RADIO CRACK!

I love how EVERY time I go in there to buy something the only one available is the Floor Model? The one that thousands of fat slob ambulance chasers have swiped their gressy hands on! The one that the buttons are already worn down, the one that has been playing in the store at Full Volume for the last 3 years and the speaker now sounds like Shi*.

I bought 2 scanners there in my lifetime and that was all I could find out of 30 plus stores in the Chicagoland area, Display models. What happened to DEMO pricing? Every other company does this? It's like your buying used gear I f*****ing hate that. If I want to buy used gear I'll buy it on the newsgroup and save $80 in the process.

The last time I bought a Pro 91 0r 92 whatever doesn't matter I called and asked "how many do you have in stock?" The guy says 3 and I run there. I'm in the store 4 min after I called him. I tell him I called on the scanner and he grabs the one on the shelf and says "let me get the box?" I said "WHAT, NO I want a "new" radio" Oh well then I have to go to the back and look for that Sir, he replies! I said ya go do that and he comes back dangling the display model in my face and says "ummm last one take it or leave it" I went off on the manager and 2 mins later he comes out w/ 3 brand new ones! I had to open them of course seeing as Radio Shack will take back ANYTHING and just resell you some broken radio that was returned by someone.

I learned that I will never go to radio CRACK again. Their scanner SUX anyway I sold that Trunktracker it was the deafest radio I have ever owned.

>Do you have any other local places to buy scanners other than Radio Shack?
>

I buy everything via phone/WWW now. It is much better and the folks know their business. I've gone through Universal Radio 3 times and AES 3 times. I no longer give Radio Crack my business. If someone buys something at those places and returns it then it is sold to me as a "DEMO" and I save 10-15% and they check it out to make sure it is like NEW!

Locality means zip because I usaully have to go to 3-5 Radio Cracks to find what they say is "IN STOCK" at all there stores. Thus it saves time to order AES, it comes next day via UPS because I'm in Chicago and they are in WI. When they say it's in stock its IN STOCK!

Radio Crack only makes money off uniformed or WWWless folks that don't know any better. In the Chicagoland area I can find better products at a better price almost anywhere. Well maybe not for stuff like caps, resistors, and small wires. When Im away at school in the sticks Radio Crack is the ONLY GAME IN TOWN for cables, tape players, CD players etc so folks go there and get screwed.

I have a Uniden BC245XLT. I trialled the limited free versions of several different programs including Senss, Radio Manager, Scan Cat and WinScan.

I found WinScan the best for me. I mainly want it for programming the scanner, not controlling it. WinScan is specifically for the 245, it is simple to use and not too expensive.

If you visit www.onelist.com/messages/BC245XLT and look in the archived discussion from around October you will find other people's views on the different programs. The general consensus there was also that WinScan was the best option.

>
> Do these all provide that much image rejection at 800 MHz or so?
> How expensive are they compared to the VR-500?

It's not at 800 MHz that's the problem. It's the ability outside the 800 MHz band to reject the 800 MHz cellular images that manufacturers must be worried about. Granted, sometimes you get cell images inside the 800 MHz band (like the 245 and VR-500 which are pretty bad in this respect) but most times you get them above 900 MHz.

I believe all of the models I mentioned have passed the FCC's new 38dB(?) image rejection specs.

As for pricing, the VR-500 and the PRO-92 are the most expensive at $350. The PRO-94, while on sale at $200 until Xmas, is listed as $300. The SC180 is about $160 while the SC200 is about $180. The BC244CLT is $100, the BC248CLT $130, and the BC278CLT $180.

It amazes me:
1. That you bother to let Radio Shack lead you around
2. That you believe the dates printed in the catalog for
availability
3. That with the power of the Internet at your disposal
you are trying to buy a radio which hasn't even been
released yet

More RadioShack bashing from someone who clearly allowed
themself to be bashed by RadioShack. With all the horror
stories that show up on USENET on a weekly basis, you
still walked right into it. Amazing.

cdaush@aol.comnospam says...
>
>I had one of those and run it on 12 volts dc pos. tip for about a year
did not
>damage anything, but mine was 10 vac lots of luck......Curtis
You ran a Pro16 or a Pro34 on 12V with the center pin the +?
Or your scanner accepted 10V and you ran it on 12V?
BIG difference. The 10V, after being rectified will be 1.4 higher minus
the diode drop so something like 10V*1.4=14V-0.7=13.3 or it it is a
bridge there will be 2 Si diode drops so
(10*1.4)-(2*0.7V)=(14-1.4)=12.6V.
But you will fry/cook/destry a Pro34 on +12V instead of the +9 or +10 it
needs. I have a well cooked unit that a friend cooked. Deader that the
classic "door nail".

Not really. If the area you monitor does not use TT, then a TT scanner is of no advantage. If they later convert to TT, you can still monitor them with a standard scanner, you just can't see the group I.D.'s, and lock out ones that are sharing the frequency, that you don't want to monitor.

Cortland,

About 2 years ago I saw a letter from a guy that went to, I think, a
Taco Bell and had a $50 and a couple of $2. He tried to use the
$2 bills and security got called for him passing bogus bills.

Anyway, the guy who wrote the letter said that security kept asking
what was wrong with the money, and the manager kept saying
just look at it kind of thing. Till finally the security guy realized
what
a ditz the manager was being.

Anyway, it was a funny story.

Me right now? I keep trying to remember to try to get some $2 bills.
One of these days....

RS is actually a front for the "agency". The data collected is stored on a large super-computer located at an undisclosed location near the geographical center of the US. The nature of their mission is classified and can not be discussed beyond the closed doors of the "agency".

It is generally know that their funding is largely supplied directly from the public through sales of resistors and other small electronic components. Their "publishing arm" creates massive amounts of monthly propaganda directed at the unwitting consumers. However, this is even more sinister that it looks on the surface, they are actually creating the urge to buy in Joe or Jill consumer, to perpetuate their monster of an organization. In fact, rumor has it the entire company's high end management actually landed at Roswell NM in the 40's, and have been working there every since a successful penetration into the upper corporate structure during the 1950s.

To paraphase Charlie Daniels "Watch them boys! their a throughly dangerous men".

5185. Stupid newbie question: Why aren't police frequencies encrypted?

Newsgroup: rec.radio.scanner
Date: 1999-12-03 00:00:00 UTC

Forgive me for this ignorant question, but wouldn't police want to use frequencies or encryption so as to not broadcast their activities that can be heard on a scanner? Don't get me wrong I certainly don't mind! While listening to the events here in Seattle I can hear officers asking each other "does anyone have me on camera?...reply: yes, alot of them..."

If encryption happened a lot, why buy a scanner? :)

> listening to the events here in Seattle I can hear officers asking each
> other "does anyone have me on camera?...reply: yes, alot of them..."
>

Encryption needs to be thought out carefully before implementing it.

1) Does the information warrant encryption?

2) Does the information contain information pertinent to privacy issues
or issues of national security?

I thought the same thing. I ran Norton Anti Virus with the latest definitions to see it was a virus. It didn't indicate there was a virus present but NAV won't detect Trojan Horses. There's still no way I'd open a file from an unknown source anyway.
Just curious, did you open it and get zapped, find another way of finding out if it is a virus, or are you just going on a gut instinct?

Bruce,

Check out this link:

http://mghusa.com/products/winscan.html

At the moment, I have the software running in the background
while I'm surfing the net. WinScan has what they call a "Quick View"
window. This is a small display (about twice the size of the 245's
LCD) stays on top of any of my open windows, tucked away in
the corner where I placed it. It not only shows the trunked ID or
conventional frequency, but an alpha tag that I've assigned to that
channel. Works great.

Source record: 100567

Dave & Jonathan,

I recently modified a Relm HS-200. The chip is marked MC3371D.
Pin 9 is the pin to tap. I took a picture of the PCB when testing the
tap. I also went to the Motorola chip website to verify this was the
correct chip and pin combination. I just uploaded the image file to
help you locate it:

http://www.geocities.com/CapeCanaveral/Hall/6048/HS200TAP.JPG

This scanner is a bit of a challenge to gain access to the chip. There
are two PCB boards with an RF shield between them. The shield must
be completely unsoldered to separate the boards. I used a 40 Watt
iron and a PACE desoldering iron to remove the solder. Wasn't
difficult with this equipment... your mileage may vary. ;-)

Get stuck, need help, e-mail me and I'll help you out.

Are you sure it's not a PRO-2004. The P2004's were 300 channel w/a 400 channel mod. The 2005's & 2006's were already 400 channels.

Get a Radio Shack catalogue, and you will find their scanners listed with the frequencies that each will receive. Of course, in order to make a decision on purchase, you have to know what frequencies that you want. You should do OK for the price range that you state. It should not be necessary to get a lot of channels, if you don't live in or near a big city.

I did it, with a PRO 2005 and a voice activated tape recorder, but it was necessary to by a "loaded" cord to connect the Tape Out jack to the VOX tape recorder. The cord has resistance, or impedance, built in, apparently to overcome the "hiss", because a straight cord just runs the tape all of the time. I got the cord at radio Shack. Good luck.

From what I've heard, you've not only gone trunked, but digital as well. If that is so, knowing the freqs aren't going to do any good (which you probably already know). I don't have a list of the new freqs.

The 2006 is in excellent condition; has the G-Wiz tone board installed that allows you to listen to Edacs trunking systems. I can remove it if not interested in that. Comes with origional box, manual, antenna.
Asking $350.00 w/G-Wiz, if taken out $300.00.

The 235XLT is also in excellent condition. Comes with origional box, manual, antenna, AC power supply and battery packs.
Asking $135.00

Prices above include shipping in US only.

That was actually my point. And your example is a good one.

They only have to accept it for established debt. They can refuse to
allow the debt to be established (no sale).

5213. Pro-92 Scanner going back to Radio Shack

Newsgroup: rec.radio.scanner
Date: 1999-12-03 00:00:00 UTC
From: Greg Davis <gdavis9999@my-deja.com>
Message-ID: <829avm$nr6$1@nnrp1.deja.com>
Source record: 100654

This is really bad, because I wanted this scanner to work since there are few options. But it is just not reliable! I spent countless hours programming in talk groups and did tests on charger current draw (which I will post), so I was serious about this scanner. But I will not accept it until the bugs are worked out.

Here is my problem, as shown on the site http://sites.netscape.net/jack22182 (GREAT SITE BY THE WAY)

The ID Wobble Bug Description of the ID Wobble Bug ID Wobble, also known as ID Flicker, describes a problem with the PRO-92 where the decoded Motorola talkgroup ID changes (or flickers) while a call is being received. While scanning a Motorola trunking system in the open mode, the user will notice the ID display changing while a talkgroup call is being monitored. Aside from the changing talkgroup ID display, there are no other symptoms while monitoring in the open mode.

When monitoring a Motorola trunking system in the closed mode, the displayed talkgroup ID information will change as described above. From there, specific behavior depends on whether or not the "new" ID is in the ID list, and if it is in the ID list, if it is locked out or not.

If the "new" ID is not in the ID list, the scanner will mute the audio immediately and resume scanning, resulting in the loss of the remainder of the call that was in progress before the "wobble" occurred.

If the "new" ID is in the ID list, but locked out, the scanner will mute the audio immediately and resume scanning, resulting in the loss of the remainder of the call that was in progress before the "wobble" occurred.

If the "new" ID is in the ID list and is not locked out, the scanner will display the new ID or the alpha tag for the new ID, but will remain on the channel and continue monitoring the current call.

The net result is that the scanner will frequently interrupt valid transmissions when a "wobble" event occurs. It will sometimes stop on the wrong talkgroup when the incorrect ID is decoded and quickly resume scanning when the correct ID is subsequently decoded. In ID hold mode, the scanner will mute when the "wobble" ID is received, then revert to monitoring the desired hold talkgroup most of the time after the interruption. Occasionally, the display will show the ID or tag of the "wobble" talkgroup, and will remain stuck there, missing all traffic on the hold ID. This problem makes it nearly impossible to effectively monitor busy Motorola trunked radio systems. Under busy conditions, the scanner is constantly dropping out of calls and

unmuting on incorrect talkgroups. Attempts to monitor traffic on a single talkgroup are very frustrating. The ID Wobble bug also makes the scanner impractical for use by professionals who have a need for high reliability, such as volunteer or career firefighters who need to monitor a "dispatch" talkgroup for calls.

The problem can appear to be non-existent on lightly used or smaller trunked systems. The problem appear to be non-existent during periods of light use, only to return during busy periods.

The PRO-92 manual states "...as the signal quality worsens, or if the signal is subject to interference, the scanner might not be able to reliably decode the talk group ID. In this case, you might occasionally notice that the talk group ID changes during a transmission." Contrary to this statement, the ID Wobble bug can be observed under all signal strength conditions, even when monitoring a full quieting signal in the direct vicinity of the trunking site.

What is the PRO-92 doing wrong? The PRO-92 is using the subaudible lowspeed data stream present on Motorola analog voice channels to determine the ID of the current talkgroup. The scanner then compares the ID it reads from the lowspeed data stream to the ID information that the user has entered into the ID list to determine if the ID is a "desired" ID that should be monitored. If the ID is valid, the scanner will remain on that voice channel and unmute so the call can be monitored. In addition to talkgroup ID information for the current talkgroup using the voice channel, the lowspeed data stream also carries ID information for any priority monitor talkgroups that may be active on other voice channels. Priority monitor is a feature of Motorola analog trunked radio systems that allows trunking radios in scan mode to "priority scan" certain talkgroups on the system even if it is trunked out to a voice channel. When it sees the ID of a priority monitor talkgroup (in its scanlist) appear in the lowspeed data, the trunking radio will jump back to the control channel so it can find the priority monitor talkgroup. So, the lowspeed data is sometimes carrying much more information than just the ID of the current talkgroup assignment.

The PRO-92 appears to be getting confused by this priority monitor data. "Wobble" events coincide with the activation of other talkgroups on the trunking system. The "wobble" ID can frequently be found to be active elsewhere on the system when the "wobble" occurs. In almost all cases of "wobble", the "new" ID is a valid talkgroup on the system, as opposed to a random bogus ID that would be expected in the event of lowspeed data corruption due to low signal conditions. Additionally, the scanner performs remarkably well when decoding the lowspeed data stream under weak signal conditions. Weak signal strength conditions do not begin to corrupt the decoded lowspeed data until the RF signal itself is nearly lost in the noise.

The PRO-92 firmware needs to be rewritten to take the priority monitor data into account when it is encountered in the lowspeed data stream.

Radio Shack PRO-2037 for sale. Made by GRE.
Scanner is very clean no scratches has 1 repaired foot.
200 channels in 10 banks of 20. 10db attenuation switch.
This is a great scanner. I have all the original doc's
and box. I am asking $100.00 for this unit.
For more information and a review go here:

Hmm... So are you saying that you'd be willing to add support for the
AR8200B, but not the AR8200? Or are you saying that you will not
support the AR8200 at all, since there is a version of it that can
receive cellular?

Sorry to be so dense, I'm just trying to understand what you want. ;-)

The clerk that refused was violating company policy. That fact
notwithstanding, I can understand why - it's the same petulant
attitude one often sees in career civil servants - they get pissed off
and punative if you don't do things their way.

Next time a Radio Shaft clerk *refuses* to sell you something without
your name and address, ask the punk to get his district manager on the
phone so he can explain Tandy's N&A policies to you. ;-)

[Remainder of horror story omitted]

Wanna get even? Write or call the Radio Shaft district office for
those stores. I GAR-RON-FREAKIN-TEE you that each and every one of
those bastards will be reprimanded or fired! Radio Shaft treats
employees like expendable and easily replaceable cogs - I have
personally witnessed an employee being FIRED for failing to write up a
sales ticket for a $0.35 item which a "secret shopper" left the money
on the counter. The employee didn't steal the money, mind you - he put
it into the cash drawer - but he was busy and didn't write up a ticket
(this was back in the days before the POS terminals when they wrote up
the sales slips by hand).

If they'll fire a guy over $0.35, they'll sure as hell shitcan the guy
who followed you out to your car!

> forcing you to count and sort it first.

Well it is still legal tender. 10,000 pennies = 100 dollars. However, if paying for a product or service with 10,000 pennies is a hardship then that type of payment can be refused. I don't know about someone paying with 10,000 pennies, but I have accepted over 10 dollars worth of pennies before and I have refused payment with a $1000 bill which is now out of circulation.

> As to 'all debts', that brings up an interesting point. If you try to

> bill for the debt. BUT!!! He doesn't have to give you change!

Most gas stations POST a sign on the door or the the teller's window explaining their policy about accepting large bills after certain hours. By pumping the gas when a sign explaining the companies policy is in plain view is basically agreeing to their terms.

> As to the ID and name and address at RS, if you don't want to

> more discounts they mail me, and the rare 20% of sale slip
> certificate!!

RadioShacks asks for your name and address but doesn't require it except when signing up for services. Sometimes a salesperson thinks you have to give your name and address info when returning a product because the computer doesn't let the transaction go through without it. A store manager can handle a return w/o a name and address in most circumstances.

> As to credit cards, that's a thorney issue. Whether they can ask for
> address is open for discussion, but they CANNOT ASK FOR ID!!
> That violates a number of cardhold agreements.

This is sort of true. They are now allowed to ask for ID, but you don't have to give it. If you dont present an ID when requested the clerk must call for a voice authorization and tell the service rep that they need the card holders identity verified. The service rep talks to the customer on the phone and asks those questions only the cardholder would know, like address, dob, mother's maiden name, etc. Seems it would be easier just to show your DL and go about your merry way.

> In fact, AMEX
> specifically touts as a customer benefit you can loose all your

> to be replaced. AMEX acutally WILL come down on any business
> that hassles a customer over this. BUT!!! If you ever present an
> AMEX card that is UNSIGNED, then that's a whole other ball
> game!

If presented with an unsigned credit card a clerk must ask the customer to sign the card and call for a voice authorization. Lots of people don't sign their card thinking they are somehow protecting themselves. I've asked them why they think that and they can never really explain it to me. Why do they have a signature bar on the back of the card if signing it would put you (and therefore the credit card company) at some sort of financial risk? Lots of people put "See ID" instead of a signature on the back of their card. Doing this actually voids the card and it is supposed to be refused. Under the signature bar it says "Not valid unless signed."

To learn about AmEx acceptance policies go to http://home5.americanexpress.com/merchant/learn/learn_default.asp?learn_body=process_body.

> Writing a check? They can ask for all the ID they want, and keep

> sue the bastards!!!! And the credit card company will probably
> help you with that!

They may ask to see a credit card as identification, but you are correct that they MAY NOT write down the number. They can write down the type of card and the expiration date. Your check can be refused by a merchant for just about any reason they choose to give. Almost, meaning that if they refuse because of your race, sex or religion they'll be in trouble. I don't know why anyone would want to use a check. More fraud is committed by check than all other forms of payment combined. I mean they have check cards now that are accepted anywhere that credit cards are taken. Teller machines are on every corner. I think it is time to just get rid of checks (just my opinion).

> A side note, there was just a case at a major store where an employee

> asked, and she didn't give an answer he liked, so he made a scene
> until the manager arrived. I heard she was arrested and the Palm
> Pilot was seized just full of numbers!

Just goes to show you that using an credit card over the Internet is likely
to be safer than using it at a store or restraunt (especially restraunts
where they take your card to the back to process it).

I'm not familiar with the "inner" working of the HS-200 but at a guess
it is probably a TA31136 so look for an IC stamped 31136, if so Pin 9
will be the discriminator.

Discriminate against no code licenses???? Gimme a break! There are plenty of articles that are targeted towards the no-code people. And how do you know if they discriminate if you have never been a member?

And just for your information, the majority of hams have passed their code tests. It really isn't that difficult. But in these days of GIVE IT TO ME NOW attitudes, (read: I dont want to work for it), it is no wonder we have a no code license group.

I know that my response makes me sound like I am about 80....actually I am 37. I have had my license since I was 14 (Jeeez, I am almost ready for QCWA!!! yikes!!). I failed my code exam at least 6 times for Novice, and at least 3 times for General.

So as they would say in South Park..... Quit Ur Bitchin'.

Kent Winrich, K9EZ
EXTRA - and busted my butt for it.

Also note that this site has a link to an 'Area 51' security pass site.

Although the site notes that it is a gag, the referrer does not.

Also note the high degree of professionalism:

1. Ware them to work.
2. Data Encription ...
3. And of course a mention of Y2K which was e real big issue in the 60's.

So far as I know no manufacturers scanner was grand fathered, all must
be resubmitted for Type Acceptance to the new standard.

There are two Scan-L mailing lists. The original Scan-L is hosted on the UARK.EDU LISTSERV and the other Scan-l is hosted on the Onelist.com LISTSERV. The only relation is they both discuss topics about Scanning.

You can subscribe to the orignial Scan-L mailing list by sending an e-mail to listserv@listserv.uark.edu. Leave the subject line blank and type the words "subscribe Scan-l First-name Last-name" in the message area. Do not include the double quotes in the message.

You can subscribe to the other Scan-L mailing at the following URL:

http://www.onelist.com/community/scan-l

I believe that under current law, the largest bill that is 'legal
tender'
is the $100. There were 'notes' over $1000 for a while, I think up
to $100,000, but these were NEVER (and I've never personally
seen one) to my knowledge 'legal tender'.

As to the pennies... I'd have to look, but there IS a specific limit
for the number that is legal tender. That doesn't mean you can't
accept it, it establishes the limit for what you MUST accept in
payment for a debt.

I thought there was a limit for all coins, but someone pointed out
it is only for pennies.

Mike

Well, again, you are correct. But if you pump and claim you didn't
see the sign, you have now incurred the debt. They MUST by law
accept any 'legal tender', but again, they are under no obligation to
give you change. They could make you wait for instance until they
go to a bank and cash the bill, for example. They have incurred a
debt to you. And they can pay it any way they feel is prudent. You
initiated the transaction without conditions on how they will pay their
debt.

Source record: 100681

Just wondering if the Police have taken to utilizing FRS and Scanners to listen in on the opposition.

I know that military operations have included; plans for signals intelligence and countermeasures, have the US police delved into this area much?

I have monitored radio traffic via scanner in disturbed areas around the world and though sometimes restricted due to language barriers, I have found that when someone picks up a radio they often assume it is a private conversation between them and the other party(s).

Understanding the fervor that could be raised if the police start or there comes to public light a sophisticated "eavesdropping unit" at work domestically there may be protests louder than Seattle.

As for the protest,

What frequencies are the police using?

Any other frequencies being used by protesters?

Media frequencies, any available?

Fire and EMS for that area?

National Guard?

Any frequency or related information posted here would be appreciated.

>INCORRECT QUOTE: "I believe that under current law, the largest bill that is
'legal
>tender'>is the $100. There were 'notes' over $1000 for a while, I think up
>to $100,000, but these were NEVER (and I've never personally
>seen one) to my knowledge 'legal tender....'""
WRONG. ALL US money has always & will always be legal tender. Old $500 &
1000 bills can still be used or deposited in a bank at full face value. The US
has never "revoked" or de-valued any currency. Bills larger than $100 are no
longer printed or distributed & get "destroyed " as they find their way back to
the treasury depository, however. Old notes that were "redeemable in "gold" or
"silver" are still useable at face value, but the "getting metal" clause has
expired. You can check the US Buerau of engraving & Printing website or rec.
collecting.papermoney (if you want "flames") to verify this.
> Also, a retail store can legally say "no pennies" or "no $2 dollar bills"
because, although "legal for all debts public & private", A retail sale is
considered an "exchange", not a "debt" (pre-existing condition). ("I would
like to trade you these US bills for that scanner"). Although it would be
silly, you could open a retail store and accept no cash at all, only "used
VCR's" for payment of your wares, if you wanted. However, if you allow someone
to take the item home & send him a bill 30 days later for $ 1000 bucks, You
MUST accept any legal tender as payment for that or for "all debts public &
private", so he then could pay you with those US $2 bills, giving you
reasonable time to count them.....

Hi, Tomcat,

As others have suggested, around here DBA means "Doing Business As" and could mean just "business name." In other contexts it can also mean "Data Base Administrator" and "Design by Accident," but I don't think any of these apply.

One of the few acronyms I've heard around here on all three services (police, fire, EMS) is "PDA." (Property Damage Accident) as opposed to a "PI" (Personal Injury). Could that be it?

Good listening,
Charley_Harp@alum.calberkeley.org

Hi Brain,

Most of them can be found at the following URL:

http://claraweb.co.santa-clara.ca.us/sheriff/sccfreq.htm

Please note that some of the frequencies are slightly out of date.

The freqencies for San Jose PD are:

District	Ch.	Freq.	PL.
Western Dist D F & R	1	460.150	131.8
Western Dist N & S	2	460.275	162.2
Foothill Dist M & W	3	460.200	136.5
foothill Dist C & P	4	460.425	167.9
Central Dist K & V	5	460.400	146.2
Central Dist E & L	6	460.325	146.2
Southern Dist A & T	7	460.475	136.5
Southern Dist X & Y	8	460.525	179.9
Citywide 1	9	460.100	136.5
CLEMARS	10	460.025	179.9
Citywide 2	11	460.050	110.9
CLEMARS Direct	12	460.025	179.9
Tactical 1	13	460.175	186.2
Tactical 2	14	460.300	203.5
Tactical 3	15	460.375	203.5
Citywide 1 Direct	16	460.100	136.5

The frequencies for Campbell PD are:

```
Usage Ch. Freq. PL.
==================== ===== ======= =====

Dispatch 1 482.4625 131.8
Talkaround 2 484.2125 131.8

Please note that the city of Santa Clara is Trunked. The talk groups
are available at the following URLs:

http://home.att.net/~wwhitby/ca.htm
http://www.trunkscanner.com/states/ca.html#Santa Clara

Regards,
Bob in San Jose
```

Police officer blames city's poor planning

Saturday, December 4, 1999

By BRETT SMITH

Editor's note: Brett Smith is a 10-year veteran of the Seattle Police Department, stationed in the West Precinct. This week, the former University of Washington football player stood on the volatile front lines of the World Trade Organization protests -- downtown and on Capitol Hill.

Brett Smith Robin Layton/P-I
Taunted and spit on by demonstrators, Smith's squad was one of the first to use tear gas and make arrests. Upset over Mayor Paul Schell's apologies over police actions, he felt compelled to speak out.

This is his account, which he provided to P-I reporter Dan Raley:

This started at roll call in September when the mayor came to talk to us, to let us ask questions about WTO.

Officers told him we don't have the right equipment. We were worried we weren't going to get the hockey gear, the shin guards, that we needed or that only certain people were going to get it. The mayor got defensive. He started berating officers. He said, "If you can't do the job, we'll get somebody who can." To me, that was so unbelievable.

In October, we had our mandatory nine-hour riot training and Assistant Chief (Ed) Joiner was there. We had a question-and-answer session. Someone said, "Don't we expect violent protests?" He said, "No, there's nothing to worry about. It won't be violent."

Questions were asked in so many ways about how we were prepared. In reading the papers, the protesters had said they were going to disrupt the meetings and we had better be prepared. There was no doubt in my mind, we weren't prepared. We heard that officials from Geneva, where the WTO had been held before, had offered to tell us what happened and how they dealt with it and the department said, "We don't need your assistance, we've got it covered."

We had some follow-up meetings and an officer whose brother works for King County said there was FBI and Secret Service in their riot training sessions and they were told to fully anticipate that five to six officers would be lost during the protests, either seriously injured or killed.

We asked about this and were told by our commander not to spread rumors. We knew it was true, that the King County officers had been told that, yet we were sitting and hearing nothing was going to happen. We felt like the department wasn't sharing everything with us.

I was in the trenches for two days and I was in the middle of it. Whenever we used tear gas or bullets with pepper gas, we warned people. We gave them five minutes to leave. When the first gas was deployed, we already were getting bottles thrown at us. That's what's bothering me: Now we're being the ones accused of causing this, and we were told in our meetings, "Don't be the spark."

Nothing but professionalism was displayed by our officers. There was incredible patience as we took taunts and had things thrown at us. There was a bottle that was thrown at me and missed, cutting another officer. There was a guy spitting at me and I couldn't do anything. I couldn't be the spark. I took it.

To hear how the officers were out of hand is hard to take. We were ordered to hold our ground. It was embarrassing for me as a police officer to see a foreign delegate, 3 feet away from me, getting grabbed by protesters and pleading with me to do something, and I had to hold my ground.

There were no contingency plans for breaks or food, and that was demoralizing. We were told we would get one meal for every 12 hours we were out there, but we weren't fed, not until the state of emergency was called.

The people at the Sheraton were great; they brought sandwiches down to the line and fed us. In roll call, we were told there would be accommodations. What we got were a couple of chairs in the parking lot of the convention center, and a cold parking garage, with no heaters and no carpet. Or we got five minutes on a knee. Right away, they're treating us like second-class citizens. There was no plan to clean our uniforms if they had tear gas on them. So the next day, we went out there with tear gas on our uniforms. We weren't prepared.

Before the WTO conference, all we were saying was, "We needed to be prepared." But it seemed like they closed their eyes and said, "I hope nothing happens, I hope nothing happens."

I feel the field commander, Capt. (Jim) Pugel, did an excellent job. He was a great leader. We had confidence in him. Our lieutenant, Mike Sanford, also did an excellent job. But they didn't seem to have support. There was no command center to tell where all the troops were. Our leaders in the field did the best job they could.

We're so upset our squad of 10 or 11 wants to do our own protest march when this is all over. After being on the front line, I just want to say, "You know, mayor, if you feel you can't do the job, maybe you should find somebody who can."

City rejected offers of help even as tear gas filled streets

Schell's gamble undercuts police; preparation, leadership lambasted

Saturday, December 4, 1999

By MIKE BARBER
SEATTLE POST-INTELLIGENCER REPORTER

Seattle's mayor and police chief were offered help from Attorney General Janet Reno and Gov. Gary Locke as tear gas began to fill the city's streets Tuesday, but they initially rejected it.

They also had received warnings from police rank and file that the department was ill-equipped and undermanned to handle protests. But Mayor Paul Schell and Chief Norm Stamper disregarded those apprehensions.

For more coverage, see our WTO index.
Also see our WTO photo galleries.

"Schell rolled the dice that we could pull this off peacefully and lost," said a veteran police official with knowledge of the planning process, who declined to be named. "He thought it would be a great coup to host such a large convention without much police presence."

Many of the officers on the front lines of the chaos on Seattle's streets this week say they feel betrayed.

From the start, King County Sheriff Dave Reichert said Schell sent messages contradictory to the concerns of law enforcement.

A week before the World Trade Organization conference began, Reichert recalls, "I told people not to come downtown -- it would be more than inconvenient. The next day, the mayor says, 'Come down and shop; it will be just fine.' He didn't have a clue."

Reichert, who broke ranks with top brass in publicly criticizing Schell, promised to address deeper concerns about planning -- or lack of it -- next week. "I intend to say a little more about some of the frustrations we experienced with WTO," said Reichert, who placed 300 of his officers under Seattle's command.

King County police then and now had a supporting role with the city, who held the ultimate command, and Reichert indicated he wasn't pleased with the leadership of Schell.

Schell denied that he had turned down offers of help and that he had ignored early warnings that the city was not prepared.

The city eventually accepted the offer of aid from Locke. But that didn't happen until Tuesday afternoon and the 200 unarmed National Guard members did not show up on the streets of Seattle until Wednesday morning.

The attorney general's offer of assistance was never accepted, law enforcement sources said.

Schell disputed those accounts last night. "I doubt we would have turned down help from anybody," he said.

He also defended the city's planning and defended the officers on the streets.

"I've been out there talking to them," he said. "They feel abused by the media, not supported by the mayor or their chief.

"I expressed my regrets (to) people here in our city who were innocently involved and suffered from the use of tear gas, pepper spray and other necessary measures. People may have taken my apology as a statement that police overreacted and that is not the case. These tactics were unavoidable and appropriate," he said.

Schell also said the department was well-prepared and well-equipped from the outset.

"We've given them 'robo-cop' material. We've spent considerable time training them to expect violence," the mayor said.

"Everybody, including the King County sheriff, was involved in the planning with the FBI, Secret Service and state police. There was extensive planning for all contingencies and possibilities."

But for many law enforcement sources and officers who worked the front lines, plans seemed in disarray from the very beginning Tuesday.

What was perceived as a hands-off police approach as protesters began gathering around the Washington State Convention and Trade Center Tuesday morning was actually an unprepared department watching Schell's gamble fail, law enforcement sources said.

Police were unable to form safe-passage corridors for dignitaries or even to physically protect them from heckling crowds. It frustrated and alarmed the Secret Service and other agents protecting the foreign ministers, ambassadors and other diplomats among the WTO representatives here.

The level of preparedness was so flawed that when police decided to use pepper gas and rubber bullets to compensate for their small undermanned numbers, they had to beg and borrow.

Law enforcement sources said a policy decision had been made to dramatically cut the supplies of pepper gas recommended by a consultant advising the department how to prepare for the WTO conference.

Some sources said the consultant's recommendation for $100,000 of pepper gas was cut to $20,000.

Police officers who were on the front lines of the melee ran out of department-issued pepper spray and tear gas midafternoon Tuesday.

A handful of officers took matters into their own hands, getting permission to empty the munitions stores of police departments in Auburn, Renton and Tukwila, the King County Jail and the Department of Corrections. In addition, some drove around in a sport-utility vehicle to buy chemical agents from a local law enforcement supply business.

Meanwhile, a police captain flew to Casper, Wyo., to pick up a stock of gas from federal agents.

Once officers had collected several hundred canisters of pepper spray and tear gas, they drove the supplies as close to downtown as they could get.

Plainclothes officers then loaded the non-lethal munitions into gym bags and knapsacks and ran through the crowds to deliver them to waiting uniformed officers barricading protesters outside the Sheraton Seattle Hotel & Towers at Sixth Avenue and Pike Street.

"Those protesters could have stormed any location while we were out of supplies," one officer, who declined to be named, said in disgust yesterday.

"We just didn't have the resources we needed when the time came," another officer said.

Lisa Ross, a spokesman for the Police Department, acknowledged that "we were running out of OC."

Stamper declined to be interviewed about criticisms of his role in the events.

Ross said the chief expected detractors, but that he has supported his officer's efforts all along.

Several police officials and rank-and-file officers say Schell ignored their requests for more equipment as far back as September. When officers voiced concern, Schell berated them, telling them to look elsewhere for employment if they couldn't do it "his way," said several sources who were there. "Months ago they said they were going to shut down the city, not just the WTO, but the city," said an angry Seattle police officer who declined to be named. "Lots of warnings were there."

But by the time police finally could act with all their officer-safety precautions in place, it was too late. Outnumbered officers said they were faced with an uphill, confrontational battle later in the day, when parts of the demonstration lost its focus on WTO and turned to vandalism and confrontations downtown. In violation of police procedures, few slept or ate.

"I was so tired I was nauseous," said a Seattle officer who spent nearly 20 hours on the streets.

Those working close to them, who were also suddenly pressed into service, saw the strain on the faces of officers pushed to incredible limits and felt it themselves. Joan, a 55-year-old Metro bus driver, who declined to give her last name because she had been threatened by anarchists, saw her bus suddenly pressed into service as a 40-foot patrol car.

All day Wednesday, she ferried 30 tired King County sheriff's tactical team members, 26 men and four women, from one trouble spot to another.

"I wasn't prepared for it, but I wound up feeling like their den mother," she said. "You could hear the exhaustion in their voices. They had been up

for 36 out of 48 hours. They had eaten once Tuesday and nothing at all Wednesday."

Police sources said keeping officers on the lines for so long put everyone at risk, because tired officers are either more prone to being harmed or losing patience with protesters.

Schell and Stamper can expect to be severely criticized

Saturday, December 4, 1999

By HEATH FOSTER and KERY MURAKAMI
SEATTLE POST-INTELLIGENCER REPORTERS

It's unlikely the wishes of protesters who waved "RECALL SCHELL" signs at yesterday's peaceful labor march will come true.

But the beleaguered and disillusioned Seattle mayor is headed for tense times in the months to come.

The World Trade Organization conference and resulting "Battle in Seattle" has seriously shaken confidence in Schell and his strategist, Police Chief Norm Stamper.

For more coverage, see our WTO index.
Also see our WTO photo galleries.

Ask the citizens who watched the havoc from their living rooms. Poll downtown business owners who lost as much as $22 million in sales. Or talk to the labor and environmental groups whose protest messages were drowned out by concussion bombs. The universal response: this week was an unmitigated disaster.

Schell last night stood by the decisions he's made, but said he knows he's likely to see missteps more clearly once he gets some perspective on the week's events.

"I'm sick about it," he said in an obviously pained voice. "But I'm doing the absolutely best I can."

But Schell's repeated apologies this week to business owners, WTO delegates and innocent bystanders won't likely dampen the criticism.

The City Council has already scheduled the first hearing to investigate the way Schell and Stamper planned for the protests and how police conducted themselves during the week. Public comments will be taken at 4 p.m. Wednesday at City Hall.

Schell is likely to come under intense pressure to fire Stamper, who many blame for underestimating the risk of violence, which may have fueled chaos

on the streets.

Former Mayor Wes Uhlman, who weathered Vietnam War demonstrations during his eight years in office, said Schell was right to rely on Stamper for tactical planning, but that Stamper made huge errors in judgment and Schell has no choice.

"The police officials have admitted publicly that they screwed up," Uhlman said. "If this happened in a company, they would get rid of the CEO. In this case that's Stamper."

But if Schell manages the crisis well, restoring order downtown and building faith in the Police Department, he's likely to weather the crisis.

And as for the Emerald City, political scientists agree the city's reputation as one of the nation's most livable metropolises can withstand the beating. They say the Battle in Seattle will, like the General Strike of 1919, become an important and even proud part of Seattle history, especially because more than 50,000 people poured into Seattle's streets and not one was killed or seriously injured.

"Seattle is one of the great American cities, and the events of the last week have not in any way diminished that," said Rep. Dennis Kucinich, D-Ohio. The former Cleveland mayor watched police manhandle Seattle City Councilman Richard McIver as he was trying to attend a WTO function (see related story).

"You had 100,000 people come to Seattle and a few of them were violent," Kucinich said. "Seattle came out as the city that was at the forefront of a new social movement concerned with lifting the economic condition of people around the world."

Kucinich points out that the despite the violent riots that rocked Chicago during the Democratic Convention in 1968, the world still considers it a great city. Chicago voters overwhelmingly re-elected Mayor Richard Daley.

"Seattle should stop beating up on itself," he said.

Added Bob Watt, director of the Greater Seattle Chamber of Commerce: "A lot of the 2,700 members of the Greater Chamber are feeling shock, anger, fear, economic worry. But they're also feeling grateful . . . that with the level of violence, no one got killed."

Seattle figured it was ready for the WTO conference -- until the second day of meetings. Early in the day, demonstrators were happy, even celebrating. But they far outnumbered police, and they blocked the Washington Trade and Convention Center in an effort to shut down the WTO.

Delegates couldn't get into the Paramount, and opening ceremonies were canceled.

Authorities decided they were too short-handed to protect the street and also arrest hundreds of protesters. When protesters refused to disperse, police moved in. With the nation watching, police fired tear gas and rubber

pellets.

A roving band of self-styled anarchists rampaged through downtown, smashing windows.

Late Tuesday, police cracked down, using tear gas, concussion grenades and rubber pellets in a series of ugly confrontations. Schell declared a civil emergency and ordered the first curfew since World War II. He asked for additional state and federal help, and on Wednesday morning about 200 National Guard troops and 300 additional Washington State Patrol troopers arrived in Seattle.

On Wednesday, President Clinton came to a locked-down city with a 46-block downtown "no protest" zone where police waded into crowds, arresting more than 500.

Peaceful protests returned Thursday, and Schell trimmed back the no-protest zone and ended the curfew.

The dramatic events have left Schell and Stamper wounded in the eyes of the public, and a surprising number of people are willing to pummel them.

"They should resign," said Moti Swissa, the owner of the jewelry store Swissa Inc. on Fifth Avenue. "They screwed up big time."

Jim Kneeland, a Democratic political consultant and Schell supporter, said working at his office near the convention center gave him "new sympathy for the people in Sarajevo."

Kneeland said he was frustrated that Schell seems out of touch with those who paid the most for the WTO chaos -- thousands of low-wage workers in downtown stores and restaurants who won't get paid for this week.

Yet, Kneeland predicted Schell will survive if he brings business back downtown and demonstrates that he's learned from the mistakes of his Police Department.

But so far, Schell has shown no willingness to criticize Stamper or his officers. "Yesterday, I expressed my regrets that people here in our city were innocently involved and suffered from the use of tear gas, pepper spray, and other necessary measures," Schell said. "People may have taken my apology as a statement that police overreacted and that is not the case . . . Those tactics were unavoidable and appropriate."

And then there's what's being called "the McIver incident." When McIver attempted to enter a WTO event Wednesday night, he was told to get out of his car and was handcuffed by police. Council President Sue Donaldson said the incident wouldn't have happened had Schell bothered to get WTO credentials for council members.

Yesterday, the National Association for the Advancment of Colored People and Seattle Urban League called for an investigation of the incident, believing McIver may have targeted because he is black, or because of past criticism of police treatment of minorities.

Message-ID: <19991203201833.25122.00000398@ng-cs1.aol.com>
Source record: 100579

I have been using my BC245 for a couple of months now and in fact have put together a couple of one-list sights for Middlesex County NJ. I will send the information for those towns shortly- as soon as I update the data I have.

What I would like to send now is information for Trenton NJ Trunk. Since I work in the next town I decided to bring my TT with me today. The system is a Moto II Astro Digital System. It seems because it is digital- no one cares about reporting TG's. I think that this is a mistake because I do believe that we will see a digital scanner in the future. I'm very hopeful. In that event it would be very nice to have a set of TG's to get one started.

In fact only the police services appear to be digital on this system. The fire, DPW and other city agencies are all in the clear. I recorded the following TG's today until my battery gave out. I couldn't really listen to the comms so I don't have much detail for the clear TG's.

Rickey Stein rickey456@aol.com
x-RCMA International Editor
Frequencies:
853.9875 854.2625 866.2250 866.7250 866.7625
867.4000 867.4250 867.7125 868.2125

These are all clear

I have a Radio Shack PRO-2006 full coverage scanner for sale.

The scanner works fine. It has the cellular band restoration modification, the 400 channel modification, and scan speed modifications. These were already made when I bought the scanner.

I rarely use it as my intended monitoring of several repeaters including 222 MHz never came to pass. I have Motorola Minitors for my local PD interests.

The PRO-2006 is for sale at $200.00 plus $15.00 packing and insurance if it is to be shipped.

I have IE 5 installed on my PC and Outlook Express.
You can set it up so that you can view contents of messages before opening them.
When I downloaded the message, there was no picture but still the paper clip in the corner.
So.....must be a program !

I tried to save it to the desk top & my virus killer told me there was a virus in the message.

So I didn't open it.

I you have IE 5 etc, you can set it up the same way.
Look under maintanance in Outlook Express 5.

yours,
deepdiver.

Well, I said it in the past, and I'll say it again...

UPS sucks. They cannot handle the Christmas rush, coupled with the continued increase in E-commerce sales via the internet.

I'll tell you, the market is ripe for a third shipping compnay, specializing in internet sales. Any entrepeneurs out there?

I purchased an item from a dealer in Delaware last Friday, 11/26 It was to be shipped on Monday, 11/29 via ground to NJ, and was in fact shipped on Monday. Compensating for the season, I did not expect it next day yet, it was on the truck Tuesday for delivery, but the driver was so overloaded that by 9:00 PM he had not reached my part of town, and was called back in by UPS, with still-to-be -delivered packages on the truck, including mine.

Now it gets interesting...

Instead of delivering it to me on Wednesday, UPS shipped the package to Toledo , Ohio! Unreal.

They then shipped it back to NJ, and it was there today, however, I did not get it. Hopefully, after waiting another weekend, I SHOULD get it on Monday...maybe

Is there an excuse for this type of service? Is this UPS at it's best? I think they can do better.

NEVER had a problem with US Postal Service, yet most delaers will not ship to a PO Box, or use the USPS.

NEVER had a problem with FEDEX, but they are MUCH more expensive.

Is there room for a third company? Hhhmmmm

Dan

Source record: 100596
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I usually refrain from non scanner posts but this one is somewhat
related to scanners (notice I said somewhat)...

I've been burned by UPS also. I sold a scanner to a person on the
NE coast, I live in the SE coast. I use computer generated labels
so there's never a "penmanship" problem. UPS inadvertantly
sent his radio to the wrong shipping hub, in a nearby town. Think
they could hussle someone over to pick it up... or send it directly
to the correct hub the next day? NO! Their software and method
of operation forces them to send it to another hub, way out WEST.
We both watched helplessly for the next two weeks as the scanner
traveled from town to town, all the way, being tracked on the UPS
online system. UPS couldn't do a thing about it. Unless it stops
for more than 24 hrs at any one scanning location, it is on its own.
It finally arrived, no apologies, no refund. Yes, UPS sucks.

This is why I only ship USPS Priority Mail now. They are cheaper,
faster, deliver on weekends for no extra fee, much more reliable (that
wasn't my first encounter with UPS!), and will provide the boxes, tape
and lables to businesses for free:

http://supplies.usps.gov/ (follow the supplies link)

The only reason I can think of why they won't use USPS more is because
UPS will pick up packages (not just letters) at the business location.
It is convenient for the business and since YOU pay shipping costs, they
aren't worried about the extra fee. ;-)

Ok first of all it doesn't HAVE to be 50 ohm.... the system really doesn't
care.

I use RG6U (statellite dish cable - 75 ohm) with adapters into a TV
distribution amp (that you can buy at Radio Shack for 29.00 - 39.95) look for
high gain and
and switchable FM trap

Runs 4 scanners off one antenna perfectly

Heh heh. I was in Radio Shack yesterday and asked
the clerk if he could help me find a Motorola
to BNC-jack adapter for a scanner. He sneered
back at me, 'Sir, this is Radio Shack - we
don't carry Motorola Products'. I went and
pulled it from the shelf and held the adapter
before his face. "You mean we DO carry that",
he says.
Gawd, I hate those worthless pinheads!

5285. Newbie: BC-245xlt trunk/channel capacities and SVC key

Newsgroup: rec.radio.scanner
Date: 1999-12-04 00:00:00 UTC
From: DTel <NOdtelliardSPAM@hotmail.com>
Message-ID: <82atmt$i2h$1@holly.prod.itd.earthlink.net>
Source record: 100600

I just got this radio a few days ago and it seems easy to operate, though I have a couple questions. I'm only familiar with my old non-trunking Pro-51. Anyway my questions are:
For trunking is it necessary to program all the frequencies that a trunk uses into a single bank? If this is the case and since there is a limit to 30 frequencies that can be stored, what about those areas (like here in King County, Seattle) where the # of freq. in the trunk is 58?

Once you have inputted and searched the trunk for IDs am I correct that the max number of IDs I can scan is 10? So in other words if I want to scan for additional IDs I'll have to enter all the frequencies again into another bank and input 10 additional IDs to scan and then finally set the scan to scan both banks?

Finally what is the purpose of the SVC key while trunk scanning? I click on it once and the flashing crossed out data led goes out and click on it again to turn it off. I do notice that with it off I don't get as annoying of a squelch tail and secondly it doesn't get hung up on an ID (as if someone's keying up and not releasing).

I must be missing something since I'm the only one yet to be asking these questions. Please forgive my ignorance and newbieness!

I was just driving through Baltimore Last Monday and the Tuesday before that.
This was the first chance I got to play with my PRO-94 scanner in trunk mode.
I heard Baltimore EMS/FIRE and Police without a problem. They weren't digital
and it appeared to be a Motorola type II system. the PRO-94 seemed to follow
the conversations without problem.

I'll try and get the freqs and talk groups up on my website soon.

Has anyone compared the PRO-92 and PRO-94 side by side? I'd be interested in hearing from a "NON RadioShack" person on this.

I have the PRO-94 and at first I was not impressed for conventional scanning. But after spending more time with it, and setting it beside my PRO-26, PRO-2006, and PRO2035 I'm starting to gain a bit more respect.

Last week I was in Florida (The capital of Trunk Communications :o( ) and got my first real experience with the PRO-94 in the enviroment for which I bought it for. And I was impressed. As far as I could tell it didn't miss any communications and worked great in these systems:

Orlando & Orange County = Motorola II
Polk County (Davenport where I spent the week) = Motorla II
Lakeland = Motorola I

And I was somewhere where they had an Ericsson system but I can't remember where that was. The PRO-94 handled the Ericsson system great.

On the way from PA to Florida and back I monitored many trunk systems along the way (including the BIG Baltimore, MD system) and am gaining new respect for the scanner.

George

5290. Uniden SC200 sensitivity measurements

Newsgroup: rec.radio.scanner
Date: 1999-12-04 00:00:00 UTC
From: "Michael J. White" <mike.white@erols.com>
Message-ID: <82b7mv$j3r$1@autumn.news.rcn.net>
Source record: 100605

Here are some measured sensitivities for the Bearcat "SportCat" SC200. These readings were made on a professional service monitor, and show the sensitivity in microvolts for 12 dB SINAD on FM (except as noted):

Freq (MHz) Sensitivity (uV)
35 .25
50 .25
120 .52 (AM)
150 .28
412 .30
450 .40
500 .36
850 .58
900 .60
950 .80

So, it's not the most sensitive receiver in the world, but these are very respectable numbers for an inexpensive scanner. Remember that 12 dB SINAD sounds about like a "half-quieting" FM signal; the "minimum discernable signal" would be somewhat lower.

Measured battery drain is 60ma with squelch closed, and 90ma with squelch open and volume at 1/2. The display light adds 60ma. The battery pack is 4 AA sized nicads, rated at 700 mAH. This would seem to confirm the manual's claim that the pack "...will supply up to 12 hours of dependable use."

After another day of goofing around with the SportCat 200, I'm still liking it a lot. It's a very appealing combination of features, size, quality, performance and price. I'm going to keep it, and I'll just have to get used to the "Owl Eyes" look of the panel :-)

Thanks to Craig "Test Equipment Is My Life" Brown for taking these measurements.

Happy Scanning...

Mike White

I'm having a hell of time trying to get this to work.

The software is talking to the radio, it's just not stopping on any stations when the squelch is open. I have tried numerous settings, My 2006/OS456 combination works just fine.

I have also tried 2 seperate computers, different serial cables.

What communication settings are those of you that have this setup using ?

I hope my radio is not flaky.

Thanks

http://www.al.com/news/birmingham/Dec1999/4-e306103b.html

Fridays Headline: Police aren't turned on by new radios

Saturday Headline: Bring back old police radios, say councilmen

Officers began using the digital equipment, which was not designed specifically for police work, just over two weeks ago and have complained that several features make it impractical. The officers have encountered dead spots and delayed signals in some areas of the city and inside some buildings. Lights on the radio also make it impossible for officers to conceal themselves in the dark.

Councilmen Bill Johnson and Jimmy Blake urged Southern LINC, the company providing the new police and fire radio system, to correct the problems as soon as possible. But until those problems are fixed, the city should depend on the old analog radios as the primary public safety communications system, they said.

They put a 92 up against a 94?? Hey fellas, how about putting it up against a 245 or some other serious scanner? I personally think my days of buying Radio Shack scanners are OVER!!!!

On Sat, 04 Dec 1999 15:03:11 GMT, Tom@astro.net wrote:

>In our actual testing, when we placed a Pro-94 (Cat. No. 20-524) side by side with a PRO-92 (Cat. No. 20-522) we found each radio missed A FEW (and the emphasis is on only A FEW) hops. Our Product Development Team said missed hops were about the same - neither radio got everything. And when holding on a specific ID, when the Pro-94 model misses a hop, the hop is completely missed while the Pro92 typically picks it back up after a second of delay. [Reason: the Pro-94 scheme looks only at the data channel; if it misses the data, that transmission is completely lost; but the PRO-92 reads the subaudible data on each transmission. If it misses the hop, it continues to check active channels and easily finds the conversation again.

Hell, they can't even handle NON-RUSH periods!

>I'll tell you, the market is ripe for a third shipping compnay,
>specializing in internet sales.

The problem is that many internet retailers (e.g. amazon.com) sign
exclusive deals with UPS; If you want FedEx or DHL or any other
carrier for overnight shipping, you're SOL.

What this means is amazon.com and any other retailer who ships
exclusively via UPS is SOL as far as my shopping $$$ are concerned.

Hi Douglas,

If they're using UHF or 800 Mhz then it's very easy to determind.

The repeater inputs will be +5 Mhz for the UHF Band (450 - 470)

The repeater inputs will be +3 Mhz for the UHF-T Band (470 - 512)

The repeater inputs will be -45 Mhz for the 800 band (851 - 869)

Hope This Helps

Bob

Disagree.
I have one, the main disadvantage is,
it cannot receive NFM, that is, FM with small bandwidth.
there are modifications around, how to use the ATT button
for switching the low bandwidth AM filter in FM,
but I do not have this.

Generally it is not so bad as you mention,
of course, everything can be improved.

W,

I ordered some parts I needed in a hurry from a company and asked them to send them UPS. I phoned back an hour later to order some lower priority parts. For these I told them to toss them in the mail.

I don't think I need to tell you which package showed up first....

What I find particularly amazing is that UPS trucks have no radio in them. Meanwhile, EVERY other courier company I know of (including the four guys that run around the town here) have radios and quick tracking methods.

While we're bitching about UPS. Shipping something across the border with UPS seems to always be an unpleasant experience. My last package, despite being clearly labelled with my broker's name, was "cleared" by another company. Not too surprisingly, it was classified incorrectly and I was charged duty when the items were in fact duty free! (In this case it was antique car parts, but computer equipment and most radio gear are exempt too). The handling costs far exceeded the dollar value of the goods.

In all fairness, I don't know if other shipping companies are better but I sure seem to have had a disproportionate number of bad experiences with UPS.

I forgot to bitch about the postal service. I used to work for Sports Illustrated magazine customer support. You know those free Swimsuit Videos and the annual Swimsuit Issue? Well, if you got yours you were in a minority. This was the biggest complaint we had. Other complaints were that the customer always received the magazine late and it had dog-eared pages and coffee rings on it. In my experience, I had to order the Summit Racing catalogue (it is a good one) three times before it actually showed up. I guess I had to hit every car-guy from Ohio to here before I got my copy. Funny how my Pasternack connector and RFInd catalogues always get here first try. :->

Mine does the same. This is due to the default setting of MODE and STEP for the US frequency band plan. You can easily change the MODE, STEP, or both by pressing SHIFT then MODE and/or STEP. If either the mode "FM, NFM, etc" or step "5,12.5,etc" is flashing, this indicates a non-default setting. You can cycle through these settings by repeated pressings of either the MODE or STEP buttons. When either MODE and/or STEP stop flashing, this indicates you've selected the default MODE/STEP for the given displayed frequency.

Good luck

USPS is the way to go for now. I do a SUBSTANTIAL amount of online purchasing via 1-on-1, eBay, and so forth. I don't refuse UPS, but I have absolutely ZERO faith that they can deliver when promised. Next day UPS is the same as 4-day ground.

The "we'll get it to you when we damn well feel like it" attitude is dominant with UPS. I've never had a package arrive when it was supposed to with UPS, EVER and I have them deliver to a business address. It's sad, but after over 50 shipments in the last year, that's what I've found to be true.

I think it's important to note that I am biased since my father works for the USPS as a city carrier. I love the old man, but I love getting my packages on time, too. If the USPS couldn't get it to me when they said they would, I'd be pissed at them, too.

I refuse to ship UPS no matter what the circumstances. The USPS is hungry for a piece of the market and they have a better delivery network. That's my opinion.

Turbodog: Wants a Trunk Tracking scanner, but is having a hard time talking his wife in to it.

Three days into infinity....
turned my 2052 off.

Came back next day and
turned the dial and it started up....

refuses to find the control channel
and just searhes all the time the 800's.

first observed problem. will see what can
be done to alleviate this short-coming....

just stays on "search"....

will reprogram the 800's over again and
see what happens.

this unit has two antennae input...one for the
given screw-in one it comes with and then on
back-side the bnc connection.

also the serial port connector on back.

well, be advised
no looks as in SURPRISED
whey you buy
don't sigh.

bill conduit
etc.

Using Winscan you can add alpha tags to the screen on the computer. You can also date/time stamp group id's in the search window, provides a lot more search features for logging/searching on the computer, great for uploading new freqs/talk groups/etc.

You don't really need it but it makes scanning more fun when sitting around the shack...

You can also have a number of pre-configured frequency files that you can quickly load into your scanner. You can completely reset the scanner and reconfigure it in seconds with Winscan. The Winscan program also uses a "flat" file format for these frequency files, which means you can easily edit them directly with any text editor. Which can sometimes be easier than using the Winscan GUI interface. Also, if you are programmatically inclined, it is easy to input frequencies from a file and format a new frequency file for Winscan. For instance, I can go to http://www.perconcorp.com/datafinder/index.html and cut & paste a whole page, or pages of frequencies into a simple text file. Then via a simple program read in that raw frequency file and format a new Winscan frequency file, compete with alpha tags. As the previous poster said, it isn't necessary but it makes managing your frequencies and scanner easier and more fun.

Greetings folks..

Llyod, you forgot to show us a picture of your truck with 57 antennas sticking out of it. It's amazing that you still have enough room for rotating beacons on the roof and a magnetic BARF sign for the door. I suppose you've got a uniform too? LOL ! I'm sorry.. folks this is just amazing what's happening to our society these days..

It *does* make me wonder what he's going to do after January 1st with this Web site. If there was *ever* a piece of code that I hoped wasn't Y2K compliant - this now takes the cake.

Cheers,
Gary

The mere fact that he's mentioning the word "Nazi" on "his" Web page:

"For the record, I am not a Nazi, a neo-Nazi, a racist or an anti-Semite..."

shows there was some concern at one time if not now - at least in his mind.

> I need to know if the SC200 has the following:
>
> 1. Data lockout and or Birdie

You can lock out each of the 200 memory channels independently. In search mode you can program in up to 50 memory skip frequencies which will be skipped in subsequent searches.

> 2. Reverseable Search scanning?

No, scanning and searching are up only. There is a VFO mode that lets you manually tune around up and down.

> 3. Squlch Tail

There is a noticable squelch tail, about like I'm used to hearing on VHF comm HTs. If you tighten up the squelch control the tail gets quite a bit shorter, but still there. Of course, you only hear stronger signals that way. I don't find the tail objectionable, but your mileage may vary.

I bought the scanner for its coverage, PC programmability, and alpha tags. It is not perfect, but I think it is very good.

Best of luck, and happy scanning.

Mike.

Don't use the Mini-Circuits amps. Been there, done that. They're not designed as low noise. Hamtronics (716-392-9430) has them, or you can pick one up an any store that carries a lot of scanners.

Motorola Type I systems are 800 Mhz only.

Motorola Type II systems can be found on 800 Mhz, 900 Mhz, VHF and UHF.

EDACS can be on all bands.

LTR (EF Johnson) can be on all bands.

> I swear that I heard a Motorola Data channel on 453.925Mhz in Sheboygan, WI.
>
> What does a EDACS data channel sound like (different than Motorola's?)

The data channel of a EDACS system sounds very simular to the data
channel of a Motorola to me.

> and how do you tell if the trunked system is digital? (What does it sound
> like)

I believe data channel for a digital system sounds the same. I think
only the voice channels are digital.

> I am using a RS Pro-90, and was wondering if I was missing anything with
> this scanner.

You're missing several of the Business Trunks in the 900 Mhz range and
several Federal Trunks in the 406 Mhz - 420 Mhz range. You may want
think about upgrading to a Uniden BC 245 XLT. The BC 245 XLT supports
Motorola Type I and II and EDACS. I also recommend that you avoid the
Pro 92 from Radio Shack, it runs into problems with Motorola Systems
when the system gets busy.

The only thing that I like about the Pro 92 at the point is its ability
to track LTR (EF Johnson) systems. I initially thought that my Pro 92
was tracking the Motorola Type II system in Santa Clara, CA just fine,
but when the system became very busy during the day, it started missing
parts of conversations. I just purchased a BC 245 XLT yesterday and it
seems to be doing much better. I really wish that I had not sold my
Pro 90 so quickly last week.

Fed X will deliver a pound from Oregon to Florida in 3 days for $8.80, with a money back guarantee, internet trackable all the way. UPS will deliver the same package to a business for $4.50, some residences for $5.50, and other residences (too far from UPS offices) for $6.50, this time of year taking about 10 days to do it, internet trackable, as well. USPS will deliver the same package for $1.80, no matter how long it takes. Tracking? _They_ don't know where it is, either!

When it's my choice, _I_ know which way I'm going.

I would first check the antenna connection to the unit - especially if the center pin of your antenna connection behind the radio is intact. I had a handheld that had the same symptom. I found that the rubber duck center conductor pin had broken off. Worth checking.

Good Luck.

I think Radio Shack sells an amp+splitter for TV antennas. 50 - 900
MHz, or something like that. The noise figure is probably higher than
you want, but would probably work fine for scanner needs.

I would just try the straight cheap TV splitter before adding the amp,
though.

He has a point. An intelligent thief would sign the stolen card himself before trying to use it. So if someone walks in with an unsigned card, they will be automatically suspected of being a moron, not a thief. ;-)

I have a Uniden BC3000xlt, have had it for a couple of years and enjoyed it. However I don't have the need for the extensive frequency coverage and memory channels anymore and am looking to buy a new scanner with features that I could use more. The scanner is in good condition, I bought it used and since it has gotten a few scratches in the case and the display. I have the original box, manual, antenna, earplug, and belt clip for it. I was not happy with the original battery pack so I replaced it with a extended capacity pack which will run the scanner for about 8-10 hours as opposed to the 5 hrs the standard pack provided. I am asking $200.00 and will consider splitting shipping costs, also open to any reasonable offers.

Gee. Sounds to me like it's broke. You know, components do go bad, especially after years of use. Could be the RF amplifier failed. That happened to my Uniden 9000XLT. Take it to your local RadioShack and have them send it to their repair facility. It will cost you a few bucks, but you'll have a working scanner again. Or, or course, you could retire that one to the dumpster and invest in a new radio. Your choice.

Uhm, the 2006 has 400 channels natively. You sure its not a 2004 or somesuch?

I live in a city called Lafayette in East Bay. I have been looking into getting a scanner for quite a while. I know that trunked systems are often used in megalopolises such as the San Francisco Bay Area. My city is covered by the Contra Costa Sheriffs Department. Anyway, I have been looking at the BC3000 and Pro-2066 but here is my dilemma... I can only get 1 scanner at this time (due to my somewhat limited funds) so should I get a scanner with wide coverage and many channels like the BC3000 or a Trunk Tracking Scanner with less coverage and fewer channels?

P.S. Why would It be so hard to make a T.T. scanner with wide coverage?

I have used the optocom utilities and i am able to adjust any settings
that are offered.

I can run ScanStar with the Optocom choosing CI-V mode which appears to
run the Optocom in OS535 Mode. However, when I run ScanStar using the
Optocom in the Optocom emulation mode the unit never stops on an active
frequency.
I see the squelch light go on so I know the squelch has been broken,
but the Optocom keeps on scanning.

Source record: 100474

Hi Sooung,
Why not try both, in one sccanner. Like the Uniden BC245XLT.(HH) I had a Pro-2006 and only used it for police, fire and aircraft. Then cops & fire went to 800 freqs. That left me with just aircraft. So I bought a BC895XLT as a base unit. I liked it so much, I just ordered the BC245XLT (HH) as it will scan both TRUNK and non-trunk at the same time. Also I will get a copy of "WINSCAN" software to program in freqs. into both units. You can also run scanner on your computer with this sofware.

Hope this helps you out,

182pilot

Is it possible to manually go through PL's and DPL's with the Pro-92, and when hit upon the right one, you'll hear the audio. On my BC8500XLT this can be done and it's a great little feature for finding PL's. Unfortunately, it doesn't do DPL though.

Regards,
Tony

5382. ICOM 8500 losing sensitivity

Newsgroup: rec.radio.scanner
Date: 1999-12-05 00:00:00 UTC
From: Bob Rodriguez <robertr@netcom17.netcom.com>
Message-ID: <82eris$9lh$1@nntp5.atl.mindspring.net>
Source record: 100478

I agree; either the ICOM 8500 or AOR 5000+3 is a good choice for all-band listening, but each has different strengths. I have both, and I found the AOR 5000+3 to be especially good for FM DXing due to the better choice of filters (6, 15, 110 or 220 khz), it also does well on TV and below 30 mhz, but the ICOM seems to be slightly more selective in the AM broadcast band. The ICOM picks up lots of cellphone images even though the main cell frequency rangers are blocked, especially at 1100 mhz and 1850-19000 mhz. It also doesn't reject FM intermodulation very well; we're too close to WDST and WRKW-FM, and without a good notch filter, the FM recenption is a mess and it bleeds onto some of the scanner frequencies. The AOR seems a little better in this regard and does not usually get cellphones.

One big problem I had with the ICOM is that during storms, even if lightning is minimal or non-existent, it twice blew out a diode or something so that the sensitivity above 30 mhz is dramatically reduced; in fact, when this happens, you'll get a clearer signal with 20 db attenuation than with normal or 10 db attenuation. Very odd; has anyone seen this problem and found a way to prevent it? Looks like I'll need to send it back to ICOM again. The AM and shortwave section is unaffected. I wonder if it's related to switching antennas between the AM/SW side and VHF/UHF. On the AOR, you can use the same antennas for both with the proper adapters, and I've never seen a problem with that.

ICOM service was pretty helpful and the first repair was covered under the warranty.

Bob Rodriguez, Kingston, NY

5383. Rec. from Scanner to mp3

Newsgroup: rec.radio.scanner
Date: 1999-12-05 00:00:00 UTC
From: Sooung <NOSPAM_Sooung@home.com>
Message-ID: <flC24.23571$f5.232095@news1.frmt1.sfba.home.com>
Source record: 100479

Are there any programs available on the internet that would allow me to VOX record from a scanner to a mp3 file? It seems that extended recording to wav files, even in lower sampling rates, would fill up HD space pretty fast. Not that I'm really hurting for space (with 10 gigs total) but I'd much rather have a 1 hour CD audio quality at 50 megs than some ungodly huge wav file at the same quality and length. I'm not saying I want to record at CD quality but well bleh, it was just an example.

I'm in the same "dilemma. I have had the BC245 for the last two days and love it for trunk, but as one would expect it's less than wide coverage relative to a couple scanners a friend is willing to sell me (AR8200 or Trident TRX-100XLT, anyone have any comments on these btw?). I don't have the cash to spend on two scanners especially since I'm new to the hobby.

Then again is wide coverage all it's made out to be? I've heard cellular calls from images and frankly it is as boring as everyone says it is so I don't really care about those frequencies anyway. Besides the cellbands is there anything worth wanting to listen to in the gap in the 500-800 section and 956 MHz +? The trunking is pretty cool it's nice hearing complete conversations.

What version of ScanStar?

Have you contacted ScanStar?

I use SS 7.3 something and it was pretty much plug and play with the
Optocom.

Well I have a RS Pro-90 that I picked up at a Pawn shop for $80 and I
love it. I did have a Pro-74 Race scanner and this one kicks it butt.
This Pro-90 has 300 channels and covers every freq that I want + Stuff I
hardly ever use like Marine band. I like the trunking feature on it and
I use it all the time to listen to the local PD and FD. It didnt have a
manual and the ones on the RS support site stink so I had to figure out
how to use the radio the hard way, but I am impressed. Here's the freq
range it will do:

29-54, 108-136.9875, 137-174, 406-512, 806-823.9875, 849.0125-868.9875,
894.0125-956

I'm unsing version 7.57.

I've just had a few email messages back and forth with sam.

I have tried 3 seperate PC's with the same results.

I'm going to call Optoelectronics tomorrow.

A scanner is only as good as you want it to be. When making the purchase, you must consider the area and what you want to listen too before you purchase. Will the scanner in question do what you want? Will it cover the frequencies where you reside? Is it a good price for the options? How durable is it? If portable - how long will the battery last before it needs charging? Just a few thoughts one should consider.

Greetings Eric..

I seem to recall an exchange regarding the satisfaction (or lack thereof) one would probably experience operating at these frequencies.. ;-)

Cheers,
Gary

Regardless of the band of choice folks, get the audio encoded. It's *extremely* easy for folks out there with a scanner to hear you at any frequency you choose. And a vast majority of the folks with cordless telephones NEVER consider this! They have absolutely no idea they're being monitored both near and far. You mention this to folks at the department store that are considering a cordless, their jaw just drops wide-open as they finally put 2 and 2 together...

Greetings Mr. Sprinkles, others..

Books the thickness of your Webster's Dictionary has been written on the subject of what (and how) is adequate grounding. In your case, I gather your interested in as much protection from lightning as possible. As Bill (the other post) has recommended you ultimately want to have a path from the antenna straight to earth ground. This means no convenient bends around the corner of the house because its aesthetically pleasing. Lightning doesn't give a damn about being aesthetically pleasing when it strikes. Further, in a direct lightning strike, this grounding will do little to protect the rest of the housing and wiring. This includes wiring from AC mains to antennas and even the telephone input. ALL lines into the house including metal piping in several instances will have a massive amount of charge on them during a direct strike.

Although the grounding scheme can get quite elaborate with a series of grounding points either deep into the ground or not very deep but a web-network, your best bet is either a >8' stake (10' or greater if possible) directly into the ground with heavy (thick) gauge wire straight shot into the base of the antenna. An alternative can be a galvanized cold water pipe that IS buried beneath the ground for some distance. In this case, you'll want to make damn sure you've got the pipe clean where your attaching your ground wire. A rotating wire-wheel brush on the end of a drill helps clean the pipe where you intend to attach the ground. Further, periodically inspect this connection for rust. As this chemical reaction takes place, the characteristic impedance to ground goes up, until, effectively you have NO ground. So, good clean, tight connections with a straight path to (ultimately) a long straight stake in the ground will be a decent choice for a DC ground.

Cheers,
Gary

By NOT signing your card, you have left a place for the thief to sign
it themself (am I the only one that's figured that out?) and when the
clerk at whatever store checks the back to compare the signatures...
guess what... they match 100% as it's his (or her) OWN handwriting!

Hint: it's a LOT easier to write someone else's name in your OWN
writing, than it is to try and forge one...

99.99.... % of all clerks out there do NOT ask for secondary ID if the
signatures match! Why would they... they match and there's no obvious
reason to suspect anything is wrong.

Someone who walks in with an unsigned card, is usually automatically
suspected of stealing the card in the first place... Sure, you have
your ID and everything to prove that it's your card, but YOU now have
to overcome the bias against yourself you have just created...

AND answer a lot of dumb questions like "Why don't you sign it?"

I do like the idea of putting "SEE OTHER ID" or something similar
there but there are concerns about invalidating it depending on your
card agreement. I think that most of the card companies would be ok
with it though as it makes sense and helps protect you and THEM
against fraud...

Just my 2 cents
will you take a check for that? Here's my Visa (unsigned) as ID :)

I heard at one point an officer reporting having found one of the radios
(someone apparently dropped it) and was returning it to the command post.
I don't know if they had planned monitoring of the FRS frequencies, but
they certainly seemed interested when they stumbled across a lost radio.

> What frequencies are the police using?

Regular King County trunked system. Seems to me like talkgroup 4019 was the
big one, but others have reported different ones. I was unable to find 4019
on any of the TG lists I have so I don't know what it is "officially." But
it was pretty much continually active.

5415. Good *indoor* antenna?

Newsgroup: rec.radio.scanner
Date: 1999-12-05 00:00:00 UTC
From: sh@dogcow.org
Message-ID: <s4ju0kpnqeg168@corp.supernews.com>
Source record: 100521

I live in an apartment and have a PRO-2050 which I use to monitor the King County/Seattle trunked radio system. I'm currently using the antenna that came with the scanner. It works alright, but my apartment seems to be impressively well shielded. Despite living downtown in the middle of coverage zones for everything, most cell phones don't work in here (they get perfect reception right outside the door). And even though I live about 12 blocks from the nearest tower site for the trunked system (which is on top of the tallest building in the city), my reception is sometimes a little weak.

I'm wondering if there is an antenna with good performance in the 800MHz range that can be used successfully and relatively unobtrusively indoors in my apartment. Something that plugs right onto the BNC connector on the back of the scanner would be ideal. I don't need a great deal of improvement; just a little. I have no practical way of mounting an antenna outside.

Any recommendations? Or ideas on other ways to get that extra little bit of signal in here?

TIA

sean

I have had the same problem as you I had a package sent all over Texas for two weeks. when it got to me it was not good. The heat had destroyed it. It was a battery.

Bias? Come on. You must live in the big city. This is Hooterville.

>AND answer a lot of dumb questions like "Why don't you sign it?"

I really enjoy refusing to answer stupid questions from nosy clerks.
I guess everyone needs a hobby. Maybe that's a subconcious reason for
me not signing my cards.

Obligatory scanner content: I once bought batteries for my scanner,
using an unsigned credit card.

-Jeff

Last night at 3 am Midwest time there was a SWAT team in action AKA Cheeta team. They were tear gasing an apartment building. They were going from apartment to apartment. It was wild as hell they were saying that they were breaking windows and ploting were the "criminals" would run out from. Seems like they like GAS in Seattle?

I listened as they went through a lot of places and came up empty. I feel asleep listening it went on too long.
Thanks for the link

Posters are correct in the "doing business as" reply. Used in a sentence I hear often on my scanner (i.e. when officers are investigating an alarm call at a location) dispatcher replies with "d.b.a. is responding in a white gmc, e.t.a. (estimated time of arrival) in 20 minutes". I hope this helps.

>Well,I wasn't going to post on this,why aggravate myself,but what the
hell..

I was a novice in 1973,I passed the novice test easily,I borrowed a
friends old footlocker transceiver,and I was going to buy it if I liked
it.I had a bad opinion about CW before I got my liscense,and the
"wonderful" experience of operating CW totally turned me off.I threw my
ticket in the drawer,and forgot about it.I got my No-code in 1991,and I
use my HT occasionally,not a lot.
For years I wanted,my General,and even started to learn CW again to get
it,but after so long,getting up to about 7wpm,I just had enough!A couple
of years later,I started again,same result.After the third time,I
realized I didn't want it anymore.The CW requirement finally killed my
HF dreams,I have HF equipment,but don't really care about talking to old
guys about the Wx or whatever..
This CW requirement nonsense has been going on for over 50 years,if they
want to keep it part of the exam,make it only 20%,so you can pass and
blow the CW part.This maybe will passify the CW'ers,and get people
interested in being a ham.I know several people who heard about the no-
code ticket,and thought it meant the code req.for HF was gone.They were
all excited,and were shot down when they were told the real story,only
one of these people has become a ham,the rest just SWL or do the web..

Darrin,

Six hours battery life on this is outstanding. I have been able to get up to three on that battery -- but I may be turning the audio up more than you do. I bought the radio about two months ago. Serial T001617. And I suspect I've been spoiled by the excellent battery life on my ICOM R2 (and the really amazing three continuous days scanning with a Standard C508). Before I conditioned the 700 maH battery it lasted just ONE hour. Urrgh. Then about 12 to charge again. I now use either a Maha drop-in charger or the RS version of the Maha universal charger to make sure batteries are properly charged up. This seems to help.

About frequency error, I am talking about 250 Hz off. This is not bad by the standard of even a few years ago, but for SSB it's a bit too far off to simply dial in a frequency and get good copy. Since I have about 90 USCG and USAF HF channels programmed in it is an issue for me. The software does help.

Here's listening to ya!

Cortland

>Oh please.

What I am referring to with this is the fact that for the last few years, one of the largest causes of credit card theft happen right out of peoples mailboxes. You know, when the new card is sent to you and BEFORE the cards are signed and the morons (thiefs that is) walk into the store with them.

This is why some card companies now require the card to be 'activated' before first use. My credit card company requires you to call a 1-8xx number, enter your month/year of birth and then provide your code-word to the operator who then matches you to your account and may/may not ask you even more questions.... argh! all because poeple don't sign thier cards!!! <grin>

Any attempt to use it other wise (legit or not) is treated as a stolen card. Don't laugh... It happened to my wife. She got her new Visa last month, forgot to 'activate' it and went to use it (signed and all) guess what the POS showed... "Code 10 call for authorization" which means it's a stolen card and you are to try and detain the person while you call for 'verification' and the operator calls the police... fun fun fun... (note: this is with my particular 'vendor', mileage may vary with yours.)

While I was working for a large (inter)national retail firm's security dept. back in '95, we had almost weekly updates from Visa/MasterCard and AMEX about stolen cards as well as updates on "success stories" where they bragged about "recovered" cards. 99% of the time the crook didn't sign the card... (if it was unsigned in the first place that is...)

The 'average' smuck that steals your wallet and ends up with your unsigned card can, as stated before, simply sign it and use it at will...

>>Sure, you have
>>your ID and everything to prove that it's your card, but YOU now have
>>to overcome the bias against yourself you have just created...
>

>Bias? Come on. You must live in the big city. This is Hooterville.

Well, I don't think of it as a big city, and most people wouldn't either but I guess a population of ~1 million is so-so. And yeah, I guess it's a 'big city' attitude but you never know who's out to bend ya over the barrel.... It could be a stranger, it could be your neighbor, hell, it could even be your own family! you never know nowadays. (it could even be you... HEY! what are you doing with that blind fold!?!?)

I have also worked in small towns. The big advantage of that is that you get the protection of 10 to 1 the clerk knows you (and your daughter/son/wife/sister...:)

>>AND answer a lot of dumb questions like "Why don't you sign it?"

>I really enjoy refusing to answer stupid questions from nosy clerks.
>I guess everyone needs a hobby. Maybe that's a subconcious reason for
>me not signing my cards.

Now that's a reason I can get behind. Stir the pot, make the little ankle biters work for their $4/hour!

Still think that the "see ID" method would be a better compromise than leaving it unsigned...

>Obligatory scanner content: I once bought batteries for my scanner,
>using an unsigned credit card.

And the clerk (or manager) probably knew you by sight if not personally (from previous purchases etc...) ???

Did he/she at least ask for some other id? If not, the little begger should be fired asap.

BTW: Back to the original thread... The large firm I worked for was dear 'ol RS <grin> don't worry, I hate them like everyone else...

Anyways, I was told directly from my regional manager (all of western Canada (whoops gave away that I'm a canuck...)) that the reason for the collection of the 'data' was two fold...

1. to collect demographic data about their customers. Ages, address, phone number, preferences, buying patterns etc. All of this can be cross referenced with Census data and the like (gotta luv gov't databases) to get an amazingly accurate picture of who you are and what you do day-to-day.

(btw: no one has mentioned age... did you know that there is (at least in '95) a field on the terminal screen for the entry of the buyers age? I was told that I _HAD_ to fill it out (under canadian law it's illegal...(i think)) and since I wouldn't ask, I was to guess.
I always put either 2 or 99 :)

This helps the buyers decide year-to-year what types of products to bring in. This is also the #1 reason you find less and less "real" radio type products there now. when 90% of the population want toys and cordless phones, that's what they get.

hmmm.. maybe that's why... the toys for the ones I entered a 2 for and cordless phones for the elderly that can't run to the phone... that's it... it's MY fault... oh the shame <grin>

2. to generate increased revenue for the company. When he said this, I perked up and pushed him on this. They claim that they do not sell the data DIRECTLY to mailing list companies and direct market companies BUT they do sell it to "Strategic Partners" (dejavu... I think I've heard that phrase before. In this thread yet.) and they (RS) has NO control over what those 'partners' go and do.

So I could be 'XYZ' company, buy your purchase history from RS, and then make loads of cash re-selling it to mailing lists and direct marketers (let alone using it for my own marketing.)

I saw a listing from my local Telco where they were selling the phone list matched up with demographics (name, address, age, average income of neighborhood, and some other info) for $1000 for 100 names. Comes on a little 3 1/2" floppy. That's a HELL of an incentive for a company to collect as much information about you that they can...

Sorry for rambling (ranting) it's late (4am) and I tend to go on (and on...)

Scanner content:
Just got a 'previously experienced' BC245 and I love it. A PRO-92 is a little out of the budget... wouldn't mind the alpha-tagging but I think the rest of the radio is a little too 'young' right now anyways.

$125 wasn't a bad price I think.

Happy scanning

It doesn't hurt to monitor the input frequencies occasionally, without P-L filtering.

I have two local agencies on high band using a repeater input frequency for discrete communications. A different tone is used on the discrete channel than used to access the repeater.

Geez, I'd be happy if they did that! This is only one of SEVERAL situations where UPS gave me a run around. I came home one day when I was expecting a package (I had the tracking #). No sign of UPS, so I logged into their web site. It indicated the package was still on the truck. I surfed the web for a few minutes when my wife came home and told me there was a UPS sticky on the door. My jaw dropped. I checked back on the web to find "5:45 - No Answer - Addressee not home." My computer is in the DAMN LIVING ROOM. The idiot never knocked, just ran to my door and put the sticky on! The clock on the wall read 5:50. I called UPS to complain and to have the package held at their warehouse the next day. They noted that on their paperwork. The next day, I went to the warehouse with my web printout showing that it was supposed to be there, and they had put it back on the damn truck. AAARRRGGGHHHHH!!!!

Damn, guess what. I'm expecting another package today. Wish me luck...

No George, you have owned TWO Uniden/Bearcat scanners - the PRO-94 is
made by Uniden/Bearcat. :-)

PRO-94 = cut down version of BC245..

You must be unemployed. ;-) At most households, nobody is home all day
because both spouses work, so packages left on the doorstep are prime
candidates for theft. :(

Yes, this has happened to me, also. I was home waiting for a package
that I'd paid for overnight shipping on; the driver left a post-it
note on the door and left without ever knocking/ringing the doorbell.
So much for my overnight delivery...

>Damn, guess what. I'm expecting another package today. Wish me luck...

Heh heh - you need it! ;-)

I have a Yaesu FT-50RD dual band HT (5 watt version) with many accesories. Receives all of 800 MHz.

Also have Sony 7600G. All in excellent cond.

Will consider trade on Drake SW2 w/remote or Drake R8. Must be in excellent cond.

Bill K9KZ

In addition to all the fore mentioned reasons, UPS in Huntsville, Alabama refuses to accept US currency.
Even at their pick-up/drop off terminal.

I quote"this note is legal tender for all public and private debts.

As an agency we will no longer do bussiness with UPS or any vendor that can not/will not ship with an alternative carrier.

MYBUTT ITCHES wrote:

> What is a cell mod?

A cell mod is when one opens up the forbidden cellular phone band on his or her own scanner making reception of cellular phone calls possible and from what I hear this mod can provide sometimes very entertaining listening at times. BTW no one in this news group ever listens to the cellular band or would even consider doing a cell mod on their scanner because it is illegal. Regards, Mike Burch. K8MB
Did this help the itch? :-)

The PRO94 is a good scanner. It's a Uniden built scanner with a different feature set
than the BC 245 XLT. I Personaly like the 94 very much! . I chose the 94 over the BC 245
because i got it for $179.00, works on AA batteries and does exactly what i wanted it
to do which is monitoring my local motorola trunked system. The big draw back for
most is that it doesn't monitor Trunked and conventienal frequencies at the same time.
But for me, I personaly could give a shit about that. I have many toys and this one handles
it's role perfectly.

Good Luck!

People have scanners that were manufactured before the ban
that include celluar. I returned mine because I wanted the full coverage
25-1300 mhz Pro-26.

Source record: 100306

I bought my "T" model, the US version, back in Jan. of '99 .. it
received the cell 800 mhz freq's right out of the box. But as I was
interfacing it to my PC and experimenting with the interface software, I
eventually did a reset of the radio. Thereafter it did not receive the
cell band. However, it is quite sensitive to cell band band images up
in the 1400 to 1500 mhz range so losing the 800 mhz cell band was no
loss.

I have not seen the real thing yet, but the 2000 RS catalog has an interesting looking holder. It's in the FRS radio section and only costs $5. It looks like it will either double stick tape mount or screw mount to the dash, and hold the scanner via the scanner's belt clip. Looks promising, and kinda hard for RS to mess this one up since it's only a piece of plastic. ..... Then again, RS can mess up ANYTHING!

Hank,
If you turn the squelch all the way down, does it stop scanning. The two simplest, but unlikely problems are 1) Open squelch pot, 2) The PC trace where the antenna connects is open.

I own a 2032 and I am equipped to repair this. Cost would be $25 + shipping both ways. I could even add computer control for $70.00 while it is here. See http://www.qsl.net/ka2pyj for details.

Tony

5459. PRO-92 and LTR mode

Newsgroup: rec.radio.scanner
Date: 1999-12-06 00:00:00 UTC
From: Scanner <azscanner@hotmail.com>
Message-ID: <s4p0678dqeg75@corp.supernews.com>
Source record: 100315

Was playing with a Pro-92 this weekend, and it wasn't to bad in the LTR modes, but...when Monday hit it was baaad!

I tried to monitor 1 group on the LTR system here. In the closed mode all I heard was phone calls (not intermod/images) and other talk groups and all with NO TG IDs displayed. I had our dispatch do ten counts on our TG and IT NEVER HEARD IT because it was too busy hearing everything else.

I like the concept, but there are no MOT or EDACS here and it seems excessively priced for a PL monitor for standard systems.

I will be returning it for now.

We used to have a UPS driver that would KICK our door HARD insted of ringing the bell. We've been lucky to have a driver for quite a while now that is nice and curtious. Can't say the same for our postman though. I think we get about half of our mail at times.

They also sucked maintenance wise. I worked on many of them. At least the
PRC-77 was completely solid state and had fewer modules.

: If my purposes are for listening to Police/Fire. I have a RS Pro-51.

I had a PRO-51 for a long time, I just gave it up as a christmas
gift for a friend, I'm fixing to get a Uniden Sportcat SC-200 in
its place. My area is very active in Trunking. There are 3 systems
in use here, Motorola Type I Smartnet, Motorola Type IIi Securnet
and an EF Johnson MultiNET LTR system. The two Motorola trunks I
mentioned are no problem to follow. Both of them use a 5 repeater
system. 4 voice repeaters and 1 data repeater, simply locking out
the data channel and continuing to scan the remaining 4 frequencies
or repeaters works quite well. The only thing here is you would
end up hearing ALL traffic. Its not impossible to use a PRO-51 to
monitor trunking, thats what I'm getting at. I've done it for
about 4 years now with the PRO-51. I'm not saying that it won't
be easy though but it won't make your scanner worthless..

DTel (NOdtelliardSPAM@hotmail.com) hath said:
: Forgive me for this ignorant question, but wouldn't police want to use
: frequencies or encryption so as to not broadcast their activities that can
: be heard on a scanner? Don't get me wrong I certainly don't mind! While
: listening to the events here in Seattle I can hear officers asking each
: other "does anyone have me on camera?...reply: yes, alot of them..."

Not a stupid question, ignorant yes.. :) I would guess the biggest
reason why agencies don't use encryption is for the fact that it would
decrease mutual aid. If Agency A is using VHF-Hi and Agency B is using
VHF-Hi they both can talk to each other if the need rises, but if Agency
A is using encryption on their primary channel, that would leave Agency
B in the dark as to whats happening in A's area.

I know of some departments who use encryption, but they only use it
on side channels for crime scenes and detectives, everything else is
in the open. Thats the only thing I can think of, is that it would
make mutual aid real difficult.

It's unlikely a municipal system's hardware would be boosted just for a particular event, however it is likely that FEMA had one or more of its mobile communications centers in town for the WTO. These trucks can operate on virtually any frequency in the spectrum, act as repeaters and interface with pretty much anybody anywhere, serve as entry points into the telephone system etc. One or more of the FEMA units may have been serving as temporary repeaters for the local systems during the WTO.

800 numbers use a different system, called ANI (Automatic Number Identification) which is not affected by the blocking setting of your CND (Calling Number Delivery, AKA Caller*ID).

>>Still think that the "see ID" method would be a better compromise than
>>leaving it unsigned...

>Yeah, on second thought, I kinda like that.

Note that this still leaves many credit cards invalid (specifically the ones that say "not valid unless signed" on the back).

>When RS initially took my name, somehow they bungled "Jeffrey" into
>"Jefferoy", so it was pretty easy to identify the resultant junk mail.

Some people do this on purpose (introduce a minor typoraphical error, or use a middle initial which is different from their own, or add a "Jr." even though there is no "Sr.") in order to track who is selling their name and to whom. A sort of "Junk Mail Geneaology," if you will. ;-)

I'm interested in buying a HF receiver, for space shuttle
retransmissions mostly. Been checking on the lower priced used ones like
RS DX394 and DX398 SW radios. What worries me is this Beat Frequency
Oscillator thing I keep hearing about. This is what I'm trying to
understand.................
Retransmission of Shuttle air-to-ground audio from WA3NAN may be heard
on the following frequencies: Then after these freqs. it says......
Where SSB is Single-Side-Band and LSB, USB indicate either Lower and
Upper Side Band. A short-wave receiver possessing a Beat Frequency
Oscillator (BFO) is needed to receive these transmissions. Now I'm lost.
Do most Shortwave radios have this (BFO). Does the DX394 or DX398 have
this? If not what is the next best thing? Info on this will be GREATLY
GREATLY APPRECIATED. Rocky

If these ESP units you are talking about on RT 80 & 287 are the same ones I have seen on RT 295 in South Jersey. (White vans with arrow boards) they are maked as belonging to the D.O.T. who also patrol these roads to assist disabled motorists.

I spoke with OPTO Tech support this morning.

It appears the hardware squelch toggle of the Optocom may not be working.

I'll be boxing the Optocom up and sending it back to be fixed. I figure i
may as well get the Comcounter installed while I'm at it.

BTW The support from Signal Intelligence has been great. Sam has replied to
my messages very quickly and on the weekend no less. So if anyone is
concerned
about the support, it's first class. I also have found Optoelectronics to be
very good
from past experience, and speaking with them today has hasn't changed my
mind.

Some of the drivers can't read, either - UPS drivers have delivered my packages to the wrong house, even thought the computer-generated, laser-printed label clearly had my address on it.

My suspicion is that the UPS drivers are too overworked and stressed because UPS management is squeezing every last drop of work out of them, so they make dumb mistakes. Thay also take shortcuts, like dumping the package on your door and leaving, without even ringing the doorbell to see if anyone is home to get a signature.

OK, start at http://www.panavise.com/comm/indash/indash.html and pick out the In-Dash mount that fits your vehicle. Then contact Canyon River Cellular (http://www.canyonriver.com/accessory_panavise.html) and order the In-Dash mount and a Port-a-grip 2000 703. The total will be just over $30 and will look perfect and keep your scanner out of your cupholders and off the floor.

I have one on eBay
(http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=210475678). The
auction ends today, so you might want to check it out in a hurry. The radio
has been modified for European low band, Keypad Beep Disable, improved
audio, and cell band. Housing shows some wear (it's a 7 year old radio),
but it functions flawlessly.

>Enterprises. Are they part of the same company?

While Grove and MT are both owned by Bob Grove, he has never made any attempt to hide the realationship. Nothing sinister or evil. After all, they cover the same hobby.
Active antnennas can be of great servie to HF (ie SWLing) and, under the right conditions, can really help the VHF/UHF listener.
But, in order to really get the most from an active antenna you need to be away from all radio transmitters. Active antenna tend to overload, or cause scanners to overload and often produce a whole mess of spurs. Or signals that are either the products of 2 seperate signals, or just show up where they really aren't located.
Out in the country, away from ALL TV/AM/FM services they can help.
In crowded cities, with lots of radio sources active antennas are a lot less usefull and may be more trouble then they are worth.
Just my thoughts and expereinces, others might see things very differently!
YMWV!

what people really want fast food freq's for is so they can put them in their modded ham rig and transmit on 154.600 with a 107.2hz tone and listen to all the trouble they're causing on 35.02 or on 105.1 on their car stereo(105.06 is the third haronic) but that's illegal and I know no one around here would do that :-)

The kids at my local mcdonalds routinely have arguments, but they always output it through the order box frequency, so that anybody walking by hears what they are yelling about. It's quite funny when they are fighting and a customer pulls up and goes "huh? I just want a cheeseburger."

>other "does anyone have me on camera?...reply: yes, alot of them..."

Oh, if a reliable real-time encryption system existed, I expect most
police departments would glom on to it in a heartbeat.

Fortunately for us, there are none --YET. Several municipalities are
considering it, however. I'll be surprised if it works properly on
the first try, though. The problems are several-fold. First, most
radios would need to use some sort of digital communications protocol.
Second, it would also need to be on some frequency around or above 800
MHz, because the bandwidth one would need doesn't exist on lower
frequencies. Third, it would need lots of receiver sites. Unless the
coding overhead is substantially increased, no drop-outs can be
permitted in an encrypted situation. And finally, multi path
propagation is a problem for them, as it would be for any digital
communications mode.

This is not to say that it can't be done. PCS works, well, sort of.
However, the cost is pretty high. I suspect most police departments
are choking at the price tag for a system like this.

When all this goes down, look for the ACLU and others to sue them
under the FOI act for recordings and/or transcriptions of what they're
sending to each other...

After playing with my PRO-94's Trunking mode I like it.
I've owned one Bearcat in my life, and I'll NEVER do that again (BC9000XLT, The king of Images!, that scanner had so many Cell phone images in the MilAir band, it made MilAir monitoring impossible)

Source record: 100391

The Range Control comms you heard on 30.450, would have most likely
have been Ft Hood TX. They usually have checkins with the various
Ranges on the hour. Blackwell, Blackcat Bravo, Clear Creek, Henderson,
PK & Trapnell. Are some of the Ranges heard.

Ft Irwin CA & Ft Bragg NC, are the only Ranges I know of that regularly
use 38.900.

Cheers for now, Ian Julian ZL1TBM Hamilton New Zealand

OK, OK, I'll sign my card. I guess I just wasn't thinking like a
criminal.

>This is why some card companies now require the card to be 'activated'
>before first use. My credit card company requires you to call a 1-8xx
>number, enter your month/year of birth and then provide your code-word
>to the operator who then matches you to your account and may/may not
>ask you even more questions.... argh!

Lately, you have to call the 800 number from YOUR house. I'd bet that
if you had caller ID blocking, that system wouldn't work. Or am I
wrong? Are 800 numbers immune to caller ID blocking?

> all because poeple don't sign
>thier cards!!! <grin>

Sorry. I'll try to do my part...

>Now that's a reason I can get behind. Stir the pot, make the little

5517. Re: Uniden SC200: First Impressions

Newsgroup: rec.radio.scanner
Date: 1999-12-06 00:00:00 UTC
From: nexus@datasync.com
Message-ID: <82f17h$54n$1@news.ametro.net>
Source record: 100415

Thanks for thie information, I have more questions that are
very important to me. I do agree the look is ugly, but I
would willingly sacrifice the looks for the features.. Please
test these and respond on here if you would..

I need to know if the SC200 has the following:

1. Data lockout and or Birdie lockout I scan between two
frequencies quite often with my radio and the one thing I
wish it had was a way to lockout the damn carriers and
other interference. (very important)

2. Reverseable Search scanning? Does it have only one-way band
scan or can you scan upwards or downwards with the SC200? again
this is because I do a lot of band scanning and its nice to be
able to revrse which way its scanning in the band. (important)

3. Squlch Tail? I had a PRO-51, if you've researched scanners
before then you would know the PRO-51 is terible with the SQL
tail with a loud crackle. I love silence. BTW for those of you
who are going to respond to this, I am already aware of the mod
to correct this, I don't have the PRO-51 anymore so I don't care
to hear about its fix. I'm simply using the PRO-51 as an example
of what I DON'T want in the SC-200 of a SQL tail. Please let me
know how bad of a SQL tail the SC500 has (important)

I guess the most important thing here is the birdie/data lockout
and if it does have it please specify how many frequencies it can
lock out. The others listed I can do without...

Thanks... Jimmy, nexus@datasync.com
http://www.datasync.com/nexus

Michael J. White (mike.white@erols.com) hath said:
: I just got a new Uniden SC200. I bought it by phone from Communications
: Electronics Inc (CEI, http://www.usascan.com/). Service on the phone was
: brisk but efficient, the scanner arrived earlier than promised in perfect
: condtion, and was a brand new factory pack. Their price was $183, and
: shipping was a pricey $19, but they ship by FedEx. CEI promises a 61 day
: "satisfaction" guarentee, with no restocking fee; that was a strong
: incentive to buy it there. (I have no connection with CEI, just a satisfied
: customer).
:
: I knew going in that I would not like the looks of the scanner. It just
: looks kind of hokey with that blue bezel and sort of "owl eye" look to the
: buttons. However, I have to admit that it kind of grows on you; It's a

: little bit cuddley.
:
: The manual is clear but not exhaustive. There were several paragraphs I had
: to read a few times to get things to work right. The manual covers
: "SmartScan" downloads (see below) and cloning, but makes no reference to PC
: control. However, I've seen posts from folks to say they're real close to
: having freq management sw ready. I'm waiting, guys... !
:
: The scanner has a nice quality feel to it; nicely made and sturdy feeling.
: The buttons are the usual rubber jobs, but seem to work ok. The only real
: disappointment is that the scanner runs of a dedicated nicad pack, not AA
: batteries (charger is included). I think this is a drawback, but probably a
: minor one. The nicad pack looks just like those in a cordless phone. One
: advantage of the nicads is that the scanner is pretty light. The external
: power/charger jack is a small coaxial number, and needs 12 vdc, so you could
: get or make a cigarette lighter plug setup for your car.
:
: In on-air tests in the VHF band, the SC200 performed not quite as well as my
: Icom RC-10, but almost. I'll have detailed sensitivity figures by the
: weekend, but it seems to hear quite well, at least in that band. Audio is
: not hi-fi, but seems adequate.
:
: The controls are very logical, and work very well. The alpha tags are
: implemented especially well. You select alpha or numeric mode with a
: "Display" button, and you can do this on the fly as it scans, although it
: doesn't show the tag until the scanning stops on a busy channel. When
: stopped or in manual mode, you can toggle between numeric and alpha mode by
: pressing the "Display" button. You can't name banks, however. One big plus
: is a "VFO" mode; you can enter a freq and tune around with the knob without
: storing the freq in a memory. Very nice feature. It also has the usual
: search functions (preprogrammed or you enter the limits) which works fine.
:
: I tried the "Smartscan" deal where you download freqs from their server (a
: nice rs-232 cable is included). I had to surf around to find the software
: that lets you use the internal modem in your pc (couldn't find it on the
: Uniden site; they don't even list the SC200 yet), but I did find it and it
: worked fine on the very first try. It took about 3 minutes to download
: around 120 channels for my area. The download includes alpha tags which were
: fairly logical. It all went very smoothly.
:
: Unlike my R10, cloning requires a second unit. That is, if you try to clone
: without a second unit connected, it generates an error. It's obviously
: looking for some sort of handshake from the receiving unit. My R10 happily
: zaps out its data whether there's another radio there or not. All the bits
: just spill out on the floor.
:
: Overall I'm quite pleased with the SC200; I think it's a keeper.
:
: Things I like:
: Ease of use; most things work just the way I want them to

: PC control (folks say 3rd party freq management software is comming "real
: soon now")
: Alpha tags that work very well. At last I know what I'm listening to!
: Reasonable receiver performance
: Nice backlight
: Nice quality feel, light weight
:
: Things I don't like:
: "Owl Eye" decor, blue bezel (just a matter of taste)(having said that, it
: looks a lot better in real life than the picture on the CEI web page; real
: bad picture there)(also, I have to admit that it grows on you :-)
: Nicads (I'd much rather have AAs)
: Can't assign alpha tags to banks
: No PC software. There's just no excuse for not providing this. Come on,
: Uniden, who do you think you're kidding??? Just pop a floppy in the box, and
: you've got a runaway winner on your hands!!!!
:
: So, those are my first impressions; your milage may vary.
:
: Thanks to Rich "Strong Signals" Wells for his recommendation to try this
: nifty little scanner, and for his terrific scanning web site
: (http://www.strongsignals.net).
:
: Happy scanning!
:
: Mike
:

Do you want to listen to anything that's on a trunked system? That
should help answer your question. If the answer is NO then go for the
BC3000. If you answered YES then maybe you should consider a BC245.

What's the best "active antenna" out there now for handheld scanners, like the VR-500?

I checked out Monitoring Times, and see they currently advertise an "Active Duck" and wonder how this is.

Also, it seems to me from looking through the magazine (for the first time) that there's awfull strong connections between MT and Grove Enterprises. Are they part of the same company?

What I find curious is the description of the power requirements.

PAge 104 of the December Monitoring Times says that "The Active Duck comes with a battery installed and, because of its low 1 ma current requirements, it lasts for 8 to 12 hours befor ereplacement is necessary."

So, tell me. What kind of battery lasts for 8-12 hours giving 1 ma? A small potato?

I was also burned by UPS. I was planning to travel to the flood-ravaged areas in North Carolina in October of this year. Wanting to take a portable ham radio along with me to monitor emergency communications (and assist if requested), I arranged to buy a used radio from another Ham in California. The seller put the radio on UPS the following day but I did not see it for sixteen days! By then, I had already been to North Carolina and back. Meanwhile, I had become concerned when the radio did not show up and got the tracking number from the seller. I tracked the package on the Internet and found that it had been sent from California to Illionois or somewhere where it was "missirted." Instead of properly sorting the package and sending it on to me in New Hampshire, UPS sent the package back to California!

I purchased a brand new radio which I then took to North Carolina with me. Cost about $350. As I recall, UPS apologized for the inconvenience. What they did *not* do was explain why the package took so long to reach me or offer to reimburse me for unnecessary expenses, like buying another radio.

>P.S. Why would It be so hard to make a T.T. scanner with wide coverage?

I think you ought to get a trunk tracker or you will be missing out on
a lot of traffic. However, your problem (and the rest of us too) is
that if you want a single scanner that scans trunked and conventional
at the same time, your choice are two handhelds: the BC245 (around
$220) or the Radio Shack Pro-92 (around $330). However the Pro-92
probably isn't suitable for tracking the Alameda County trunked system
(if someone is doing this successfully please jump in and correct me).

So if you can wait until early next year, when Uniden will
(supposedly) release the 780XLT (a mobile version of the 245 from what
I hear), I'd do that. Or, if you don't mind a handheld, or a base (pro
2052) that can't track both trunked and conventional at the same time,
go ahead and buy now.

Obtaining Motorola Radio Service Software (RSS) for various models is a
constant source of discussion in the Trunked Radio message board
(http://www.electricrates.com/trforum/trboard.htm) so I would try there
first. But be forewarned: you're talking about big-$ software that
Motorola guards jealously. You'll have to be discreet.

5538. FT: RadioShack Pro-2030 new in box

Newsgroup: rec.radio.scanner
Date: 1999-12-06 00:00:00 UTC
From: mrbill@mrbill.net
Message-ID: <slrn84mc45.nei.mrbill@ohno.mrbill.net>
Source record: 100436
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner

I've got a radio shack/realistic Pro-2030 scanner new in the box (it was bought a few years ago but never used and left in the original box). The date code on the scanner is pre-ban, so it can be modified to receive the full 800-900mhz frequency range.

You can find all the info you need about the 2030 at this address:
http://w5gb.nmsu.edu/kc5kto/base.html#pro2030

Looking to trade for a good entry-level 2-meter HT, or packet radio equipment (a tnc and HT with all cabling, or such - I really need a cable to go from a DRSI DPK2 to a Kenwood 7950...) Will consider ANY offers - I've already got a pro-2006 so I dont need the 2030 now.

Bill

Michael J. White (mike.white@erols.com) hath said:
: > I need to know if the SC200 has the following:
: >
: > 1. Data lockout and or Birdie
:
: You can lock out each of the 200 memory channels independently. In search
: mode you can program in up to 50 memory skip frequencies which will be
: skipped in subsequent searches.

I'm aware that you can lock out memory channels, I was refering
to while in vfo or in scanning lingo, limit search. Thanks, you
answered my question, 50 frequencies is more than enough for my
needs. I have about 10 birdies or signals between the two freqs
I scan that I have to keep hitting the resume button on.. data
lockout or band lockout is going to greatly enhance my enjoyment.

: > 2. Reverseable Search scanning?
:
: No, scanning and searching are up only. There is a VFO mode that lets you
: manually tune around up and down.

I am aware of the VFO knob. if you go to www.usascan.com you will
see all of the information I know :) unfortunatly it didn't cover
the exact info I needed, but do know from reading that site that it
has a vfo knob, which is worthless to me if I want to start scanning
down. I'll just have to get use to not being able to push the down
arrow during a limit search. :(

: > 3. Squlch Tail
:
: There is a noticable squelch tail, about like I'm used to hearing on VHF
: comm HTs. If you tighten up the squelch control the tail gets quite a bit
: shorter, but still there. Of course, you only hear stronger signals that
: way. I don't find the tail objectionable, but your mileage may vary.

I use a lot of commercial radio gear, Motorola, and I just like how
the radio goes silent when the transmiting station stops transmiting.
I have a Kenwood TH-G71A and it to has this feature, I didn't even
know it would do it until I programmed in some local police repeaters
and put their ctcss in, when they would unkey my radio never crackled!
Loved it!!!! Still Love it.. Love the G71A its an exelent dualband...
sorry off track there.. I was just fed up with the PRO-51 having such
a terible SQL tail that I wanted my next scanner to be better. From
what I read the PRO-92 has virtually NO SQL tail which almost sold it
for me, except for all of the flack its getting (thanks to the internet
for alerting me) and the display does indeed suck, i looked at it at

my local RS.. Not interested in it now, so I'm looking at the SC200
as the replacement for my PRO-51..

: I bought the scanner for its coverage, PC programmability, and alpha tags.
: It is not perfect, but I think it is very good.
: Best of luck, and happy scanning.
: Mike.

There isn't much in the area of Coverage, but for its sub 200 dollar
price its expected. The Alpha tags are a very nice plus, pc programmable
is great, and the possibility of pc control makes it even better.

Thanks for the response..

Suggest you scan all of the Secret Service frequencies (you'd be surprised how much is in the clear), check the wideband multiplexed FM links on 225-400, check the 415.700 downlink also. Also, check the cellular frequencies for the press and also WHCA.

You don't HAVE to be a ham to do that. :-)

I just was trying to make a point that the Packet is better than CW is
better than fart signals is a dumb debate. It goes on forever with a
thousand different points of view. Regardless of it all there are always
going to be things on the test that, depending on ones point of view, are
going to be outdated and useless.

If you know a FH system is in use, then positioning a receiver on each channel used will guaratnee
reception . If no encryption is used on top of THAT, you should be able to understand what is said.

It is incapable of control by PC - I should know because I tried ;-).
It appears that it does not have a command set like the 895 or 245.
However, I found it can be programmed via PC if you know how to trick
it, which is better than nothing.

We are ironing out the final details on the programming software, and
barring any last minute problems, it should be ready any day now. I can
confirm that it works, as that is how I programmed my sportcat.

Stay tuned for details,
-Phil

You can still find some pre-ban GRE® Superconverters☐ that are good for any receiver that are 400 mHz capable, also scanners such as the Uniden® 200XLT☐ that are easily "adjusted"; at hamfests, in NG's like this one, and ads in communications magazines. All "newer" receivers are epoxyed or otherwise tamper resistant, and service manuals are as extinct as a full size spare tire.

"Full coverage receivers" are still available in Canada, Europe, (Australia & New Zealand?).

As others have said, it is illegal to intercept cell phone comms, now also cordless phones, so this info is strictly for historical, reference, purposes only. It is not like anybody would actually do any of the above to listen to phone calls, even when they are really radio transmissions.

I sure wouldn't! Even if I had in the past, which also never happened!

The scanner was a radioshack pro-2030 and I was using an antron99 cb
antenna 35' off the ground, I've figured out that the british broadcast was
just a harmonic from the bbc on 15.22 but I was getting all kinds of
stations all over the america's and a couple french speaking stations that
could have been in europe

Britain does not have any VHF tv channels, they operate exclusively on UHF.

I believe the "Active Duck" only amplifies freqs _below_ 30 mHz, it is then passive (or switched off to prevent interference in VHF/UHF reception). (BTW, if anybody has tried this unit on SW or MW bands on wide coverage receivers, pease post your review, TIA.)

Answered by other responders. But since we have lost several large equipment distributors over the last few years, it ain't a bad thing this one is still in business!

Hello,

I recently added a PREFIX look-up form on the QSL page. If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

You are invited to http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

73!

The local Fry's Electronics was blowing these things out over the weekend for $99.95... I bought several and have an extra one sealed and unopened that a friend decided to back out on... Rather than suffer the indignation of standing in the return line at Fry's - the Manhattan Beach location has to be the WORST- if someone out there wants it I will zip it to you for cost, tax, and shipping - make it $110.... The unit is essentially a RS Pro-62 - 200 channel with an RCA label - triple conversion and 800 Mhz coverage - cell. If not I guess there's always EBAY - ugggggggggh - I'll just return it...

5562. Pro 2052 UPdate: It works, but certain caveats apply

Newsgroup: rec.radio.scanner
Date: 1999-12-07 00:00:00 UTC
From: 20intothefuture <upupokok@email.msn.com>
Message-ID: <ey9#rQMQ$GA.227@cpmsnbbsa05>
Source record: 100255

Thought my new 2052 was dead. It scanned
the 800's and would not find the control channel.

Warned.

Phil Smally e-mailed me and suggested I do the
following:

1. reset the unit.
a: start over again
2. Make sure the 6 options for system are correct
a: they are easy to get wrong later on
3. Select correct system to monitor
a: mine is ED.
4. Sweet is hearing the police tac units say their
things

this system protocol, if moved, will quit the listening
pleasure. it
can happen when the TT's are accessed to go to another bank and
you don't pay attention to what is displayed. So if you accept
the
800 one which seems to come up right away, you get it and not
the
ED you want.

So, it's off the hook and I can say that the unit is working
great.

No stores in California have them yet. the 2052 according to
the
clerk at the RS I callled. yet you can buy them direct.

I suggest to all BUY DIRECT FROM RS. Go to a RS store to be
insulted, given attitudes, given misadvice and more. Just to
show
them how much you want them to make tons of money on their
commisssions, please note his name or her name and remember
it...then when you order the item from 800 Radio Shack number
remind the person on the phone to give a generous tip to
.....
name at .....for the spendid misinformation given
or the
great attitude given or the "major admission that "i dont know"
to you is appreciated.

not commissions for being so inept...but tips. then name an
amount
you think she should award this party. I suggested .35 to call
his
mother to come pick him up after his last day of work at RS.

bill conduit
as i see it

Well since we're talking about small display here, the scanner will alternate between the freq (or alpha tag) and the tone on a channel that's set for PL. It's not the end of the world but out of sight out of mind works for me in this scenario.

I should have also noted that the dispatch center for the ESP units verbally identify themselves as "NorthCom" (for I-287 & I-80).

In addition, you can also monitor them (along with several other type II talkgroups) while listening to the NJSP in Type I set-up. In that case, they will be heard on 400-12.

Hey folks...

Rumor has it that President Clinton (and other state and federal government officials) will be attending the memorial service for the six firefighters killed in Friday's devastating Worcester Cold Storage Warehouse fire. I was wondering if anyone had any experience in scanning the airwaves when the Commander in Chief is in town. I assume that the Secret Service communications will be encrypted, but maybe the Mass. State Police or Worcester Police/Fire have some reserved channels/frequencies for such an event. Any help is appreciated in finding info about the "scannability" of this sad event.

Thanks!

Track

Let's have a contest, Gil: You build a PSK31 station from scratch,
and I'll build a CW station from scratch. Let's see who can get
on the air first, and collect say, 1000 contacts.
Jeff KH6O

P.S. Let's define "from scratch" as using discrete components
from an old TV set. Note that the variable cap from the UHF tuner
works fine in a VFO; I built one for 40m.

Those are fine if you don't mind using and being *completely* dependent
upon someone else's equipment.

On the other hand, ham radio is the *only* communications medium,
outside of shouting, in which any two operators anywhere in the world,
can communicate directly without using government or commercial
communication services. Those same two operators don't even need to
purchase commercially-built radios -- they can build them themselves.

It's no longer true that HF is uninteresting commercially. Urban areas are pretty well built out with cell repeaters, the only growth area is communications away from repeater sites. Iridium has pretty well shown that putting up enough LEO satellites to get LOS coverage everywhere is too expensive, and the transceivers too clumsy. Simultaneously, new technologies like spread spectrum, data compression, and error-check coding is making it possible to get easy-to-use, good quality communications in very limited bandwidth. Presto, HF is interesting again. Especially if you can find a set of world-wide allocations at nicely spaced frequencies, currently occupied only by a financially and organizationally weak service.

Is there a dispatch simulcast for Oakland Fire? I think that I have heard it before but can't seem to find the frequency. Its really a pain in the ass trying to listen to these guys without a Trunktracking scanner. Thanks for your help.

No, let's define "from scratch" to mean "using only common stuff
you can find around most houses". Like, say, a PC and a sound board.
(Hell of a lot easier to find than a TV with nonsynthesized tuning.)

This message is just a "thank you" to all of the Public Safety Officers who risk their lives everyday so that we may be safe. You can never be paid what you're worth but the work you do is what allows us to feel confident knowing that there's someone to "come to our rescue" should we make that call.

The loss of the Firefighters in Worcester, MA is a profound tragedy and will undoubtedly leave a void in the lives of their families, colleagues and quite possibly anyone who knew them. Let us not forget the countless people who live on because of the selfless dedication of these heroes.

May we never forget all of those who given their lives that we may be free and safe.

I have a Radio Shack Pro-26 in A1 shape cosmetically and operationally and want to trade it for an Alinco DJ-C5T, dual band credit card size HT or possible another very small dual bander. The Pro-26 covers from 25 Mhz to 1.3 Ghz and does have the cell band blocked. This can be unblocked in 3 ways. One way is free and I'm told doesn't work well, another costs $60 and requires great skill and special tools and the third way is easy but costs about $180. I don't need this unit because I just bought a Yupiteru 7100. Interested parties please contact BHL at philoxeny@hotmail.com

I just returned my Pro 92 to Radio Shack this afternoon. I was very disappointed, because I really like the scanner for conventional use and it's ability to track an LTR (EF Johnson) system.

I initially thought that it was tracking the Motorola Type II system in Santa Clara, CA just fine, but when the system became very busy during the day, it started missing parts of conversations. I really wish that I had NOT sold my Pro 90 so quickly last week.

BTW, I just purchased a BC 245 XLT over the weekend and it seems to be doing much better. Just wish it could track LTR also. Oh Well.

Is there a non-trunking (and possibly cheaper) version of the pro-2066? I'm looking for a mobile version, not hand held or base. Yes I know allot of base scanners can be made "mobile" but most "mobile" versions of scanners are made to the more or less standard size of in-dash AM/FM radio's.

Message-ID: <PWg34.7005$X5.655751@typhoon.nyroc.rr.com>
Source record: 100287

I just sold the radio I was using for digital monitoring (a PRO-2006), figuring that I could just tap another scanner's discriminator output and be back in business. No such luck, at least not with the BC-235xlt TrunkTracker.

None of my programs (WinFLEX, Trunker, Etrunk, Treport, or Dumper) get any noticeable signal from the BC-235. Trunker says "want DSR" and the other programs just sit there. I've tried this with and without a 10mF tantalum capacitor at the tap point (plus side toward the discrim chip).

Does anyone know if there is a way to get more signal from the BC-235?

Someone sent me photos of the proper connection, but I accidentally deleted them. If someone wants to provide diagrams or photos of any corrective procedures, please either email them or post them to alt.binaries.radio-scanner.

I recently received the this request via email. If anyone can help out
Stephanie, please respond directly to her at: sforrest@soltec.net

Thanks.

Hi, my name is Stephanie.

I am writting to see if you can help me. I have a friend who is
disabled and homebound. He likes to listen to a scanner. Unfortunatley,
his last live in assistant walked off with his scanner. I don't have
much money, so I can't buy him a new one. But if you or someone you know
has a used one they would be willing to sell cheap or trade for please
let me know. I would like to brighten up his Christmas.

Thankyou,

Stephanie

In the past I did not sign my cards. Now I Print CHECK ID and highlight it with a color marker and then sign next to that. Even with that only about 60% of the clerks ask for an ID, but that does add to security. If you don't sign your card their signing the card will match their signature on the charge slip.

Although it's not a scanner, but a handheld tranceiver, I have a Standard C500. This appears to be a triband unit covering 2 meters, 450 and 360 to 399.95 MHz. I have not heard of any radios covering this latter freq band...anybody know what I have??

Bob

Yeah, but that wasn't the question exactly. It doesn't have a data
button on it that skips non modulated carriers. So the answer is no.

Try this. Enter a search range. Press search. Then press and hold the
limit button for a nice surprise... it does work in reverse.

I agree. Overall Uniden has really made a great conventional scanner
here. If they make a trunktracker with these features, look out - it'll
be the greatest thing since programmable scanners and sliced bread.

Go with Airborne Express. They are much cheaper than UPS and Fedex and
are extremely reliable. They always work well for me. 1-800-airborne

Right... but the SC200 does not have data skip. You will have to
lockout the data frequencies yourself.

If you push and HOLD the down arrow, it works. I have one right here
next to me (love it, love it, LOVE IT!) and I tried it just now to
confirm. Works perfect.

OK, well this radio has a squelch tail, but it's not bad.. You don't want to tighten up the squelch too much because then it's pretty deaf to weak signals. Unless you don't care about those. Even with CTCSS on, you hear a bit of a ch-p at the end of each transmission.

> There isn't much in the area of Coverage, but for its sub 200 dollar

OK well don't get your hopes up on PC control. It won't do it. It will upload and clone to another unit, which is a step in the right direction. The beauty of the uploading ability is that it allows you to create and save station programs for it and load them in a matter of minutes instead of a couple of hours. I travel alot, so this is a big plus.

Hope that helps you decide. I doubt this little guy will disappoint, I just wouldn't enter it in any beauty contests ;-)

Are you gentlemen all having trouble with the really swell "lite" opto456 board? Mine worked ok with Scan Star Deluxe. Well it scanned and stopped when it was supposed to. :-). Good news however.... I have located all the parts that were unobtainable by optoelectronics for production of the full opto456 board. They are located in their new scanner. Hmmm how'd dat happen?? Kind regards Mike Burch K8MB

I have used a PRO-2005 and voice operated tape recorder for some time. Patch directly fro the tape out jack on the scanner to the audio in on the tape recorder. Be certain to run the tape recorder sensitivity on low, or it will run continually.

On Fri, 3 Dec 1999 07:31:44 -0600, the estimable "Kent Winrich, K9EZ"
<kwin@execpc.com> postulated:

>For weak signal contacts and others ie: DX, EME, MS, VHF, Tropo, Ragchewing,
>Sat., need I go on? Sorry if you dont take advatage of CW, but a very large
>group of us do.

Glad that you enjoy working CW. Why continue making it a license
requirement though? If one wants to learn it fine. If one doesn't want
to learn it why keep them from working other modes in HF bands?

What is the average age of hams in the USA these days? What is the
average age likely to be in five years? Ten? Fifteen?

It seems to me that if something doesn't change to hook in the next
generation of hams that amateur radio in this country will be in
danger of disappearing.

Without practitioners how long do you think you'll be able to keep
your spectrum from out of the clutches of the commercial interests?

Just wondering.

Hi,

My New 245XLT is deaf, it's sensitivity measures about .75uV at 856.5 Mhz. The local PD is on a Type II Motorola system and is so weak that I have to place the scanner in a Hot spot just to get the audio out of the noise, about. They seem to be about .25 to .5uV in strength here.

I guess I will try a 10 Element 800 Mhz yagi, Maybe then other cities will still be strong enough off the sides of the yagi.

Anybody tried a Preamp?

Ron

:
: Yeah, but that wasn't the question exactly. It doesn't have a data
: button on it that skips non modulated carriers. So the answer is no.

Let me clairify it then.. I put data lockout and OR birdie lockout.
As long as the scanner will lockout any frequency while I am in a
limit search is all I need :). Say if I'm scanning between 138.000
and 144.000 There are a few things that my scanner stops on and I
have no way of locking it out so I have to keep pressing the resume
button to get past them. According to other people in here, the SC200
will lock out anything I pickup during limit search. To be honest I
have no idea what the difference of data lockout and birdie lockout
is, as long as I can lock outcertain freqs during a limit search is
all I was asking about.. :)

You're so right Phil. If this baby were a TT you'd have to kill me for it. I just got the radio today and already I like it a lot. I use it mostly to monitor CHP and a few other dispatches while on airborne "traffic watch" and it works great!!!

If there's one thing I'd change it's the alternating display while in PL mode but I can live with it. I just carry my BC245 in my flight bag and if I need her, she's there.

If you're one of those people who doesn't need trunking and can get by on 200 channels then you should buy this radio. I can't wait to get a PC control program now. :-)

The spectrum that the commercial interests are interested in
(UHF) is available to hams with a code-free license, so the
code requirement will not be the cause of any loss of freqs.

Maureen,

We found out tonight that we are going to have to baby-sit a couple of our grand children Tuesday. Looks like I won't be able to make it to the meeting Tuesday. I still am planning to come to the board meeting next week. I have included a few ideas I have from the policies we are looking at.

Loan policy: Should we waive the debt ratio regardless of the collateral? Seems it would be in the interest of the member not to let a borrower get in over their head.

Should we reword the line about "Every effort shall be made to obtain an updated, complete loan application ...." with something that sounds more professional?

Should there be a limit on how much money we loan to any member who is on disability?

Does the debt ratio formula include the monthly payment of the loan be requested?

Should there be some way we can flag all loans that don't have title or insurance papers, and some how access a penalty?

Should we have a loan rate schedule that includes the long term loan that are share secured and CD? It reads that the member can repay up to eight years. Seems we should have a higher rate as the length of loan goes past 4 years.

Should we up the dollar amount that a member must borrow to refinance a loan to keep them from just getting a lower rate when we have a rate special?

Should we rethink the policy of release of collateral? Looks like it could be a higher risk than we should subject ourselves to.

Are all staff & volunteer loans %100 looked at by Credit Committee?

Should there be a specific time when the Right to Cure is sent?

Should we add a little flexibility in the "Comp Time" taken instead of overtime pay? Maybe take the comp time within the month.

Should we look into having the employees pay a little co-pay of health insurance such as P&G employees do?

Change the automobile mileage compensation to $.31.

I have probably went to far on some of these, but these are just ideas.
Hope to see you all Sunday night.

Gary

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

Just found out that my local police and fire departments are transitioning to a trunked, DIGITAL radio system: true digitized voice. This will leave my present scanners high and dry; all you'll hear is a buzzing noise. What's more, some of the talk groups will be encrypted, so even if someone markets a "digital scanner", it won't matter, as I won't have the necessary encryption keys. I've got about 2 years left, then my nice new scanner becomes a paperweight. Bummer.

I have compared the GRE Super Amp 3001 to the HamTronics LNG-WB Pre-Amp.

Readings were taken using an H.P. 8559 Spectrum Analyzer and a Motorola
R-1200 service monitor.

The reference level was maintained at 10uV (The 8559 will not go much lower
than that) and the measurements are in db above the reference level.

Test Freq. Mhz GRE 3001 LNG-WB
Min / Max
30.00 -3 2 12
40.00 3 5 16
50.00 6 8 18
140.00 19 25 18
150.00 19 25 18
160.00 19 25 18
170.00 19 25 18
440.00 15 21 13
450.00 15 21 12
460.00 16 21 12
470.00 15 20 12
480.00 15 20 11
820.00 15 20 9
830.00 16 20 9
840.00 16 21 9
850.00 17 22 9
860.00 18 22 9
870.00 19 23 9
880.00 18 23 8
890.00 18 22 8
900.00 18 23 7

Note that the GRE is specified for 100 Mhz to 1000 Mhz. The LNG-WB is 25
Mhz to 1000 Mhz.

> Motorola Trademark name for CTCSS is. But whats this alternating
> display business???

OK. You enter in a frequency of 155.0100. Then you set the PL to 110.9.
The display will alternate between the frequency and the PL tone like
so:

First: 155.0100
Then: 110.9
Then: 155.0100
Then: 110.9
Then: 155.0100
Then: 110.9
Then: 155.0100
Then: 110.9
and so on, cycling once every second or so.

It's kind of bothersome to look at, but it works, let me tell you...
Stop by a Uniden dealer and have a look see at one. That's the best way
to see what I'm talking about before you get one.

-Phil

That seems to be about typical for the Trunk Tracker handhelds. My 245 is a tad better at about .5uv, but nothing to get excited about. My PRO-90 measured in at around .7 to .8 in the 800 MHz band. I've tested a few other PRO-90's and BC-235's and they were all in the .5 to .8uv range for 12 db SINAD on 800. They're much better on VHF/UHF, though - more like .3uv. I think Uniden may limit the 800 sensitivity by design in order to prevent overload as much as possible. With so much rf around in the 800 and 900 MHz bands these days (cell and pager sites), a scanner that was good for .25 uv on 800 would likely go into melt down in many areas. This may just be the trade off we have to live with.

58th Pearl Harbor Observance
Hello-
I need an operator manual for the AR1000 wide band receiver - I misplaced mine and the unit is tricky to program.

I also have a Radio Shack Pro-32 handheld scanner (1989 vintage). I was curious to know if there are any modifications possible for the Pro-32 to enable a wider (no-gap) coverage. The Pro-32 offered 200 channels, 30-54; 108-134; 136-174; 380-512 MHz coverage but no 800MHz.

Any comments appreciated...
Brian

P.S. The old Pro-32 radio has a MUCH better sensitivity than the AR1000. The '32 is a damn good radio but with some minor limitations.

Not only are the SS transmissions encrypted, they are transmitted in spread-spectrum - which means they transmit over many frequencys per second - simple scanners are unable to capture any of this.

5649. Ignition noise, Dodge Caravan 99

Newsgroup: rec.radio.scanner
Date: 1999-12-08 00:00:00 UTC
From: ddufault_ve2bap <ddufault@dsuper.net>
Message-ID: <82m91i$j4u$1@nnrp1.deja.com>
Source record: 100208

Ignition noise, Dodge Caravan 99

Here is my English translation of my previous posting "Bruit d'allumage - Ignition noise"• Please excuse my bad English. My interference problem is in the same category that the one of Carl Salomon W5SU, with slight differences.

I've got a problem with a '99 Chrysler Dodge Caravan whereby a bunch of trashy noise gets into the receiver portion of my 2-way HF-VHF-UHF amateur radio transceiver, an Icom IC-706 (receives from 100 KHz to 450 MHz). This problem ranges up to the UHF band, giving a reading of S5 on the S-meter at 440 MHz. Its intensity varies with the RPM of the engine on the S-meter reading. When demodulating in AM (this mode is available on all frequencies covered by the radio), I hear a trashy noise whose frequency changes with the RPM. My vehicle is brand new: 10 000 Km (6000 miles)•

The noise ranges from pulse-type ignition noise, to trashy (computer-generated?) junk. The noise has to be radiated (picked up by an antenna) and I'm not getting it from the power leads...I've eliminated that possibility by temporarily wiring the radio to a marine battery, and the noise is still there when the engine runs. It only goes away when I disconnect the antenna. The magnet-mount VHF-UHF antenna is installed on the roof at the rear of the vehicle.

I tried some other receivers. The original Chrysler radio is also much affected; I hear the RPM-changing noise on AM and I lose reception of weak FM stations with engine running. The cassette portion is NOT affected, confirming a radiated noise. My scanner receiver (connected on a 117 V AC external source) receives noise up to 1200 MHz (S-1 reading)! This trash obliterates any signals weaker than that, on each radio I tried.

I disconnected the alternator; the problem is still present. It seems it's not the fuel pump either; I tried to turn the ignition key to the RUN position, without starting the engine. No noise was generated. I built a small magnetic loop antenna (a coaxial cable looped on itself, the inner conductor connected on the shield, over a 3 inches diameter loop), connected it on the Icom receiver over a long (20') RG-58U coaxial cable, and used it to probe around the car. This revealed that the noise source is obviously the ignition system; I got a radical increase of noise with the loop placed near the cap distributor, the coil, the spark plugs and their cables. I receive a much smaller signal with loop near the computer, and nothing when near the fuel pump or its supply wires.

I visited my Chrysler dealer service center; they made some tests, most of those mentioned above (all of them are discussed on the newsgroups and in the ARRL Interference handbook). They checked the engine with a DRB tester: everything was OK. The vehicle is already factory equipped with resistive spark plugs and cables. The computer is built EMI-protected in factory. Engine, computer, and other critical components are well grounded through heavy braid. After consulting their engineering staff, they found nothing and have no idea of what to do now. My feeling is they are not familiar with the EMI problems, and don't really care about them.

My girlfriend had a cute suggestion: "Why don't you choose another hobby - stamp collection, for example?"&#65533; Hope I won't have to choose this solution&#65533; hi! I've done other mobile installations but haven't run into one as stubborn as this. Is this a unique problem to this vehicle? Any ideas? Thanks for any assistance.

I'll take this vote. I'm sick of the "fear of the crash". I have to deal with this stuff every day at work. People are so damn stupid I wish it would all crash just so I could watch all the powder puff's riot out of fear. I do feel sorry for all the cops come 12:01 though....

Ugh.. Well I can't do what you suggest, no one around here has
any, I am forced to buy over the telephone unless its a radio
shack product. I do not like the idea of it alternating every
second between the freq and PL tone, or alpha-tag.. Is that in
manual mode only or does that happen even when scanning?

I've noticed that some wideband receivers receive up to 1.3 GHz, while others such as the Alinco and AOR go all the way to 2 GHz (and the AR5000 goes to 2.6 GHz!!).

What exactly is there above 1.3 GHz to listen to??? Why should frequency coverage above 1.3 GHz be important to me?

It happens all the time. Scanning or manual, matters not. It's a minor
thing really. After all a scanner is for listening to, not looking at.
The nice thing about this radio is that the triple conversion works so
well that you rarely need PL. When you do, then well, you live with it.

I would have preferred to have the PL show next to the frequency and
not at all on the alpha mode. But that's just me. Other than that, I
love this radio.

5658. vhf Lowband Reception in North Central Oklahoma

Newsgroup: rec.radio.scanner
Date: 1999-12-08 00:00:00 UTC
From: wb5agz@dc.cis.okstate.edu
Message-ID: <Yys34.4$jb.167@news.onenet.net>
Source record: 100217

We now are nearing the peak of another Solar cycle and the 30-35 MHZ frequency range is filled with all kinds of signals from the East and West coasts of North America on a daily basis. I am curious about something which I began to notice in the last Solar cycle but which is quite common today. I began to notice a lot of Spanish radio traffic in the frequency range that starts at 30 MHZ and goes roughly to 34 or 35 MHZ. This traffic turned out on closer listening to be taxi cabs in the New York City area. What strikes me as interesting is the sheer number of frequencies that have similar sounding radio systems. They all have dispatchers who speak mostly Spanish but do sometimes speak to some of the cab drivers in English. All the systems have automatic station identifiers that appear to be of the same technical design, and all systems seem to use CCTSS for obvious reasons.

My question is whether these are all different taxi companies or some kind of operation run by one company. There are so many frequencies and they are quite similar in format.

They are common enough that if one tunes the low end of the VHF lowband in this part of the country on a Winter day, the taxis in NYC are what one is now apt to hear more than anything else.

Do people in the Northeastern US hear much from Oklahoma and Texas? If you live here, the 30-50 MHZ frequencies are pretty much a wasteland these days with cordless telephones and the Oklahoma Highway Patrol pretty much the only users of that spectrum.

Hi, I am looking for an older model scanner to buy. I am interested in the 40.0 Mhz band and the 150-160Mhx band. This is basically for listening to rural police and state police in Indiana. I found one on E-bay, but I got out bidded and the auction ended before I had a chance to react. I would like at least 20-25+ channels. I may settle for a 10 channel. It must be mobil and have a BNC connector (like radio shack uniden). If you know of anyone just wanting to make some $$ and would sell one for relativly cheap let me know. rvkeller@iupui.edu

That is true and false. It has been noticed that companies
inventories are going up due to the expected possible interruption
in supply channels. And at the same time, consumers are purchasing
survival gear and such just in case the electricity/heat goes out.

Actually, the 'duh' is pretty applicable...

With the credit card companines touting as a CUSTOMER BENEFIT
the fact that you can loose all your ID, and get a replacement card from
them that is usable STRICTLY on signature alone (AMEX will actually
threaten a business with revoking their ability to accept charges if
they hassles customers for anything other than that single card with
a signature) it's not too smart to carry an unsigned card around that
could get lost...

So by not signing your card, you've now put a blank check into a
potential thiefs hand. If the signatures match what is on the card,
tough cookies at the retail level.

Mike

When you call an 800 or 900 number, ANI goes through. That's why
places like cable company Pay-Per-View works, even if you have an
unlisted number and block the caller ID. ANI also goes through to all
E911 centers as well.

There are ways to hide it, like calling through 10-10-220....

While I think that by and large most protesters get what they deserve,
it is also clear that the police were had both poor traning and even
worse leadership. While images on the TV t do not tell the whole story,
it certainly appeared that the cops just went nuts. I doubt the guy on
the bike was protesting anything, just in the wrong place at the wrong
time, and the scenes of cops shooting people at point blank (2feet) with
plastic/rubber bullets shows that even the "good guys" can go bad.
I hope all the bystanders, residents whatever sue the local government
into bankruptcy. And that some cops go to the big house for life.

Just my thoughts, your are bound view things differently!

From: csf@duke.edu
Message-ID: <82me2h$d5u$1@news.duke.edu>
Source record: 100235

I am sure everyone is sick of newbie questions, but I would like some advice on purchasing my first scanner. My requirements are thus:
I am on the road a lot, so it must be hand-held
I would like to listen to Polics and CB frequencies
I would also like cordless/cellular frequencies

I am leaning towards a used model for price (which is important) and cellular frequencies. I am interested in some of the following models, though I am sure there are others that better fit my needs:

Realistic Pro-43
Radioshack Pro-90 (does this except cellular?)
Bearcat 230XLT

Any advice would be most greatly apreciated. Also, if someone has a suitable model for sale I would be interested. Thanks,

Craig Ferguson

The 10-10 ### company doesn't 'pass' your info. In fact, most of them,
like 10-10-220 show up as 'Unknown Caller' on CallerID. However, you
can BET they have the info on file in their computer. They have to
bill you, right?

Dan - try this website:
http://www.arrl.org/field/club/clubsearch.phtml?zip=91042&dist=20&selzip=S
how+clubs+near+ZIP+location

Follow the links to the Scanner Mods & from there you should find a link to Radio Shack's web site for specs & service etc. If you can't find it there - go to a local store and order the battery cover.

Do read the manufacturer's specification carefully. For example, my DJX-10 is supposed to work up to 2 GHz. But its pretty hard to drive a signal hard enough to hear it at that frequency. Ditto on my older Yupiteru and AOR wide-range handhelds. I don't know about the 8200. And sure enough, the fine print says the sensitivity figures are only through 1.3 GHz.

What's up there? Well, for ME, I am interested in stuff leaking out of digital comms equipment.

Cortland

From: Crazy George <munsch@attglobal.net>
Message-ID: <384fdf16_3@news1.prserv.net>
Source record: 100094

Daniel:

Which engine? One of the V6s or the 4?

You must not be misled by the fact that there will always be noise around the secondary of the ignition system in the near field. What you are suffering from is far field radiation, secondary current flowing somewhere undesired and thus radiating. One of the Chrysler 4 bangers has an extremely long cable from the coil to the distributor, and the only cure is to move the coil, which negates the warranty. One V6 is noisy, the other is less so, but I don't remember which is which. One 4 banger as installed in the Neons is exceptionally quiet because no secondary conductor is longer then 25 cm., and the coil appears to be built into the distributor. The radiated noise may not be from secondary current (low) but from switched current in the coil primary (high), but hard to detect in the presence of the high voltage secondary fields.

As an aside to illustrate: Way back, I installed a solid state voltage regulator on an early alternator to replace the mechanical regulator, and suddenly, I had ignition noise on that vehicle, or it sure sounded like it. After lengthy troubleshooting, I found that the ignition rate was causing the voltage regulator to switch the field current on and off when the points closed and opened, and the field wire from the regulator was radiating harmonics of this switching. Filtering the new regulator stopped what sounded exactly like ignition noise.

Now, about the coax probe. The shield should cover the loop, but not be complete. In other words, only a tiny gap in the shield at one place. Maybe even overlapped with a turn of tape separating the two layers. And, no more than an inch in diameter. See any text on Faraday shielding. Then it will respond mostly to magnetic fields and not to electric fields which are everywhere. Then, decouple the outside of the braid with lots of ferrite blocks, and then you may be able to better locate the source. Ignore the secondary wires themselves, unless they are overly long and dress ed poorly. Somewhere there will be a conductor, may even be one of the ground braids, which is carrying the noise current and radiating. Do all the handbook stuff, make sure there is no paint under the ground bolts, hood bolts, and things like that. And, realize that sometimes these vehicle noise problems are very difficult to locate and solve.

It's a excellent computer controlled scanner, and with the proper antenna, a fairly good shortwave receiver. However, be aware, unlike the PCR-1000, the PCR-100 does not have SSB, (single side band). Without it, you seriously limit your listening options. This is not a concern for some people. The software was actually written for Win95/98 & NT, and it works great! Software for the PCR-1000 was written for Win3.x, and gets quirky sometimes with Win95/98/NT. There is a lot of third party software on the web for the PCR-1000, most of them will work with the PCR-100 as well. Now that Icom dropped the price of the PCR-100, it's a good buy!

Anyone ever deal wth Lakeview.

I bought an On The Glass CB antenna 4 months ago. The antenna mast snapped off. I called and asked about warranty. They immediately accused me of hitting something with it, which I did not. I have two (2 meter & scanner) other antennas placed right next to this one and they are just fine. I am sending it back to them so the "can examine it" (per the manager), to see if I hit anything. Then they will decide if they will replace it then.

The antenna cost is $17.95.

Your thoughts are appreciated.

>in getting involved in amateur radio don't have ANY interest in
>learning morse code.

I agree with that also, but it is going to take a proactive
effort to bring amateur radio to young kids today so that
they even know what it is.

>And who cares about using VHF to communicate
>around town when everone has a cell phone?

Which would you rather do? Talk to a few friends
via a multistation QSO or pay for cellphone or landline
charges? I meet two other hams for a breakfast
get together every Tuesday. We chat on a 2m simplex
frequency about anything and everything while enroute
for about 1/2 hour. Why would we want to do that
on cell phones?

>With the relative ease of
>worldwide communication available via the internet I find it difficult
>to even get young kids interested in SW radio.

Even as a kid in the 50s, the amount of other
kids interested in SW radio, ham radio, etc. was
relatively small when compared to those that
were into sports, etc.

>I don't know what the answer is but I do feel that the current/future
>demographics of ham licensing in this country makes for a rather bleek
>long term scenario.

The future will be bleak if WE fail to recruit new
blood. Heck, I hear some of the same complaints

from people into model railroading, antique cars, etc.

>If folks want to work CW that's fine. It is a fun and useful mode. I
>just don't think that the attitude of many that a CW requirement
>somehow acts a "natural barrier to the riff-raff" has any credibility.

Agreed. If it served any useful purpose in that regard we'd
have fewer riff-raff on HF than on VHF. I don't see that
at all and I live in a major tri-state suburban area.

>I think a Novice class, no code license with limited HF privileges and
>a General with a 5 wpm requirement wouldn't be a bad thing. On the
>other hand even that may not be enough to get folks
>interested/involved.

Before year's end, I believe
we'll get (IMHO) a Tech (nocode), a 5 wpm General and
either one or two more higher licenses. That is the outlook
until the elimination of S25.5 from the international treaty.
It will be interesting to see if the FCC goes with allowing
nocode techs on HF CW as proposed by the ARRL in
their comments to the NPRM.

>Ham radio is more than just a hobby. It is a valuable public service
>especially in times of disasters. It would be a shame for this service
>to wither away because the "there's no corps like the old corps" camp
>wouldn't adapt in order to survive.

Agreed.

Cheers,
Bill K2UNK

Source record: 100108

The meter has a serial port, that allows it to communicate with a PC, and display various measuring results, including such things as a data-logger, taking voltage, amperage, resistance, and frequency readings, at various intervals, and writing the results to a database file.

When I try to enable it, an error window comes up, indicating there is a problem with COM2. I'm computer literate, and fully understand RS232 settings, and have tried everything. My COM2 port is fully functional, as I can use it with numerous other devices. I even tried setting the baud rate, etc., manually, and disabled FiFo, still no luck. I owned one of these meters a few years back, when I was running Win3.11, and am familiar with how they work. I really think it is an issue with Windows 98.

Thanks,
Bill

Pro Am antennas are easier to adjust. You only have to do it once.

Check out the local/state police/sheriff frequencies in your area. Usually the USSS frequencies are encrypted, especially when POTUS is nearby. But the local/state activity, especially during motorcades, sometimes on their wide area, sometimes car-car frequencies, will become unusually active. Sometimes, frequencies rarely heard will become active. Also, check the local news media frequencies. Reporters/photographers will be heading to their assignments and setting up for "the best" photo and position for the live broadcast.

Piero:
Let me just say that if you want customer service, go with Larsen. Yes they will cost a little more up front, and they might not look as sleek as some, but you can't beat the warranty. 3 years. One time I called them and said I had a probem with a dual band rubber duck, they sent me a new one and said just destroy the old one, no questions. Another time I had a coil on a 5 year old antenna crack (yes, I told them I did not have a receipt and it was 5 years old), they still replaced it free. Larsen has great customer service.

Digital is not the same as encrypted. Digital scanners will be developed some day if the market has a need. There is already talk of an APCO-25 scanner in development, which if I'm not mistaken, is digital. You might want to find out if your new system will be APCO-25.

5712. Re: Bearcat 210 book?

Newsgroup: rec.radio.scanner
Date: 1999-12-09 00:00:00 UTC
From: Brett - N7OLQ <brett.miller_nospam_@intel.com>
Message-ID: <82pb1b$vd@news.or.intel.com>
Source record: 100121

If you are talking about the 210XL it is very simple.
With the Manual Key select the channel you want to program
enter the frequency with the decimal point (e.g. 155.190)
Hit Enter
Your done! Hit the manual key for the next channel and repeat.

To set the limit search
in manual mode type your frequency (e.g. 154.000) and hit limit then type
156.000 and limit again then hit search to start searching.

All this is just from memory, so don't flame me for leaving out a step...

Do hockey coaches even use radios like football coaches? I think that because of the restricted movement on the part of the coaches (that team bench is a *small* area), all communication between those coaches behind the bench and those in the stands is done by landline.

Hockey is the only sport I go to or watch on TV, and I've never seen radios in use anywhere....

5716. Programming for FT-50R

Newsgroup: rec.radio.scanner

I have a Yaseu FT-50R, I need to know how to program it from the fron panel.

I have tried contacting Yaseu about the cost of the programming software and the data cable but they have not responded as of yet.

I am trying too figure out how to program frequencies that I want to scan only and ones that I want to transmit on.

Also does this radio handle digital PL?

Any help would be appreciated.

Please e-mail me directly at e.p.miley@worldnet.att.net

Thanks
Ed

5720. Scanning on Amtrak

Newsgroup: rec.radio.scanner
Date: 1999-12-09 00:00:00 UTC
From: Aric West <slake@netins.net>
Message-ID: <3850757B.50D6D9AE@netins.net>
Source record: 100129

I'm taking a trip in January on Amtrak and will be riding the Zephyr westbound, the San Joaquin southbound, and the Texas Eagle/Sunset Limited west.

I've got a Uniden SC-180 with a 100 channel capacity. I figured I could punch in all the AAR channels and scan all. Is this overkill?

I am also interested in any other frequencies of note along my way. I figure I could have a bank of 10 locals I could change along the way.

I am also looking for an antenna that is optimal for the 160mhz range. I imagine my rubber ducky might handle on-train conversations but not much farther than that.

Also I'm bunking in a Superliner standard bedroom. Is there enough room around the electrical outlet to plug in my AC adapter?

I have asked a lot. Hopefully it will be of interest to many.

Thanx!

5721. Re: FA GE SuperRadio III

Where do I find one?
The GE Superadio is available from many retailers, including K-Mart, Lechmere's and Costco, to name just a few. Bennett Brothers is at least one mail-order source for the radio; Street price is between $35-$55. J&R Music World in NYC also has it in stock and ships fast: 1-800-221-8180.

Refurbished radios may still be available from Thomson Consumer Electronics at 800-933-5489; price is around $26 + $6 S&H, but call first.

They are a "pack-set" version of the MT500 mid-tier portable radio made by Motorola in the early 80s. They have a larger battery supply and higher power than normal MT500s. The cost of channel elements and rechargable batteries for these radios would likely set you back several hundred dollars. These radios were popular with forestry, railroads and the Secret Service.

Hi,

I was wondering if anyone could help me.

I live in Australia and I purchased a PRO-71 scanner and it appears that the Australian scanner and the US version of the same scanner have a differenct range, this scanner only goes down to 66Mhz where as the US version claims to get down to 30mhz.

I opened the case and it had printed on the main board "800Mhz Unit", does anyone know if a mod is possiable?

Thanks,

Adam.

On Tue, 7 Dec 1999 15:29:48 -0000, the estimable "Steve"
<ai7w@NoSpam.com> postulated:

>Gerry,
> How does removing the CW requirement resolve this problem?
>It sure didn't improve things when the VHF CW requirement was
>eliminated.

I don't know for certain that it would have any effect, good or bad.

I do know that a lot of young kids that might otherwise be interested in getting involved in amateur radio don't have ANY interest in learning morse code. And who cares about using VHF to communicate around town when everone has a cell phone? With the relative ease of worldwide communication available via the internet I find it difficult to even get young kids interested in SW radio.

I don't know what the answer is but I do feel that the current/future demographics of ham licensing in this country makes for a rather bleek long term scenario.

If folks want to work CW that's fine. It is a fun and useful mode. I just don't think that the attitude of many that a CW requirement somehow acts a "natural barrier to the riff-raff" has any credibility.

I think a Novice class, no code license with limited HF privileges and a General with a 5 wpm requirement wouldn't be a bad thing. On the other hand even that may not be enough to get folks interested/involved.

Ham radio is more than just a hobby. It is a valuable public service especially in times of disasters. It would be a shame for this service to wither away because the "there's no corps like the old corps" camp wouldn't adapt in order to survive.

Without numbers (of hams) and use of the spectrum it WILL disappear.

The only thing I do feel certain about is that maintaining the status quo will ensure the demise of amateur radio in this country.

Does anybody have stats (or a URL) on licensing in other countries? Is ham radio a hobby in decline in most of the world? I have been able to find some stats for the UK and Japan (and they show a downward trend in the last few years) but not much else.

Gerry

eclectic - adjective - "1: selecting what appears to be the best
in various doctrines, methods, or styles"
2: composed of elements drawn from various source"

Sorry to learn your local police and fire departments won't
be "scannable" in a few years.

However, your scanner will not become a paperweight.
There's so much more to monitor. Here's a sampling
of the other services I scan:

business (I've enjoyed biz scanning for years)
Even with the growth of Nextel digital systems,
there's oodles of analog bizcomms to monitor.
Mall and store security makes good listening
this time of year.
military and civilian aircraft
army comms at the local army reservation
marine traffic on the Illinois River
federal govt.
hams
VHF-low band skip, especially mil comms
FRS - FRS usage is exploding

You can also monitor railroads, buses, taxis, milsats, reporters
traffic copters, etc.

I often learn of fires and other events because the local taxi
drivers radio them to their dispatcher before they are
dispatched on the public safety freqs.

Technology won't kill scanning, but government regulation could.

VERY well put Bob. If we want to hold on to the right to be informed about what's going on in our community we must stand our ground. While I can't argue with encryption of tactical information I beleive dispatch calls and non TAC calls must remain available to the citizens. No one should lose the right to know (in real-time) what's happening in their community.

The regulation should be placed on the municipalities to keep information pertaining to "public" safety, public.

For example, where I live there is a liquor store nearby that gets robbed at gunpoint (in broad daylight) on a regular basis. The armed suspects often run through my neighborhood while my children are playing outside. The police have NEVER and will never advise me of this danger. I am only able to protect my family because I monitor what's happening and take the necessary steps to protect my family. My city OWES me this access to information. I should not have to hide just because I hear the Sheriff's helocopter. Any agency that takes this information away completely has SOMETHING TO HIDE.

Well, yes, that may be, but apparently I have much different standards on how I treat people, particularly those whom I don't even know. But I'm not surprised, given the general lack of courtesy in society these days.

I spend a lot of time on Usenet, and every day I see examples of people overlooking the obvious. Sometimes, I'll reply, but I don't use words like "duh". What would be the point, besides elevating my own ego because I know something that they don't?

A paperweight? Nahh. Only if you think it's only good for listening
to POLICE and FIRE.

There is so much else out there to monitor with your scanner... How
about commercial and military aero communications? County police,
fire, and ambulance departments as well as surveillance frequencies
that haven't gone digital yet. Local utilities and public works.
Amateur radio repeaters. Maritime comms (if you're near water). Etc.

Regards,
John

Don't forget the PRO-60, the last RS handheld to receive 225-400 MHZ. I've seen some sold very cheap
here and on ePay.

Hey your right!Actually I don't see the resemblance,because the 245 can
Trunk and Conventional at the same time,the 94 can't.The 245 can track
Motorola VHF,UHF and 800,900 MHZ.Don't the 94 just track 800 on Motorola?But
they both Track EDACS.

GRE = General Research Electronics

GRE has been making scanners for a long time under
various labels. GRE holds scanner patents and manufactured
models like the popular Radio Shack PRO-2004/5/6 and the
old Sears card programmable and SBE Optiscan models.

>they both Track EDACS.

The PRO-94 trunks on VHF, UHF and 900MHz as well as 800MHz Motorola and EDACS.

Plus the PRO-94 doesn't have the poor selectivity in the Marine band as Bearcat does! I owned a Bearcat and listening in the Marine band was impossible because of the pager and police comms coming in only 5KHz away (and the transmitter was 10 miles away). Also, had a BC9000XLT and MilAir was difficult to listen to becuase of all the Cell Phone images appearing in the MilAir band. And finally, the PRO-94 doesn't have a birdy on 128.000MHz like the BC9000XLT. 128.000 is Dover Approach which is a must listen to for me as I'm a pilot.

Sorry, the PRO-94 isn't a Bearcat, its Much Better.....

Hi Kurt,

I would be much more interestd in the noise figure, IP3 and dynamic range specs of these amps. Gain is easy to come by, and anything over 10 dB or so is all that is needed to overcome feedline loss and set the noise floor.

Dale W4OP

The information gathered is a good starting point, but can be misleading.

If you wish to compare RF performance of such devices, your data needs to include two more EXTREMELY important values:

NOISE FIGURE - gain is not to be had without adding noise. Simple put, the addition of noise to the link places a limit on the low end of the dynamic range, i.e. the absolute minimum discernible signal.

IMD performance - at the other end of the dynamic range scale is the BIG SIGNAL performance. Typically, wideband amplifiers are exposed to huge signals from TV and FM broadcast stations. If the amplifier has a low IP3, for example, the front end of a receiver will get nothing but garbage from the pre-amp.

Sorry Kurt, but you need to present the WHOLE picture when talking about amplifier performance, otherwise you are misleading those who don't know any better.

Gary - KG5NM

NYC taxi's are owned and operated by many different companies. Aside from the medallion (yellow) cabs which are licensed to pick up people on the street, there are a host of livery services which are only supposed to respond to phone requests for pickups. These are probably most of the ones you are hearing on low band in Spanish. The message is usually asking the car closest to the pickup point to pick up a specific person at a specific address and take them to another specific address. In addition, the price of the trip is usually told to the driver in that call.

Happy DX'ing.

'Answer in 2 words: "Nuclear Power."

A man with a gun, I can deal with. A suicidally-underscrutinized industry, capable of global devastation with a single cascading failure, built at public expense and with all other liablility borne entirely by the public, is another story. In my area, the emergency management agency doesn't even know what a thryoid blocker is, nevermind how, when or why to issue one to the public--and this just weeks before, well, "you know what."

Six months ago I would have, tongue-in-cheek, recommended, say, Mars, as a "safer neighborhood." Sadly, since that time, NASA has crashed the deep space probe, "Cassini," there. It scattered 76 lbs of Plutonium, (roughly 8 times that required to give lung cancer to the entire human race,) across the Red Planet. (Did I mention that the type of rocket booster that launched "Cassini" has a 1-in-12 record of blowing-up on the launch pad?) "Safer Neighborhood Fact 4": Cassini was originally slated to pass within 45 miles of Earth while "slingshotting" off our gravity well. The hue & cry from a few INFORMED (note subtle association with the scanning hobby,) members of the public FORCED said public agency to move Cassini's trajectory out 400-odd miles farther away, all the while complaining about the "paranoid" public (intentional, subtle broadside of Mr. Netherland's previous.) Paranoid public tragically vindicated only days later as 45 mile "slingshot" maneuver proves too close to planet Mars, which receives its first global catastrophe, at the hands of those we trust to keep us safe.

Our closely monitoring, indeed policing, every segment of our government and industry have become survival requirements for our species. Holding a Top Secret clearance can teach you to be paranoid. Holding a Mensa membership can teach you that not everyone you must trust to use their brain, appears to have one. Holding your firstborn can teach you that life is precious, fleeting, and worth being zealously protected.

Taking your own advice, you may want to talk to your real estate agent about property currently being parceled-out on some of the more fashionable moons of Jupiter. (Of course, NASA is planning several more plutonium-bearing space-probes, so, dress accordingly.)

Love & kisses,

Anthony Frost

PS. For those of you rooting for life on Mars, you may be interested to note that the most recent Mars probe has just "vanished," without a trace. (Has Mars adopted Reagan's "Star Wars" missle defense idea? If not, they probably should, before NASA "studies" them any further...) Remember, Kids: "Stop. Look. And Listen."

Jim,

It will not allow it in the scanning mode. However, if you get
out of the Trunking mode, you can still hear the conversation on
that frequency (conventional mode). Little bit of a pain going this
route but might be worth the effort. ;-)

Robert

Source record: 100048

First, I need a new battery pack for my 3000xlt. Cells are bad and circuitry too. Plan on adapting the bad pack for emergency AA's. Where can I get a complete battery pack at the best price? Second, I may have a problem with radio it self. If so where can I send it for repair? Do not (for true) listen to cell, but I would hate to send it for repair and they block it out. I paid for it. Third, has any one wired a second power port on the radio itself ? Would like to power the radio without charging the battery pack. Thanks, Jim

I was looking at the PRO-92, because it had a lot of cool features, but unfortunately sounds as if it's not making the grade. I am looking for preferably a mobile mount scanner, with CTCSS, trunking capabilities, and if at all possible Alpha tagging for freqs.

I know it is asking alot - and probably nobody has put all this together yet, but maybe if someone knows of something coming out, or maybe something I just don't know about, they could help me out.

Thanks in advance for your time.

Over the last year or two, I have noticed more and more assistant coaches with earpieces or mini boom mics. In a recent game, the coach himself had one and the colour commentator (Mike Keenan, in fact - ex coach) pointed out that it was odd for the coach to be using it as normally the ass't would have it. He said it was for talking to other coaching staff not on the bench, including spotters up above the surface keeping an eye on what the other team is doing with shifts and so on. I was just curious if anyone's picked them up.

-A

ps The coach (wish I could recall which it was) was using an up-the-sleeve surveillance mic clipped to his watch strap -- must be why you didn't notice! =)

>The 235 did not alow you to listen to "car to car" as I was told. Does the 245 allow this?

It depends on what you mean by "car to car." If you mean can you listen when the police are using the "private call" mode then no, you cannot, unless you switch out of trunking mode and scan conventionally until you find the right frequency.
However, not all agencies have the "private call" feature on their systems, and even if they have it not all officers use it, even when they probably should.
Here in the Tampa area the deputies use disaster and special events talkgroups almost as if they were CBs. They talk about all kinds of stuff - criticizing superiors, bitching about overtime, passing rumors about suspects and lots more. The 245XLT tracks these conversations perfectly.
More "official" conversations are held on the "info" and "tactical" talkgroups. Even here, though, some of the information passed is pretty sensitive stuff.
What you hear with the 245XLT is more dependent on how the officers use their system than it is on the features of the 245XLT.

Wait until a favorable review is printed in Monitoring Times Jan issue, then sell it to some less informed person who reads it.

Do not mention the BC245 as an alternative, it may lead to someone checking the Uniden radio out and wondering why everyone likes it so much.

Good luck trying to dump the Pro 92.

Yes Doug, I do that now. I was not the one originally with the customer service problem, another person was, I was only replying to their post. I had a bad experience with Lakeview employees (owner?) at the 1998 Dayton Hamfest and I will never deal with them again! He was rude and ignorant. The others working behind the table said he was having a "bad day", but he didn't have to take it out on me.

Try Metrowest for batteries. http://www.metrowestscan.com/ their site is a pain to navigate, but they have some cool stuff.

If you bought a UBC3000XLT with cell coverage, it has a different processor inside, so they can't block it without putting in a new processor in it. I don't think they would anyway. They (the Uniden repair center) really don't care. The only guys who care are the ones that have to apply for FCC approval. If it is the European version, you'll want to make sure the US repair center will take it. Otherwise call Scanners Unlimited - they do mods and repairs.

I've never tried the extra power port. What I do is use a bad battery pack! I have a pack that will no longer hold a charge, but works if the adapter is plugged in. So I run the scanner plugged in and don't have to worry about overcharging the bad pack. I've left it plugged in for months with no problem - it doesn't get warm.

Brett - N7OLQ

Sorry this is not a "specific" answer to your question, but I hope it helps. On crisp early mornings and late nights, I hear BWI's aviation is Southern Maryland (south of DC) which I believe is a greater distance than Towson. I can regularly hear the planes on approach since they are already in the air.

5812. Re: Programming for FT-50R

Newsgroup: rec.radio.scanner
Date: 1999-12-10 00:00:00 UTC
From: Bill Smith <bs@BSartist.com>
Message-ID: <82s72b$9q3$1@bgtnsc03.worldnet.att.net>
Source record: 100091

For front panel programming, you should get a manual from Yaesu by calling their parts dept and ordering one. I think it's about $7.
http://www.yaesu.com and look for the phone number for parts.

For software and cable the only thing around for sale is from a company called RT systems. You can get that from a place like HRO (http://www.hamradio.com) or AES (http://www.aesham.com)

As for scan only and transmit programming... the FT50 does not have any banks. It has 100 channels and 4 or 5 limit search channels.

Program in each frequency that you want to scan *or* transmit into as many channels as it takes. If you don't want to scan the ones that you transmit on, then set that channel to skip with the "skip" key.

If you want to scan all frequencies between an upper and lower on (called limit search) plug in the upper and lower bounds into L1,U1 ; L2,U2 etc. You should make sure the frequency STEP is set properly for the band your searching.

Hope that helps.

Bill -n2asa

This is the distinction between those who don't mind relying on
other people's equipment for communication (telephone and computer
users), and those who desire to only be dependent upon radio wave
propagation.

Wanting to get those whose communication needs can be met with telephones
and computers interested in ham radio seems like a silly proposition.

>system. Thanks in advance for any help.
>kevin.mellon@snet.net

San Diego Police and Fire Departments are both on a Motorola 800MHz trunked radio system. That being the case, there is no "real" active frequency or channel since it's constantly changing. If you don't have a trunktracking scanner then just enter the frequencies and lock out the control channel.

With that in mind, here's the list of frequencies that are used:

856.025
856.050
857.000
857.025
857.050
858.000
858.025
858.050
859.000
859.025
859.050
860.000
860.025
860.050
862.050
862.100
863.050
864.050

If you want the talk groups let me know. Also, keep in mind that Chula Vista PD/FD and La Mesa PD share this system as well.

If you're interested in listening to the San Diego County Sheriff's Department... well, sorry to say you're out of luck for now. They were quite paranoid about people being able to listen to their communications so they went digital. It's only a matter of time before a digital scanner comes along though, but it may be a while.

Source record: 99945
Cross-posted to: alt.radio.scanner,rec.radio.scanner

That is an odd question for this newsgroup. May I suggest you subscribe to 4phun-radio@onelist.com for tips on acquiring and using clip art for RTF email posts or WEB pages. Images sent with email messages to that group can be saved and used in Web pages if you desire. 4phun-radio@onelist.com is an advanced email list for various high tech topics and most of the email coming trough that list is in RTF or HTML format.
Most users on that list use MS Outlook or MS Outlook Express as email client programs.

When you are viewing any suitable web page you can save art from it by selecting the image with the mouse and right clicking to get 'SAVE AS' option. You can drop art from a WEB PAGE into Outlook Express if it is set to post in HTML format. To do that merely select the art by dragging over it, selecting copy while it is selected and then paste it into the new email message. DO NOT CLOSE the original WEB PAGE until you finally send the email for this to work properly. OE must be able 'to see' the original picture or clip are.

If you come over and join 4phun-radio@onelist.com please keep the clip art and pictures to a minimal amount that enhances the email experience as large pictures annoy most members of the list. Big pictures make email messages too large and email too long to download.

I just ordered a BC 245 and was wondering about programing it. Is hooking
it up to the modem and downloading the freqs the best way? Or should I
just search myself?
Thanks much,
Russ

you can email me direct or post here.

>Does anyone know the specs (diameter, threading) for the screw antenna
>connector used on Motorola "business band" HTs, such as the Radius SP10?

It's an SMA connector, but the threading is just ever-so-slightly modified.
MOST SMA connectors will go into the jack on the radio, but you'll be
slightly stripping the connector on the radio since it's not an exact SMA
on there. The only connector I've used that worked fine was an
SMA -> TNC connector but I forget who the manufacturer is. If I come up
with it I'll let you know. There's a few SMA adapters I've tried that also
didn't exactly match. You've got to be careful since you'll strip the
connector on the radio.

Regards,
Tony

Hello,

What is the offset on commercial repeaters located in the 151-156mHz
band? It is the same as the 144-148mHz ham band, + or - 600kHz?

Thanks,

Jim....

Source record: 99954

I don't think there is a common offset for the repeaters on 151 Mhz.

We have a repeater here in Campbell, CA on 151.625 with the input on
154.600. The Taxi Cabs that are allocated to the 152 Mhz band and
157 Mhz band are half-duplex and have an offset of 5.260 Mhz. The
old Mobile Telephones that were allocated to the 152 Mhz band and
157 Mhz band were full-duplex and also had an offset of 5.260 Mhz.

Let's see.

That's kind of hard to believe, since for the past 30 years, RS has run out of their yearly catalogs about 1 week after they get them in, and they would not get any more until the following year.

I could beg, plead, but nope, no catalog.

I Live in Polk county Florida, I am monitoring a new 26 channel trunking system to County has purchased for Public safety, If I am close to a tower I have no problems. If I move away from the tower I still receive a good signal but an annoying static accompanies the signal. Is this caused by other simulcast sites broadcasting at the same time? I think I am receiving the signals from multiple sites and the static is actually distant sites that are received as static. any other possibilities?

Hello all,
I have a completely VIRGIN Uniden Bearcat BC200XLT scanner for sale
this radio HAS NOT BEEN MODIFIED in any way
I have the manual,antenna,ear plug,DC car adapter
Wall wart charger,Three(3) batts,this AWESOME leather swivel case
that looks new and is very well built kinda like a Motorola portable
case, and a motorola converted spkrmic speaker which comes in really
handy
this is one nice radio but I have no use for it as I am trunked here
I would like $200 for the radio
For Pictures or more info
please contact
2nzster@netscape.net

Thanks Tiny

Hello big world,

Jon Foster <therealms@att.net> wrote:
> I'll take this vote. I'm sick of the "fear of the crash". I have to deal
> with this stuff every day at work.

I'm no doctor, but I did work at a fancy resort on a island and I'd say you need to take a little breather. We're like rubber bands you know, and some of life's challenges streatch us a little more than others. The trick is to streatch back to our regular selves at the end of the day.

Taking a break thruogh the day helps... lots of solutions available. I personally wear my goofy fishing hat to remind myself who I really am. None of this will help if you have problems at home... add a little Love at home if needed.

Oh, lest I forget... we have something for your bloodshot eyes, sore back, and battered mind. Take a breather, relax back in your chair and please visit our little stress-free oaisis on the net at www.cobol-man.com Tell a friend:)

We can make a difference,
RB

In article <3851B3F7.38777C66@cris.com>, Frosts@cris.com says...
>
>Does anyone know why RS handhelds no longer receive 225-400MHz? Is there
something I should know???
>
>Anthony Frost
>

I think it was because too many R/S scanners picked up Cell images in the
MilAir band and R/S was taking some heat from it.
